In Single Comb Brown Leghorns Herman Rickoff, Occidental Bldg., Indianapolis, Ind., had one of the greatest strings that has ever been shown at Indianapolis. He was awarded five firsts in this class, and the class was good throughout, but the quality of browns shown by Mr. Rickoff, not considering the winners, is worth special mention in this report. He is one of the breeders who has been fortunate enough to secure the correct color of female on back, wing bar and body, without spoiling the color effect of the breast or neck. In addition to this, he has been able to produce a strain of Brown Leghorns that are Leghorn in type, having the correct length of legs, with good combs and well finished tails. In fact, it is doubtful if the White Leghorn breeders anywhere in the country can show ten birds that will equal the type of the ten entries of Mr. Rickoff's at Indianapolis. The color scheme needs no introduction to the majority of Brown Leghorn breeders because they all know that Mr. Rickoff for years has raised some of the best pullets bred in the United States, but it is only for the last two years that he has gotten his cockerel line up to this high standard. The fact that he won first cock and first cockerel in the show demonstrates that he in coming on this line as well as the other.

Were we asked to name the best pen in the show, all breeds and varieties competing, we would hand the honor to the Blue Ribbon Poultry Farm, Columbus, Ind., on their Single Comb Black Orpingtons. Carl Carter put in two of the best finished, best shaped black pens that we have ever had the pleasure of seeing in a mid-summer show. Regardless of the fact that the females were pullets, and were up to or very nearly standard weight they were nearly free from purple in any section. In fact, they were a wonderful exhibit, and such that all Orpington breeders are striving for in shape.

NOTES OF INTEREST

The Indiana Fanciers' Association were compelled to change the dates of their exhibition. The Miners hold their convention in Indianapolis, and have a long lease on Tomlinson Hall, and it was either change dates to accommodate them, or lose the Miners' convention, so the dates were changed from the first week in February to January 10th to 14th. We understand the same judges that have been listed before will be employed, provided they can be secured on these dates.

At the meeting of the Indiana State Poultry Association, held in con-

It Is Invaluable As a Show Conditioner

Marysville, Mich., Sept. 22, 1915.

The R. T. FRENCH CO.,

Rochester, N. Y.

Gentlemen:—I have every reason to highly recommend **FRENCH'S POULTRY MUSTARD**, for we feel it is a necessity to obtain the best results and to keep the fowls at their best all the time.

Our Red Speckled Sussex are naturally a very vigorous and hardy, quick-growing breed, still no harm, can come from the constant use of your Mustard, but unquestionably all fowls derive much good from it. It is invaluable as a show conditioner, as it adds beautiful luster to the plumage and tones them up in the close confinement. Our Sussex stand today as evidence of its worth.

Very truly yours,
(Signed) H. H. COBURN,
Owner and Manager Red Sussex Farm.

But that is not all. Hundreds of other satisfied poultrymen emphasize its distinct relation to an increased egg production. Capt. Ralph Allen, Herts, England, proved this conclusively in 1909-10 when he made six pullets lay 13½ dozen more eggs during the six winter months than six other pullets fed the customary ration. Figure the additional profit for the six Mustard-fed birds. Full details and other interesting information is in a 32-page booklet which will be sent free for your dealer's name.

The Cost of Feeding French's Poultry Mustard Does Not Exceed 10c Per Hen, Per Year

THE ORIGINAL POULTRY MUSTARD IN AMERICA

nection with the State Fair, the question of exhibiting at Frisco in carload lots was discussed, and a committee appointed to meet with the other live stock breeders to see what arrangements could be made in regard to appropriation made at the last Legislature to take care of transportation charges. Later this meeting was held, an as usual, the cattle men predominated, and so much was voted for live stock that it is a question whether there will be anything more than local exhibits from this state. It is, indeed, unfortunate when a few cattle men can come into a convention and demand transportation charges be paid on their entire carload, and secure a majority vote along this line, and the poultrymen be turned down when forty of the prominent exhibitors of the state only ask that charges be paid on one car for the entire exhibit. As it stands at this time, it would be impossible for the poultry men to go through with the plan they had originally worked out of shipping all in one from Indianapolis. However, should the foot and mouth disease continue to stir up trouble as it looks now as though it might, and the cattle exhibit is called off, as seems likely, then the poultry men will go through with the shipment as originally planned and send 1 or 2 cars by express. However, there will be several exhibits from Indiana, regardless of whether the money appropriated by the State is available or not.

* * *

Mr. Ralph Woolery, he of White Orpington fame, introduced a brand new pullet at Indianapolis this year. Ralph is one of the good-looking kids who has lived a life of single blessedness, and everybdy imagined that he had escaped for good, but the second day of the show he came in introducing Mrs. Woolery, and he certainly made a wise selection. She promises that she is going to take just as much interest in the White Orpingtons as Ralph does, so you fellows who have been figuring that you only had one to beat at Bloomington will have to wake up to the fact that there is a partnership now that will make the combination all the stronger.

* * *

The poultry press men found the State Fair to their liking, and were well satisfied with the business done here. We understand all of the papers were fortunate in securing quite a lot of advertising, as well as many subscriptions, and Indianapolis being blessed with good hotels, none of the boys had to sleep on the streets.

* * *

Among the many prominent breeders who were in attendance in Indianapolis at the State Fair, it seemed to be the general impression among all that the severe criticism of some of the breeders that has appeared in two of the leading poultry journals is calculated to injure, rather than improve the business. The question of right or wrong is never decided by the statement of one individual nor by any number of individuals on one side until the other side is heard, and a constant harping on the same subject, without any reply from those who are being bombarded is not taken seriously as proof, and we trust for the good of the business in general that this system will be discontinued.

* * *

The poultry men are having a hard enoungh time to get their feet under them after sixteen months of the hardest times that were experienced in the past twenty years, and we want every bit of confidence that we can possibly instill into the minds of the breeders and anything that is done or said that will have a tendency to shake this confidence is felt by everyone to a greater or less degree. Let's boost the game, not kill it. I venture the assertion that there are more good, clean, honest fellows engaged in the poultry business today than there are in any line of the mail order business, considering the numbers of men who are financially interested; in fact, most of them are known to the writer, and to thousands of others, and they are men whom you are proud to meet, and to know. They are men that you can trust, and do trust. Nearly all stock is shipped on approval, especially when anything like a respectable price is paid for it, and if birds are returned immediately when not satisfactory, the money, less expres charges, is returned. Every reader of this paper is safe in doing business with the breeders who are advertising, and have a reputation at stake. We canot impress too strongly on the minds of newspaper writers that the less that is said to stir up dissatisfaction and to cause would-be purchasers to mistrust the business, is best for the business.

* * *

The printer must have had a night off before setting up the copy submitted by me for the September issue. In setting the copy around a cut on the same page, he was unfortunate enough to transpose several lines so that there is no sense in the article on the old timers, but he has promised to be real good, and not take in any water melon festivals, so we trust this copy will appear all right.

CONFIDENCE

In the value of "Everybodys" advertisements has been created by the class of its advertisers and its subscribers. When writing advertisers, mention "Everybodys."

For Sale--Poultry Farm

Consisting of thirteen acres good farm land, two dwelling houses—large home place, well shaded and six room tenant house, brooder houses and barn. Ideal location, shipping facilities unequalled. EVERYBODYS Belgian Hare and Pet Stock Department

ANNOUNCEMENT TO BELGIAN HARE BREEDERS AND THOSE INTERESTED IN THE SAME

Everybodys Poultry Magazine has made arrangement for me to take charge of a Belgian Hare department in their journal, and a few preliminary remarks may not be out of order at this time.

As introduction to the readers of this magazine, will say I have not heretofore contributed to this journal, but have to numerous other poultry and farm papers on the subject of the Belgian hare, having constantly raised these interesting little animals for over fifteen years; and in this length of time have sold many thousands, shipping as far distant as Eagle, Alaska, a distance of 6,000 miles.

I have been Belgian hare editor of the American Poultry Advocate since 1903, and in the meantime have contributed the article "Belgian Hare" in the Cyclopedia of American Agriculture, as well as having written two books on the subject viz.; "The Belgian Hare for Pleasure and Profit," and "A. B. C. of Belgian Hare Culture." These books are in reality text books on the raising of Belgian hares.

In taking charge of this department I shall endeavor to furnish an article treating on some branch of the industry each month.

The writer knows there is much interest in the Belgian—the business rabbit of the world, as in the spring months my mail contains in a single day from 40 to 50 letters of inquiry concerning them. I expect in the near future to offer prizes in the shape of fine does and bucks valued from $5.00 to $10.00 each, for contributions on the raising of Belgian hares, and I will expect to receive a number of articles from breeders all over the country.

I will announce later in these columns the conditions respecting the contributions and prizes.

Although having been in the business for the length of time that I have, I do not begin to "know it all" about Belgian hares, as any one who will keep his eyes open will learn new things every day, therefore I desire the co-operation of all breeders of Hares from all parts of the country, so as to make this department as interesting and instructive, if not more so, than any other department of its kind anywhere.

I trust I may receive your help.

U. G. CONOVER,
Belgian Editor, Cozaddale, Ohio.

BY WAY OF INTRODUCTION

Jess McCulley

WITH this issue of Everybodys we come before you, to some as an old friend, to others as a new one to whom we hope from time to time to be classed as old friends. We would like to meet you all face to face as friends fanciers and breeders, and as time goes on we hope to have the pleasure of meeting quite a few, as we will attend quite a number of the leading shows, and table shows throughout the country, and you will always find us around the rabbits. We are a rabbit man, first, last and all the time and as we come before you each month we will try and tell you some of our experiences in the past as breeder, exhibitor and judge, what we have seen in the home of the breeder as well as the show room, When we say rabbit, do not think just Red Belgian Hare any more than when the chicken fancier says chicken. He does not mean just Barred Rocks, but all kinds of fancy poultry.

Do you know that there are about twenty different varieties recognized by the National Pet Stock Association who now have close to over a thousand members in almost every state and new branches being formed almost every week, the object of these branches are for the fanciers of one neighborhood to get together and hold old fashioned experience meetings, telling each other what they have and how to better the same.

The Red Belgian has for the past few years been synonymous with rabbit, and when we heard some one speak of his rabbits we naturally thought Belgian Hare. But such is not the case any longer, for his bigger brother, the Flemish Giant, has given him a merry chase and today you will find as many if not more raising the Flemish than the Red Belgian, while if we go west of the Rocky Mountains you will find that those beautiful buff or red New Zealands, have climbed to the center of the stage and are holding first place, and they are rapidly gaining ground throughout the east. As a meat rabbit they are unsurpassed, quick to take on flesh and not near so great an eater as the others. Then their beautiful color takes the eye of the fancier as well as novice. So watch the New Zealand, the coming rabbit, as a general purpose utility animal he cannot be beaten.

Then the German Checkered Giants, the large Albino pure white Flemish, Angoras, Himaliah, Polish, Dutch, Imperials, Blue Viennas, French Lops, Havannas and English all have their admirers, and are all now being raised quite extensively, as variety is the spice of life. The different kinds of rabbits is what has given it such a boost and interest in the past few years. If there were but one variety

U. G. CONOVER, Ridge Ave., Cozaddale, O.

of poultry would you find a poultry show held in every county and the interest still growing? And is not each poultry association now annexing a pet stock department to same? and where held in addition with the poultry exhibit, do you take notice where the crowd is found? Look at the last meeting of the Ohio State Fair: the crowds were always around the rabbit display, until the judge had a time placing the awards. Columbus branch of the National Pet Stock Association now has about 125 members of live wires; all raising rabbits, and all better than the other fellows. So you see the rabbit business has come to stay and more getting in it each day.

To the beginner, we say, do not make the mistake that you can get rich in a few weeks raising rabbits without work, as it takes hard work to succeed. If you want to have better stock than your neighbor, it is as much in the work and care as in the blood, and do not make the mistake of trying to raise too many. In the past the rabbit business has been misrepresented more than any other branch of the fancy. For instance, they will tell you of sixteen to twenty pound Flemish Giants, where, as if you have them that go over twelve you have a big rabbit. Then they will tell you they will breed eight and nine times a year and have from six to twelve at a litter. Well, they will; but then what have you got? Just puny rabbits that have no vitality and die off at six to seven weeks old.

Do not breed your doe until six months old, any way. Seven to eight is better. She will go thirty days before kindling and then if she has over seven kill the smaller ones down to six and let them run with your doe until eight weeks of age any way. Do not breed you doe again until after you wean your rabbits. That way you have strong vitality and large, healthy youngsters. The above will apply to all varieties of rabbits.

To the beginner we advise to get as good stock as he can afford, but not high priced prize winning show stock, but something good, sound healthy fellows; and then expect to give them good care. Keep your pens clean and rabbits free from dampness and rain and a draft, for if not, they are easy to contract colds, and when once contracted, it is hard to get rid of. But if kept in the dry and free from drafts, given clean water and feed they soon grow to know you and do well. Good specimens now sell from $1.50 to $25.00 each, according to age and quality, and there is always a market for the better ones, as quality rabbits are in demand. We never had an extra fine one of any variety but what some one else wanted that particular one and at a good price at that.

They are not hard to raise and eat as well in the dark as the light, and if given the care that you would any other animal, you will find that the return in financial profit is much greater.

We will be pleased to hear from any one wishing any particular information as to any breed or variety and will answer same thru this page. Write us questions; as what may seem simple to you may be a stumbling block to others. Tell us your experience, and if you fall down, get up and start again. Did all the eggs set this summer under the old hen or the new incubator make prize winning chicks this fall? How many failed to even hatch? How many died under ten weeks of age? and how many had to go to the butcher? Were they discouraged? Sure not. Well, neither should we be if we lose a litter of rabbits or if they are off colored. Just try again, and when you do succeed, say I told you so. Now see what we got; we have been breeding rabbits for the past fifteen years, have fell over quite a few stumbling blocks but we always got up again and are still going on and people we have not seen for months when we do meet say, "Hello, Jess; how's the rabbits?" But at one time we only had one pair and that pair were both bucks but we were not discouraged and went on. What we did you can do also, and we will try and tell you from time to time how we have done it.

The Wilson Co. Poultry and Pet Stock Association will hold its fifth annual show in Fredonia, Kan., November 29 to December 4, inclusive. E. W. Cook will place the awards by the comparison system. The association has a very large list of members, numbering nearly all the poultry breeders of Wilson county. The association, with the co-operation of the Fredonia Commercial Club, conducts a "Boys' and Girls' Poultry Contest." The officers are: H. E. Bachelder, president; T. F. Brown, first vice president; Mrs. Perry Myers, second vice president; Karl F. Spellman, secretary-treasurer; Walter B. Long, assistant secretary; J. W. Timmons, superintendent; A. K. Sell, assistant superintendent; board of directors, C. V. LaDow, D. A. Pryor, E. H. Inman and F. H. Church.

(By Alliene Dechant)

What a lot of joy a little baby can bring into the hearts of ordinary and commonplace folks as well as into the very heart of hearts of folks whose lines have fallen in places of much wealth.

We came home from Philadelphia a few evenings ago on the 6:10 train, tired, hot and not a bit enthusiastic about anything. Late hours and a glorious two days of unexpected pleasures, had proved too much for us and a tired feeling resulted.

At one of the stations near Columbia a young couple boarded the train, accompanied by a most attractive little tot.

Smiles seemed to radiate from many of the tired faces and necks were craned in an endeavor to catch a glimpse at the little one. And to the surprise and delight of everyone, the little toddler tried to walk up and down the aisle. She stopped beside middle-aged man who, surprised at the the little tap on his coat sleeve, turned. The very next instant he had his arms about her and the smile on his face was well worth seeing.

A prim lady sat in front of us and we were interested to see whether would notice the child or not. We were not surprised to find that she was not fond of children, but she finally redeemed herself in our eyes by picking up little Miss Irresistible, when she happened to fall directly in beside Miss Prim.

Old men, grandpas, no doubt, young men, Miss Prim as well as the many Misses Lovers of Wee Folk, smiled. In fact, several of the latter coaxed the little one to their laps, where they kept her as long as she deigned to stay.

15 CTS. a Bushel!

For Best Egg-Making Feed—Fresh Green Feed That Makes Hens Lay!

Get the Facts! FREE

Cut in half the high cost of hens' living this winter! Sprout grain in a Successful Sectional Grain Spouter—the best grain sprouter ever made—the leader of them all! Make three bushels of fresh, green, egg-*making* feed from one bushel oats. Makes winter hatched chicks grow amazingly. They reach market size sooner—when prices are highest. Begin to lay earlier. Makes idle hens lay just when eggs bring top-notch prices.

"SUCCESSFUL" Grain Sprouter

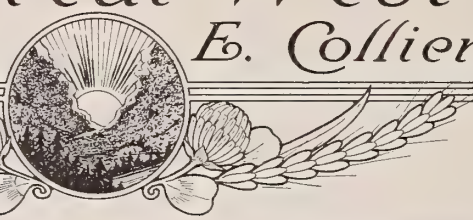
(*Made in Sections*)

Capacity from 50 to 600 hens. A big money maker for both little and big poultry raisers. Gives each just the size each needs. Grows as your needs grow. Built in all-steel sections. Double steel walls. Positively fireproof. Can't warp, shrink or swell. Food cannot mould. Large glass doors—metal trays. Lasts practically forever.

Learn *more* about this big money saver. It sprouts oats or wheat in 24 hours. Gives an inch of crisp, green sprouts every day after that! Write for full details. Do that today. Also send 10c for booklet on proper care and feeding of chicks, ducks and turkeys.

Des Moines Incubator Co., 564 Third St., Des Moines, Iowa

The Great West
by Estelle E. Collier



THE entries to the Panama-Pacific Exposition poultry show close October 15. It will be the largest gathering of poultry and poultrymen ever seen in this country. Never before has there been such a grand chance for personal enjoyment coupled with a chance for profitable expenditure of time and money as there is this fall at San Francisco. There we have one of the largest expositions ever given showing us the world's greatest products, the world's greatest efforts at invention and works of art and beauty. Those who are interested in the fair for itself but want to attend the poultry show will do well to put off their trip until November and enjoy the two at once. The poultry magazines will be represented there and those who have never before considered the industry seriously will there give thought to what it all means. They will subscribe for papers and notice what breeds of poultry have been given the preference. They will see that when a big poultry press backed by thousands of industrious men and women are building up an industry of ths kind it is wise to get in on the ground floor and be ready to reap some of the profits.

At these poultry gatherings where poultrymen and women talk over their prospects and their past sales they readily find from what sort of advertising comes the greatest number of sales. For instance, we once decided to sell out a whole flock of Black Langshans and put a big advertisement in one of the poultry papers. Before we got our paper of that month's issue we had a long distance telephone call from Spokane, asking what our price was for the entire flock. The sale was completed in less than three minutes and the birds on the way before the next night. Almost as quick as hustling them off to the market, isn't it?

Washington will send a special train to carry the members of the American Poultry Association who meet in annual convention at San Francisco while the poultry show is in progress in November. The special rates given will be the best offered any gathering of people traveling so great a distance. Other special trains will go toward San Francisco at the same time and all will meet there in one happy crowd.

Washington will ship her birds by ocean steamer which will cut the rate in half. Birds travel in splendid condition by water. It has been often noticed that when chickens have been taken on long voyages they begin to lay as soon as they get out to sea. Capt. Fisher who has traveled around the "Horn" many times always took a flock of hens aboard for meat and each time the hens started to lay so well that he could not part with them. He finally began reading up on the fancy, getting poultry papers at the ports he visited until he left the sea to start a poultry ranch in British Columbia at New Westminster on the famous Fraser river. When down at a port in Mexico some five years ago, Capt. Fisher saw an article by Harry H. Collier and was determined that if he reached Tacoma, Wash., he would look him up. They got here during that Summer and spent the afternoon with us, the Captain, his wife and first Mate. We took them around to see the fowls raised around Tacoma, and heard all about the wonderful birds he carried with him on his travels. He took with him a jar of our peaches to open as they sighted the English Coast and they were to write us postals reminding us of their trip. We received the postals and the next we heard was that they were settled at New Westminster on a poultry ranch.

Capt. Max Garski had a poultry ranch at Snahomish, Wash., and when he went to sea this last fall took his flock of beautiful white Orpingtons aboard. They will accompany the Garskis around the world, laying well during the trip as usual and return rejuvenated from the sea air. They will lose nothing as they will then be prepared to start up again with their same stock when they leave the sea. I say "They" because Capt. Garski has a family of five little boys and a wife who usually accompany Capt. Garski on his travels. The little boys are at home on the water, one having been born at sea and one traveled with his father on a long voyage when his mother was ill in California.

The South West Wash. Fair at Centralia-Chehalis was a huge suc-

cess. It was a Summer show and yet they had over eight hundred birds covering over sixty-five varietes. It was wonderful that such birds could be shown at this time of the year, August 23 to 28, when almost all birds are in the moult and the young stock still in green feather. Harry H. Collier was the Judge and he said he expected a small show because even a September show usually makes. a poor showing.

The Tacoma Show opens December 31 and will be the largest show ever put on in Tacoma. Wm. Shepherd is the Secretary and knows the work from A to Z, as he has been the Secretary for years. Wm. Coats who hails from Vancouver, B. C., is to be the Judge. We consider him one of the best poultry judges on the Coast . He was our Judge three years ago and four years ago also. This is Tacoma's twenty third annual show. Its Secretary, Wm. Shepherd is one of the original charter members who helped organize the Tacoma Poultry Association in Decmbr 1893, consisting of seven members. Today three of those original members are still active workers in the organization, namely, Henry A. Durr, Wm. Shepherd and Harry H. Collier.

Tacoma has one of the most popular organizations known anywhere along the Coast. In this show we find the wives of the members taking a very live interest in the work, both in the showroom and in caring for the fancy at home. At all times the wives and daughters have helped smoothen out the trials met with in the show room and during all the twenty three years of their exhibitions there has never been an award protested. At the close of each show we have a banquet where all the wives are entertained and the strangers and friends from outside towns. Some years during the hard times the banquet has been a donation affair but it has always been a most gratifying affair where everywhere the new member feels the companionship of men and women with the same high aim.

The Buff Rock Breeders have sent out a call to have a big gathering at San Francisco, hoping to see at least a thousand birds represented there. The State of Washington will send a hundred. A great many Leghorns will be sent from Washington as Leghorns are given the preference by a great many breeders.

Seattle will hold two shows this season one in December and the other in January. Seattle boasts of two poultry Associations.

The Washington State Poultry Breeders Association, successor to the Washington Branch, will hold its annual show at North Yakima, January 4 to 10, 1916. A. F. Linse, secretary, and Harry H. Collier and Oscar Nelson as Judges. At this show the American Poultry Association gold and silver medals will be offered. This association gives extraordinary prizes doubling prizes on any varieties that show a hundred or more birds.

Near Elma, Washington, the mill companies have left on their hands a great many acres of logged off lands It is a hard matter to clear these stumps from the lands and the hardships endured by the pioneers are greater than will be endured except when privation makes it a matter of necessity. These mill companies are banding together, and selling the lands off cheap, trying to put them on the market as poultry lands as poultry and cattle are about all that can be kept on these lands when in the course of clearing. One of the propositions made was to give a clear deed and title to anyone clearing twenty acres of these lands. They propose also to clear these lands by machinery and dynamite. The best methods known now are to dynamite the stumps and then burn the roots, small trees can be pulled over by horses, as the trees in this country have short roots that spread out over the ground just a little below the surface. On the logged off lands, however, only stumps are left and these are in many instances often from three to six and seven feet across, standing five and six feet high. This means slow work and a season or two is gone before any work really worth while is accomplished. One man, who was a promoter of one of our large prosperous coast towns, now proposes to start poultry ranches on these logged off lands, after he has them cleared. He proposes to have nothing but fancy stock on these ranches and form just such a colony of poultry breeders as you find around Petaluma, California. Poultry breeding is growing to be one of the most fascinating as well as profitable and popular industries on the Coast. It is proven by one fact alone and that is that so many men of wealth are ready to back those who would undertake it. They have the idea that it must be run on a more liberal basis, with larger plants and armies of efficient workmen, to insure success.

We see by the American that Mr. Schwab wore his white flannels at Atlantic City and made quite a hit there. We want to remind him that when we see him at San Francisco it will be in November and tho the climate of California is rated all over the world as "Golden" and warm and sunny and summer all the year round, yet grate fires and overcoats are very much in evidence in San Francisco in November. We should love to see Mr. Schwab in his white flannels as we have a special liking for flannels and think them the most becoming garments worn by men and we regret that he will come at a time of the year when few will be seen except on those who have the boating craze to such an extent that they insist the weather is grand when the rain is falling in torrents.

OLD FORGE POULTRY FARM

Old Forge Poultry Farm, Box X, Spring Grove, Pa., started the season off with a bang, by showing the same week at both the New York State Fair and Hanover, Pa., Fairs two remarkable strings of S. C. Buff Orpingtons.

It was the writer's privilege to handle several of the youngsters of the Hanover string, which show great promise, beautiful in color, with true Orpington type. Their old stock, while yet in the molt, were grand specimens of the Orpington family. One thing which always impresses us with this line of Buffs is the uniformity of type, characterized in the Old Forge line. For years Mr. Glatfelter, the proprietor, has used his best energies in building a line of Buff Orpingtons which would meet the requirements of the Standard of Perfection as well as to be prolific layers. His efforts have been rewarded, as seen by the records made at the Missouri Egg Laying Contest as well as these new show room achievements at Syracuse and Hanover, week of September 13-17.

Not to be satisfied with the records made at Syracuse and Hanover Fairs, the Old Forge Orpingtons again won at Allentown, week of September 21st, winning 1st and 2nd Hen, 1st and 4th Cock, 1st Pullet, 3rd and 4th Cockerel and 1st and 2nd Pen. They have hundreds of birds now ready for shipment. Write them today.

BANGING

Away in the advertising columns of "Everybodys" will find you customers for all you have to sell. Don't take our word for it, try it.

"HOMESTEAD" SILVER CAMPINES

The Vigorous Strain

Win at Boston 1915, thirteen regular prizes, including four firsts, specials for best display, best cock, hen, cockerel and best pen. Winnings at the New York State Fair, the first big show of the season, September 13-18, 1915; Second Cock, First and Fourth Hen, Third and Fifth Cockerels, Second and Third Pullets, First Old Pen, Second Young Pen, Second Display. Several specials with much comment on the quality, beauty and condition of our birds.

In addition to their blue ribbon reputation our VIGOROUS STRAIN has an established reputation for stamina, vigor, early maturity and heavy laying that makes them most desirable. We can furnish stock that should win at any show in the country.

Our aim is full value, quality and satisfaction.

HOMESTEAD CAMPINE FARM

Box H 2 Wayland, Mass.

Simple Treatment For Early Symptoms.

By Michael K. Boyer, Hammonton, N. J.

WHILE the writer holds that it is not profitable to report too much poultry doctoring, inasmuch as even if the fowls are apparently cured they are unreliable as breeding stock, to give prompt treatment in the early stages is a wise act.

Reviewing the more common ailments in the poultry yard, we learn these facts:

If in the early stages of bumble - f o o t, we can spread the corn by painting liberally with tincture of iodine, daily for a weeb Bumble-foot is caused by having too high perches or roosting places. In flying down the fowl's feet often come in contact with some hard, sharp object which causes a bruise resulting in the corn.

When our hens are allowed to become overfat, a disorder of the oviduct is often the result, which causes it to "break down behind." It really is no disease—merely a penalty for injudicious feeding. The best remedy known is to kill and eat all such specimens. They are not sick birds.

Canker is a disgusting ailment, but generally in the start it can be checked by several applications of fine salt rubbed on the sore spots.

Four drops of aconite in a half pint of drinking water, given daily for a week or more, is effective in cases of catarrh.

Chicken-pox can be successfully treated by annointing the head and wattles with carbolated bathed well with hot water. A one-grain quinine pill should also be given each night for a week.

A one-grain quinine pill, given each night for three nights or a week, will also work wonders in cases of colds.

Cases of costiveness can also be relieved by adding 10 drops of sulphate of magnesia to each pint of drinking water.

For enlarged or sour crop, a half teaspoonful of baking soda to a quart of drinking water added daily for a few days is excellent. During time of treatment feed sparingly.

Cases of crop bound have been successfully treated by giving the bird all the warm coffee that can be forced into its crop. The dose should be repeated several times.

When a bird is debilitated it needs something nourishing so as to build up the wasting tissues. There is nothing better than a raw, fresh egg every morning, until the fowl shows signs of recovery. Then it can be changed to a little cooked meat, and a little muriate of iron added to the drinking water. When it is noticed that a bird is mopish, but otherwise seems in good health, this sluggishness can be quickly remedied by giving a family liver pill—just the kind that you would take yourself did you seem out of sorts. Repeat each night for three nights in succession. If possible also allow the bird free range over a grass plot during the day time.

Slight cases of diarrhoea can be greatly benefitted by adding a few drops of spirits of camphor to the drinking water. Also add finely ground charcoal to the soft feed to each dozen hens. A teaspoonful of fenugreek to the mash for every ten fowls is also a good rem edy.

Black Langshan male, owned and bred by Mr. Alexander N. Warner, **Titusville, Pa. Mr. Warner supplied a rare article on this noble old** variety, which was printed in our July issue.

A pill made of a half grain of quinine, one grain of sulphate of iron, and five grains of phosphate of lime, is just the thing for cases of leg weakness. A more simple remedy is ten drops of tincture nux vomica in a quart of drinking water.

A pill of asafoetida, about the size of a pea, given night and morning, is highly recommended in cases of limberneck.

When the fowl "rattles in the throat" it is evidence that there is some bronchial affection. This "rattling" will be more plainly noticed at night, while the fowls are roosting. Give a half teaspoonful, every other morning, of a mixture composed of equal parts of vinegar and water. If this is not effective, treat with a mixture of one part of spirits of turpentine with four parts of sweet oil, giving ten drops daily.

There is no more effective remedy for scaly legs than to coat them with gas-tar, allowing the preparation to remain on the legs until it wears off. The scales, as a rule, come off with the tar. To make a still more complete job of it, after the tar has worn off, is to wash the legs with warm water and car-

bolic soap, and after wiping dry apply a preparation of one-third carbolic acid to two-thirds glycerine. The glycerine has a tendency to soften and bring out the color on the shanks and toes that may have become harsh and dry.

* * *

Linseed meal is made by grinding Flaxseed from which the oil has been more or less completely extracted. "Old Proeess" contains more fat and somewhat less protein than "New Process" linseed meal.

* * *

Gluten meal and gluten feeds are by-products left in the manufacture of starch and glucose from Indian corn. Corn consists largely of starch. The waste product from the manufacture of starch or sugar is relatively much richer in oil protein than corn. Many factories are removing part of the corn oil from the waste, so that some gluten meals carry but little oil.

* * *

For some reason the Jews, in purchasing geese in the market, prefer a bird with a yellow or orange colored bill. So long as he can secure a light colored bill, the Jew will not purchase a goose with a black bill.

* * *

Catarrh is not roup. It is usually caused by dampness; exposure to a drenching rain is a good starter for the disease. Roup is a purulent catarrhal affection of the air passages. Dr. Sanborn says it is a filth disease, and not caused by "taking cold." The difference between roup and catarrh is that the latter has a tendency to get well without treatment, while the former seems inclined to progress to a fatal end.

* * *

An English remedy for leg weakness is to give each chicken daily four grains of citrate of iron, or five or six grains of phosphate of lime, put in the dinking water and given in pellets of meal. A good supply of nourishing food must also be offered and it should be of a kind caluculated to produce flesh and not fat—warms, ground raw bones, or chopped meat being very acceptable. Plenty of fresh, green food should also be given. Let the chickens have healthy exercise and do not overfeed them or give them food that causes the formation of fat.

If you stop to look at it, a feather is a masterpiece of creation. The covering of birds combines in a wonderful manner, lightness and complete ventilation, is a first class nonconductor of heat, and repels dirt.

* * *

A Canadian authority says that in his opinion the most profitable egg-laying fowl will be found in a white or buff variety of the American class. As a class, he says, they will beat all comers.

* * *

It is said that the calico printers use more than 40,000,000 dozens of eggs each year, and that the coffee roasters, the photographic trades, the cracker and biscuit combines, and the chemical trades consume more than twice as many. Large quantities are also used in the leather trades, for tanning, etc. They are also largely used in the preparation of many patent foods, and the liquor trade takes no inconsiderable number. For many of these uses, inferior grades of eggs are used—not because they are better, but because they are cheaper. One biscuit company in New York city buys 4,000 eggs every week.

* * *

Healthy, strong and vigorous breeding stock is necessary for quick growing, profitable market birds.

* * *

To secure best results, the scalding of poultry is something that must be done with the greatest care. Overscalding makes an unattractive carcass. The water should be just to a boiling point, but not actually boiling, before the birds are immersed. In doing this, it must not be forgotten, the operator must hold the bird by the legs and head and then lift up and down in water three or four times, when all feathers and pin-feathers should be removed very cleanly without breaking the skin. All scalded poultry should be "plumped" after picking by dipping for about two seconds in very hot water—just boiling point—and then thrown into cool water of the natural temperature, where it should be allowed to remain for 15 to 20 minutes.

* * *

A drop of glycerine is also a sovereign remedy for sore eyes.

CARBOLA PROTECTS POULTRY AND LIVE STOCK FROM DISEASE

Poultrymen and owners of live stock who have always thought that diseases such as roup, white diarrhea, mange, cholera, foot-and-mouth disease, etc., are unavoidable, and who have never done anything to prevent them from attacking their stock, are becoming acquainted with a new disinfecting, Germ Killing White Paint which is being placed on the market by a New York City manufacturer. This remarkable paint called CARBOLA, consists of a pure white mineral paint containing disinfectant elements many times stronger than pure carbolic acid and still it is claimed absolutely harmless and non-poisonous. The claims for this paint are substantially backed by proof that with its use in chicken houses, barns, stables, cellars, pens, basements, etc., infectious epidemics of diseases are prevented and lice, mites, ticks, bugs, and other obnoxious parasites and vermin quickly destroyed. It is inexpnsive and has shown remarkable results wherever tried.

Carbola is being sold by various dealers or can be secured direct through the manufacturing laboratories by addressing the Tmco Mfg Co., Inc., Suite 28. Free sample and booklets may be secured upon application This is a good article and should mee with a ready sale.

MAKING POULTRY PAY

depends more on the knowledge you have of Poultry Culture than on expensive equipment or extensive space.

Let Director Quisenberry teach you how to make a good living and a nice profit from a flock of thrifty hens.

If you want to save money and make money in the poultry business write us today for our large illustrated **Free Book,** "Dollars and Sense in the Poultry Business."

AMERICAN SCHOOL OF POULTRY HUSBANDRY

EGGS 12c A DOZEN
—IF YOU USE—

"OCULUM" the celebrated new discovery which has stood a United States Government test.

"I was getting 20 eggs a day when I began using "OCULUM" 3 weeks ago. Today I got 300."
B. B. McNEILL,
Cunningham, W. Va.

One drop a day to each hen in the Feed—THAT'S ALL. Trial Bottle, (240 doses) 10c. H. I. CO.,
Box, T, Salem, Va.

Literature Free.

IMPORTANT ANNOUNCEMENT

"Oculum" users will be pleased to learn that we have recently discovered how to successfully use "Oculum in the feed as an **Egg Producer and Flesh Builder.**

DIRECTIONS:

Mix "Oculum" (one drop to each hen) with a little water, then sprinkle the feed and cover it up. "Oculum" will go through the feed in a short time. Feed "Oculum" treated feed (all they will eat) once a day regularly and the comb will turn red and stay red and you'll get the eggs.

Dose for other fowls in proportion to their size compared to the hen. H. I. CO.,
Salem, Va.

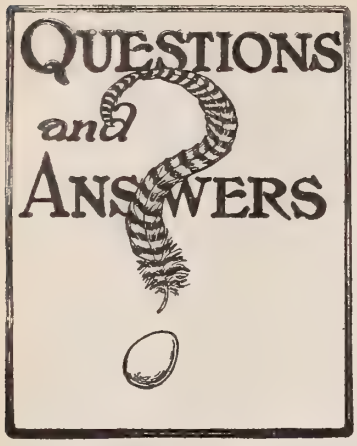
WOOLERY FARM, Ralph Woolery, Mgr. Box E. Bloomington, Ind.



In this department we will answer questions pertaining to poultry. When special information in regard to diseases, etc., is desired, same will be furnished by mail to avoid delay. Ask your questions, let us help you.

Q. Would you kindly, through the columns of Everybodys, give me information of what is wrong with my White Rock pullets? They get a lump in their crop and won't work off.. They will stand around droopy for a few days and won't eat. I feed 100 pounds cracked corn, 60 pounds wheat, 32 pounds oats for grain in litter, 10 pounds bran, one pound meat scrap, 1-4 pound oil meal, one handful of salt.. Mix this bran even parts with blackless egg mash and feed dry. Could you not give me a good formula for these five-month-old pullets.
A. I. R.

A. Your stock evidently troubled with crop bound. What do you use for litter on the floors? It appears that they have consumed some floor litter which has clogged the passage from the crop. If this is the case, the only sure cure is to open the crop and clean out the passage. If you do not understand this operation, will advise in our next or by mail. Believe your formula of grain foods are consistent and will produce good bone and size. Your dry mash formula also looks pretty good, except that you are using too much salt.

* * *

T. B.—Your question partly answers itself. We believe it advisable to separate all birds, according to sex after the breeding season if they are going to be used as breeders the following year. We think this particularly advisable with the females.

* * *

A. In your August number of Everybodys, on page 364, you have a mash recommended to feed to laying hens. Now, I want to ask you just what "Gluten Meal" is, what it contains, etc., as I have failed to find anyone who could tell me what it is. E. L. A.

A. "Gluten Meal" is a corn product, used with much success with all kinds of live stock. Of late it has been used to particular advantage, mixed with other grains and meals as a dry mash food. If interested in its properties and correct analysis, will be glad to give you this.

* * *

Q. I am a reader of your paper and raise pure bred chickens, but I am having very poor luck this year. My chickens have a sort of a canker in their eye.. They get sore and then swell up, and then a white scum comes over them. In a few days it becomes hard and can be taken out. Can you tell me what to do to cure and prevent it?
A. E. P.

A. We believe this is a specie of Roup. We would isolate all afflicted birds, cleaning their heads with Fer-Sol and we can also recommend Zenolium wash. We print your letter in full, hoping that some of our readers, who have had experience like this will answer you direct.

* * *

Q. I have begun to feed beef scrap, keeping it before my flock at all times. Is it safe to do so, if not, what could I substitute? Any advice given will be very much appreciated as I am anxious to learn all I can as I go along.

Thanking you for past helps, and wishing you and your Magazine a great success, I remain, A. S.

A. In starting to feed Beef Scrap, we would advise that it be fed in a hopper and the hopper opened, but every other day for the first week or two. In this way they will gradually become used to the good and it is more liable to prove of value to them.

* * *

Q. How old can a cockerel and pullet be before they are too old for showing in that class? W. L.

A. In poultry, Cockerels and Pullets are less than one year old. After they pass that age, they can only be exhibited as Cocks and Hens.

NEW YORK STATE FAIR

With 9,300 entered specimens in the Poultry Department, shown and exhibited by 432 breeders, the 1915 New York State Fair proved to be the largest and greatest exhibit ever held in America. Quality was seen here at its best. Every breed and every variety was well represented by charming quality birds, in most cases, seen in their best condition, the winners have every reason to crow strong and long for in these superb classes it required the very best to win in each. A full report will be found in our next issue.

As usual, Mr. John Martin's Regal White Wyandottes won a sweeping victory by taking five first prizes with a quality that can't be questioned. The Wilburtha Farms making their first showing in Single Comb Reds, won first display and honorable award and mention in every class. This line looks extra strong and qualified and we expect more records from them in the near future. The Monmouth Farms Single Comb White Leghorns under their new owner, Mr. Mill, also made a notable record, while Mr. Harvey C. Woods' Light Brahmas won highest honors and most favorable consideration. Columbian Wyandottes were one of the two best classe ever seen. Here Mr. Chas. D. Cleveland and Mr. A. G. Warner made splendid records. In a beauty class of Buff Orpingtons, the Sunswick Poultry Farm made one of their best records to date, a record that is a credit to their line of stock which shows exceptional breeding value. Mr. P. H. Glatfelter was also a conspicuous winner here.

In White Rocks, the Rancocas Farms won all six first prizes, making a show record that stands unequalled. Their Single Comb White Leghorns did well. Here we met Mr. Frank L. Platt for the first time since the last New York Show, exhibiting his Red Sussex and winning all highest honors which seems to have become a habit with him. In Barred Rocks, the class was some larger than in the past two years, but it was not what we had hoped for, Mr. Ressiguie winning well and his first prize cockerel was in particular a very handsome bird.

Here also were shown one of our old-time breeders, Mr. Duryea, who won first Hen, first Pullet and other prizes. Other noted breeders and lines of birds were seen and other records were made as the show was well balanced with a most worthy display in all classes. Exceptional interest was evident here. This interest was noticeable and promises well for the future. Many good sales were reported and from every view point this greatest of all shows was a credit to poultry, its breeders and to Superintendent W. H. Manning, whose arrangements were complete and whose management of this show was all that could be desired. No other man could have secured this great entry or could have handled it in a better way. His very personality creates confidence and his work insures equal consideration to one and all alike. The breeders and public know and appreciate this.

Mr. Manning was ably supported by his Assistant, W. H. Anderson, who is a most capable and efficient manager, and also by Mr. Barney Mosher, whom we all know for his ability in cooping shows.

The Empire State can well feel proud of its new record of holding both the greatest Summer Show of the World and the greatest show ever held in America, while the breeders who made this show posible deserve every credit, their loyalty and interest is pleasing to know and their succes hoped for.

SHOWS and ASSOCIATIONS

THE BIG BOSTON SHOW

Preparations for the coming big Boston show have been under way for some time and the premium list is now being compiled. Inquiries for premium list have been coming in for more than three months and indications point to more new exhibitors than ever before. Word has been received from a breeder in Georgia and one in California who have never shown at the Hub, saying they intend sending birds to the coming show, January 11 to 15, 1916.

The Waterfowl Club will hold their annual meet here and over $200 in specials has already been subscribed. Light Brahmas will be out strong. The White Wyandotte class which is always strong at Boston, promises to be a record breaker, for up to date $100 has been donated for specials, $25 each for best male, best female, best pen and best display. There will be something doing in Plymouth Rock Alley also, and the Hamburg Crested Fowl classes promise large entries, as is usual at Boston. The movement in Bantam circles and the formation of a Bantam Club in New England will tend to increase entries in the little bird classes.

As has been the custom for a number of years, $500 will be offered in prizes in the utility department and an additional $50 will be offered on Turkeys. Even with the immense floor space of the Mechanics' Building, the prospects are that every available foot will be utilized. W. B. Atherton, Secretary.

* * *

THE POTTSVILLE, PA., CHALLENGE POULTRY SHOW

The Pottsville Poultry Show, November 9-13, 1915, has been designated the Challenge Show, because the management stands ready to challenge all, that in everything that goes to make a successful show, they are second to none, except in one thing, and that is number of entries, and that is not the fault of the management of the Pottsville Show, and those breeders and exhibitors who pass Pottsville by, are the greater losers.

This year they have secured a brand new hall for the Show, right in the heart of the town; they have six judges to place the awards; uniform cooping, both Adams and American Express; and the management has provided over $2,500 in cash money for premiums and prizes. Part or all of this twenty-five hundred dollars is yours for the coming and getting;; however, bear in mind that Pottsville has won the rather unique reputation that it is a fast show, that the competition is keen and it takes good birds to win out.

Do not be afraid of the early date, while some of the old birds are not fully molted out, or some of the youngsters not fully developed, your competitor is in the same boat, and Pottsville will be the great try-out show for the coming early winter shows; remember Riley will handle the Rocks, Hoffman the Reds and the rest are just as good. Entries close October 28th and the Secretary is R. O. Umholtz, Sacramento, Pa.

* * *

The National Rose Comb White Leghorn Club offers to members only and provided there is competition, handsome special certificates, on Rose Comb White Leghorns as follows: One each to Best Shaped Male, Best Shaped Female, Best Colored Male, Best Colored Female, Champion Male, Champion Female and Best Display; also silk badges to Champion Male and Champion Female.

The membership fee of the Club is $1.00 and all responsible persons are welcomed to membership. Inquiries concerning the club or the variety should be addressed to the secretary-treasurer, J M. Chase, Rampo, N. Y.

* * *

Remember the date set for the poultry show at Goshen, Ind., this year is November 30th to December 4th. Chas. V. Keeler, of Winnemac, Ind., one of the foremost poultry judges in America, to pass on the awards.

Last year Goshen, as promised, gave one of the best shows in the state. More silver cups were given than at any show its size as far as has been learned.

The awards were placed by score card judging and not a dissatisfied exhibitor left the show room to the knowledge of the show management.

The Goshen show has the reputation of giving a square deal to all. The best bird must win regardless to whom it belongs. The lion's share of the prizes went to out of town exhibitors with no one more pleased than the association members themselves.

By all means put Goshen on your list this year. Send your name to the secretary at once so as to secure the premium list when printed. Will H. Schadt, Sec'y, Goshen, Ind.

* * *

The fourth annual show of the Richland County Poultry Breeders Association will be held the week of December 7-11. This is the leading show of Southern Illinois, and we have 1,000 birds pledged from our local breeders, besides other exhibitors. We invite breeders from elsewhere to show with us, and you will find us a fine lot of breeders, always glad to see the best birds win. Eight silver cups that will make the heart of any breeder glad to win any one of them, and there are other premiums that are worth while. Judge D. E. Hale will judge the show by the score card system, and we indeed feel lucky to get such a judge as he, and we assure you at this show the best birds win. As we have a free show the show room is always crowded and sales are numerous. Catalogs are now ready. Write the secretary, E. G. Teaney, for one.

Secretary, E. G. TEANEY.

* * *

CALIFORNIA STATE SHOW NOTES

Much interest is already being shown by the California breeders in the show to be given by the California State Poultry Association at Sacramento, January 14th to 18th, 1916. The officers of the State Association are planning big things for their first show, and they are being enthusiastically assisted by all the members of the Sacramento Association. Many inquiries are now coming in to the secretary's office regarding the show and present prospects point to one of the largest and best shows on the coast. This show will come just at the beginning of the breeding season and a win made then will be of great advertising value to the lucky breeder as every one will at that time be getting ready to place their orders for stock and eggs; therefore a win will bring immediate results.

There will be five ribbons in each class and cash prizes will be paid for the first three places as follows: $2.50; $1.50 and $1.00 on singles; $8.00, $5.00 and $2.00 on pens. There will also be a big collection of trophy cups, medals and specialty club ribbons. Hinds, Luce and Russell have been engaged to judge the show. They are all popular judges on the coast and will draw big entries.

The premium list will be ready for mailing about the middle of September. Send in your

GOLDEN PENCILED HAMBURG CLUB

All lovers and breeders of this beautiful variety are invited to come together at Madison Square Garden during the week of December 31, 1915, of January 5, 1916, for the formation of a permanent organization. The meeting will be called for Monday, January 3, 1916, at three-thirty P. M., the location of the meeting place to be announced at the Bureau of Information. Entries should be made as large as possible in order to attract the attention of the public. See list of specials in the Garden Premium List. Communicate at once in regard to specials and other matters to John A. Gamewell, Little Silver, N. J.

* * *

BIGLERVILLE SHOW

The Biglerville Agricultural, Horticultural and Poultry Association will hold their fourth annual poultry show at Gettysburg this year instead of Biglerville, as before, on December 7-11, 1915. Gettysburg is a historical spot as well as the county seat of Adams county, which will give the largest attendance in the history of the show. Adams county has the great York Imperial apple belt of the United States, and poultry goes hand in hand with the growing of apples.

The apple growers get a big price for their apples this year and next year there well be large purchases in eggs, young chicks and stock for breeding. Breeders that have some for sale and can back up their goods will be well paid by exhibiting at the Gettysburg show this year. The premiums will be worth coming after. Write the Secretary, O. C. Rice, for a catalogue, which will be ready about October 1.
Medals.

National Columbian Wyandotte Club,
D. G. Keyler, Sec'y-Treas.,
Trenton Junction, N. J.

* * *

ELMIRA HEIGHTS POULTRY SHOW

The second annual poultry show of the Elmira Heights Poultry Club will be held at the "Philo" building, Elmira, N. Y., Dec. 14-17, 1915. The first show was in every way a success and we hope to make our second annual the largest and best attended show in Southern N. Y. With W. N. Wirt, Knowlesville, N.; E. P. Yaple and P. W. Georgia to judge the show, we see no reason why we cannot have every fancier in this section exhibit with us, as these judges are well and favorably known to all. Henry B. Peckham, Sec'y, Elmira Heights, N. Y.

* * *

The Cleveland Poultry Breeders' Association, T. P. Cagwin, of the Chamber of Commerce Convention Board, and the leading breeders throughout the State are working earnestly for the National Convention of the American Poultry Association in 1916. Meetings have been held during the past month where plans have been formulated working in the direction of bringing the convention to Cleveland. Frank C. Stier, President of the Ohio branch and director of the Cleveland Poultry Breeders Association, is acting chairman. He will call a meeting within a short time of interested parties to establish a permanent committee, who will devise ways and means of bringing the convention to Cleveland. Sec'y Cleveland Poultry Breeders Association.

NAT'L WYANDOTTE CLUB ELECTION

(Show Secretaries Take Note)

In the largest vote in the history of the club, the following officers were elected for the year 1916: President, Ralph Woodward, Grafton, Mass.; Vice Presidents, Richard Harwood, Littleton, Mass.,George M. Wilkinson, Blairsville, Pa., Geo. A. Kersten, Minneapolis, Minn., J. A. Leland, Springfield, Ill., Arnold Hagens, Kennydale, Wash.; Secretary-Treasurer, D. G. Keyler, Trenton Junction, N. J.

The National Columbian Wyandotte Club will offer its gold, silver and bronze championship medals, and a set of five special club ribbons at all forthcoming poultry shows in the United States and Canada that will give notice of the offer in their premium list and will mail a copy of same to the secretary-treasurer of the club, who will in return send list of members they may send premium lists. The notice to be printed as follows:

The National Columbian Wyandotte Club will award Gold, Silver and Bronze Championship Medals, and if two or more members complete at this show First Prize Winners in all classes are entitled to points towards the championship, proportionate to the strength of the competition, and are also offered a Set of Five Special Club Ribbons, as follows: For the best cock, hen, cockerel, pullet, and pen. An invitation is extended to all to join this club. A payment of $2.00 entitles to full membership to November 1st, 1916. Be sure you are a member in good standing before entries close for this show.

Address for catalog and membership card, also detail plan of awarding Championship

PITTSBURGH PROMOTES PROGRESS

Pittsburgh's Poultry Show is run on exactly the same lines as the industrial enterprises of the city. The dash and go characteristic of the Smoky City is nowhere better exemplified than in the annual show of the Poultry Exhibition of Pittsburgh. Within a radius of 300 miles of Pittsburgh—North, South, East and West lies one of the greatest poultry districts in America, and it is in this section that some of the best fancy poultry of the world is produced. From practically every town comes exhibits, large and small, to this show and fanciers come with their exhibits for a week of "entertainment royal" as one of last year's exhibitors put it.

The hall is truly exceptional, all the exhibits are on the main floor. Above and overshadowing every other feature, is the reputation for sales enjoyed by Pittsburgh. At no other show is the attendance greater and the visiting public is not a merely curious crewd. The great majority are those who may properly be called "back yard" fanciers. These small breeders keep a comparatively few birds for their own amusement and some of the best of the exhibits are annually purchased by these men to whom the very best only is acceptable.

Coming as it does during the week of January 17th to 22nd, it affords the breeders an opportunity for a last minute display to breeders who are about to purchase eggs or birds to strengthen their matings.

The judges include Rawnsley, Card, Kummer, Chapman, Pierce, Schwab, Punderford, Cook and Lewis, with others to be announced later.

This year the prize money will be arranged so as to include a cash award on all third prizes, an innovation that will be appreciated by small breeders especially.

TELL US NOW

that you intend to exhibit and it will help us put proper specials on your class. We want you to be one of the 1000 exhibitors at the next Remarkable Show otherwise known as

THE PALACE SHOW

If you want to be in on a good show—a big show and at the same time a low cost show, you will find it this year in the

CITY OF NEW YORK

Last year we had 12000 head of live stock on exhibit—all kinds—all sizes and only one head went astray. Every foot of floor space was taken.

December 7th-11th

this year will see that record excelled. It is certain that all floor space will be taken. Forty Judges will act and more than 20,000 visitors will see it.

For goodness sake get on the job. Meet opportunity at least half way. Remember this.

ENTRIES CLOSE NOVEMBER 22d

Entry fee—Singles, $2; Pens, $5. Bantams—$1.00 and $3.00. Pigeons —75c. Pet stock—50c. Song Birds and Cats.

EMPIRE POULTRY ASSOCIATION, INC.

ROBERT SEAMAN, PRES. L. D. HOWELL, SEC'Y.

"Watch the Palace Show"

THE hens are not adding much to the profit side of the ledger these days. They are moulting, and doing a very thorough job of it. The houses and yards are white with their discarded feathers and they are in tune with nature, whose "White winged seeds are sowing" at this season But they have earned their rest and we know that they will be in readiness, with renewed energy and vigor, to help fill the egg basket when this is most to be desired. The youngsters are developing with astonishing rapidity and are shifting for themselves very nicely, so that there is very little extra work required for either young or old stock, and gives us time to spend in retrospect, and take inventory, as it were, of the season's business and the outlook for the coming season. While the past season has not been the equal of the preceding year, still, taken as a whole, it has been very satisfactory. Certain it is, that we have been struggling against conditions never met with befor, and which, we are forced to admit, have been more kind to our particular line of work than to most of the world's work, but which, nevertheless, has had a depressing effect even upon our small business. Taking into consideration the terrible conflict across the water, which has affected the whole world, the political situation, which always controls to a more or less greater extent, our markets, especially the grain market, which is the backbone of our business, and the weather, over which man has no control, and we have been "up against" three very hard problems. And that we have been able to combat all of these and still be able to say that the year has proven satisfactory, speaks much for the poultry industry as an undertaking, if we are allowed to be the judge.

Shops have shut down, throwing laboring men out of work. Banks have closed their doors, but still the American hen (with emphasis on the American) has sung the same song and done her duty in the same old way, and the outlook for the poultry industry today is brighter than it has been for many years. We have a bountiful harvest of grains and the price of same is rapidly falling, and while this is a calamity for the great grain growers of the West, it is very hard for those engaged in this particular work to feel sad, "What is food for the goose should be food for the gander," to use a homely expression, and they have been reaping their harvest in high prices for several years, while the poor, downtrodden poultryman has been obliged to swallow the pill and smile, and keep struggling.

With the ever increasing demand for poultry outputs and the lowering of grain prices, why should not the poultry business have a bright outlook? Certain it is that war or no war, hard times or good times, "to live we must eat," and the public has learned that in no way can they invest their money in foodstuffs to greater advantage than in feeding their families eggs and poultry, and the best thing about it is that there is no danger of the work being overdone. Fresh eggs are always in demand, at whatever price they are bringing. It is said with authority that restaurants serve more eggs than meat the year round. So that although the egg crop of the American hen alone in the past year amounted to $280,000,000, there is plenty of room for the many who are venturing into the ranks this fall.

Some people seem to possess the idea that the "Hen Business," as they contemptuously term our work, is sort of a lame man's work, but when we consider the total value of the gold, silver, wool and sheep produced in America during the same year amounted to but $272,434,315, which was $7,656,685 less than the earnings of the hen, it soothes our feelings considerably and helps us to pity their ignorance. From inquiries received from all sections of the county it seems to be the general feeling that there is going to be a large demand for stock with which to start new plants.

And we bid them all welcome, and know that there will be a living for all who undertake the work if they can but realize that it is a business undertaking and conduct it upon business principles.

We recently had a very pleasant call from a man who has been an electrical engineer in a State college in a western state, who has read the "handwriting on the wall,' and knows that the time is fast approaching when strained nerves will fail him, so wisely has invested in a chicken ranch

PITTSBURGH POULTRY EXHIBITION

JANUARY 17th to 22nd, 1916

THE BEST BIRD WILL WIN

The Poultry Exhibition of Pittsburgh Incorporated

E. F. BALDWIN, Secretary **Crafton Station** **Pittsburgh, Penna.**

near the big markets and will make a living for himself and little family in God's fresh air hereafter. They—he and his wife and four small youngsters, were motoring to their new home and were certainly having a most enjoyable time, and after a long visit with this man, I felt that he would "make good" in his new undertaking.

One reason why this business of ours is so adaptable to all conditions is that it can be made into a family job, where every member of the family can help. The children and wife can be of assistance and to their own mutual benefit. It is a conceded fact that woman especially, seems to be particularly adapted to the work, for the simple reason that her trained eyes will detect small essential things which a man would overlook, and as there are many things to do which are much too heavy for woman, it makes it an ideal work for a partnership. If one has a desire to find out just what the general interest in poultry is, allow us to invite your attendance to the elegant new poultry building erected by the State of New York, upon the State Fair grounds at the coming exhibition, it will certainly be an eye-opener to many. There will be thousands of the best specimens of all varieties displayed in an attractive way, and the building is always filled to its capacity with interested spectators. Here we will find the oldest and best known exhibitors and breeders, as well as those just venturing to exhibit their favorites, both ladies and gentlemen in every sense of the word, annually bring their birds to be passed upon at this exhibition, and it is an education, indeed, and one that cannot or should not be missed by those whose enthusiasm needs kindling.

HELPFUL HINTS

Saturate fruit stains with glycerine, rub between the hands and all stains will disappear.

The worst soft corns will yield to a treatment of salt, ordinary salt applied night and morning.

A cupful of hot salt water often relieves a headache when everything else fails. For a chill, hot soda water is much better than stimulants and will induce almost instant perspiration.

When baking cookies, one greasing of the pan is sufficient; the second pan full will not stick.

To remove the smell of paint from a freshly decorated room, let several uncovered pails of water stand in the room for several hours, when the smell will entirely have disappeared.

When baking potatoes in the gas stove place them in the broiler instead of the oven, and they will bake twice as quick, thereby saving both time and gas.

* * *

Jugged Chicken

Separate the chicken into pieces at the joints. Take two or three tablespoonfuls of flour, half a teaspoonful each of salt and pepper and a liittle powdered sage, mix all together thoroughly; in this roll the pieces of chicken, after dipping them in milk, adjust the cover and let bake until the chicken is tender.

Canned Corn

Take corn when ready to eat. Cut from the cob. Boil one cup of sugar, one cup of salt and one cup of water together. Add nine cups of corn and let all boil together six minutes, being sure that it is boiling briskly all the time. Put into cans and seal tightly. ready to use.

Greenspring, W. Va., Sept. 9, 1915
Everybodys Poultry Magazine,
Hanover, Pa.
Gentlemen:

Enclosed find my renewal for one year's subscription to the only progressive Poultry Journal in the East, "Everybodys." It is growing from issue to issue and ought to be in the height of the season for everybody's being anxious for the arrival of the "Everybodys."

Wishing your able present management the best success, I am,

Yours respectfully
FRANK W. SPIES.

Pear Butter

Wash the pears and without peeling them, boil until they fall to pieces. Rub them through a colander to remove cores and seeds and skins. Put the pulp into a stone crock with half as much sugar, add spices to suit the taste and cook mixture slowly until it becomes smooth and thick, stirring frequently to prevent scorching. Seal the butter in jars.

Apple Chutney or Catsup

Wash, peel and core four quarts of apples; cook them with a quart of brown sugar and two quarts of cidcr vinegar, until the resulting mass is smooth and thick. Place the mixture in a crock, add two pounds of seeded raisins, chopped fine, a small mild onion and one ounce each of white and black pepper, two ounces of ground ginger, one tablespoonful of salt. Mix the ingredients thoroughly, heat, then let stand over night. In the morning seal the chutney in jars.

Apple Rolls

One cupful sour cream, a little salt and soda, sliced apples and sugar. Make a short crust, roll out thin and cover any good cooking apples sliced thin, sprinkle with sugar and cut into strips two inches wide, then roll each strip up and place one end in pan, sprinkle little sugar and bits of butter on top and place in oven to bake brown. Serve with the following sauce:

Sauce—One cupful of water, two tablespoonfuls of flour, one-half cup of sugar and butter size of an egg, flavor with nutmeg. Boil all together and pour on rolls and serve.

LUCKY SEVENTH

Great Western Ohio Poultry Show will be held in Eaton, Ohio, Jan. 24-29, 1916. Special efforts are being put forward to make this show the greatest ever held. Six other successful shows have been held and if grand cash prizes, handsome silver cups, magnificent special premiums will help this show will be a record breaker. The Ohio State University will be present with an exceptionally fine educational exhibit. The Poultry Institute will be the best ever held Great plans are being made to entertain visitors. Better get your name on the advance list to receive the premium list as soon as it is off the press. This will be about December 25th, 1915. Address, Ora Overholser, Sec'y Great Eastern Ohio Show, Eaton, Ohio.

PENNA. NEEDS ACTIVE SPIRITS TO PROMOTE ITS POULTRY INTERESTS

Realizing the demoralized condition of Penn. poultry organizations and hopeful of better conditions, a number of poultrymen informally considered during the Allentown Fair, the available men who possessed the necessary qualifications to bring order out of chaos in this state. The average member of the Penna. Poultry Breeders Association is not in close touch with our needs and seldom knows who is willing to give his time and energy to the development of a great industry.

Among others approached and considered were Aaron Fell, of Perryville, Pa., C. F. Rankin, of Pittsburgh, and J. Walter Keller, Philadelphia. After debating the qualifications of these men, the sentiment sifted unanimously to Mr. Keller's candidacy. Mr. Keller, of Philadelphia, has agreed to let his name stand for President, and we know he will give the office the best that is in him.

As a running mate and located to look after Western Pennsylvania interest, Aaron Fell was the choice of all who were approached for first vice president. W. T. Wittman, of Allentown, we are told, will accept office and give the organization the benefit of his wide experience. It looks like Wittman for the 2nd vice president.

R. O. Umholtz, of Sacramento, Pa., up in the coal regions, is one of the most active spirits in poultrydom, one of the boys that gets things done. He wants an organization so wide-awake that breeders will fight to get in and his fertile brain will help evolve such a body if we make him secretary. All hands should be up for Umholtz.

Fred Cook, of Beaver, Pa., has been treasurer for so many years and work-

RICH GOLDEN YOKES depend on summer green food. Hens can get this necessary succulence better and cheaper than green food and will lay more eggs if you dissolve SUCCULENTA TABLETS in their drinking water. 100 large tablets 50c by mail. 250 tablets $1.00 postpaid. THE SUCCULENTA CO., Box 405-24 Newark, N. J.

WOOD'S LIGHT BRAHMAS
WIN — WEIGH — LAY — PAY
A Splendid Lot of Young Birds For Sale
Reasonable Prices From My Winners
At both New York Shows, Philadelphia, Boston, Chicago Coliseum, and New York State, Allentown and Hagerstown Fairs.
SATISFACTION GUARANTEED. Please Mention Everybodys
HARVEY C. WOOD BOX E BOUND BROOK, N. J.

"Everybodys" Illustrated Ads.

EVERYBODYS ILLUSTRATED ADVERTISEMENTS.——Under this heading we give you a forty (40) word ad. with a small sized illustration (to be furnished by us) for $2 per month, for less than one year, or for $20 per year, payable quarterly in advance. These rates are net. Words in excess of forty, five cents extra per word per month. Numbers and initials count as words. New copy, plainly written should reach us by the 18th of the month preceding date of issue. Change of copy should reach us by the 10th of month preceding date of issue. Always Mention Everybodys.

BLACK LANGSHANS—Winners of 2nd Prize Pen at Rochester Exposition Show. A few fine Cockerels from same matings to dispose of at reasonable prices, considering quality Prices furnished on request. Correspondence solicited. Guy Rolph, 378 Conkey Ave., Rochester, N. Y. (96)

HUSTON'S BARRED PLYmouth Rocks have been winning honors for years at Williamsport, Cleveland, Rochester, Buffalo, etc. I now offer for sale a select line of breeding birds, bred from my winners; write me your wants today. Jas. T. Huston, Box 44, Hanover, Pa.

AT NEW YORK STATE Fair, 1915, in the best class Columbian Wyandottes shown I won Old Pen First, Young Pen Fifth, Cock Third and Fifth; Hen First, Display Second. Select old and young birds for sale. Type Color and Quality assured. A. G. Warner, Whitesboro, N. Y.

WOODS LIGHT BRAHMAS for the Season of 1914-15 won Three Firsts at the New York Palace Show. Three Firsts and Best Display at Chicago. Four Firsts at New York State Fair, also winners at M. S. Garden, New York, Allentown, Paterson, etc. Splendid exhibition and breeding birds for sale now, with satisfaction assured. Address Harvey C. Wood, Box E, Bound Brook, N. J.

BIRD'S BRONZE TURKEYS are America's Leading Strain. The champion winners of the age. Our Partridge Rocks have also won at the largest and best shows, east and west. 500 birds of each variety for sale. We can supply your wants to your full satisfaction; write us today. Bird Brothers, Box J, Myersdale, Pa.

THE HOMESTEAD CAMpine Farm, Wayland, Mass., breed the Vigorous Strain of Silvers. We offer you at this time and at special prices reliable bred stock. Mated trios and pens a specialty. Write us your wants and let us quote prices. If you wish winners, we have them.

WARDS CHAMPION DARK Cornish Fowls have the habit of winning wherever shown. Their records made at New York, Chicago, Hagerstown, Buffalo, Allentown and other leading shows is history. A grand lot of youngsters coming from this season's winners, write me your wants. John W. Ward, Jr., Box E, Pennington, N. J.

ORCHARD FARM REDS.—"The Winning Strain" in both Single and Rose Combs. We have birds that will win many of the honors this coming show season, so if you wish to be in line, write us your wants, we will please you as well as "Everybodys" does. Address, Orchard Farms, Box E, Noroton Heights, Conn.

SINGLE COMB WHITE Leghorns. Winners at Buffalo's Great Show and at many others. My birds are line-bred with that winning quality and also with the "Laying Habit." I can now fill your order for fine stock at reasonable prices; write your wants. Albert Waldron, Titusville, Pa.

RAISE BELGIAN HARES Beat poultry 5 to 1 for profit. Less work, less loss, less room, more attractive. Constant demand. We show how. Our booklet, "Profitable Hare Culture" sent FREE. American Hare Co., Dept. B, Pennington, N. J. (84)

WHITE RUNNER DUCKS, the World's Greatest Layers. I now offer you stock from my famous winners for breeding and exhibiting, have a large quality stock of special breeding worth. If you don't breed Runners, you are missing something. E. G. Curtis, Afton, N. J.

ROSE COMB RHODE ISLand Reds, winners at Cleveland Fair, 1915; also at Toledo, Buffalo and where shown in hottest competition. Birds of merit for exhibition and breeding, of extra shape and sound color. Write your wants. Satisfaction guaranteed to all. H. G. Stacey, No. Ridgeville, Ohio.

HOFFMAN'S SENSATION Strain of S. C. Brown Leghorns are up to date. I am offering some good yearlings of both Pullet and Cockerel mating for sale.

Write your wants. D. J. Hoffman, Dayton, Ohio, 34 Burton Avenue.

ed so faithfully, that there seems no need of any change there. Everybody for him.

The ballot recently sent out calls for six members of the Executive Board to be voted for. Among those favorably considered and geographically well distributed are C. F. Bowers, of Erie; A. Fred. Kummer, Butler; H. S. Werstberger, Altoona; James T. Huston, Hanover; F. W. Delancey, York, and E. E. Althouse, Sellersville, the last three representatives of press. The press of the State will earnestly back any organization that shows it means business, whether it is represented in the official family or not.

The annual meeting of the Penna. Poultry Breeders Association will likely be held at Harrisburg, Thursday, December 9th. The Harrisburg boys are entitled to the convention because they have secured more members for the A. P. A. than any other association.

A sample of GRAN-O-LAC—Conkey's Dry Buttermilk—has just reached our desk and we feel that is worthy of comment.

This product is simply buttermilk with the water removed. In taste and acidity it is easily recognizable, and it looks to us as though it is an article that will fill a long felt want.

We are informed that it has been only within the past few months that it was possible to make a dry buttermilk, having all the desirable features of the liquid article and yet overcoming the features that made buttermilk feeding so disagreeable. However, a creamery in Lincoln, Neb., has just been equipped with machinery for the purpose and it is now possible to secure GRAN-O-LAC at any time of the year and to keep it indefinitely if stored in a dry place.

We are further informed that both young and old birds respond quickly to its feeding, and as both eggs and poultry have a better flavor when fed on buttermilk, we suggest that our readers send to the G. E. Conkey Company, Cleveland, O., for a sample and become acquaintaed with a food which, we believe will revolutionize the feeding of poultry.—J. T. H.

J. C. Fishel & Son, Box 50, Hope, Ind., made a wonderful record at the Illinois State Fair, winning on their White Wyandotte, 1st and 2nd Cock, 1st Hen, 1st and 3rd Cockerel, 2nd and 3rd Pullet, 1st Old Pen and 5th Young Pen. This, on top of their wonderful win at Louisville, where they showed only old birds, yet won Sweep Stakes on Cock, Hen and Pen, is certainly going some. We call our readers attention to their advertisement as appearing elsewhere in this magazine, as they have hundreds of birds now ready for the fairs and winter poultry shows. If interested in White Wyandottes of quality, it would be well to write them.—J. T. H.

The Zenner Disinfectant Co., 540 Lafayette Ave., Detroit, Mich., will send you for the asking their Poultry Life Insurance Policy.

Everyone keeping poultry, whether a dozen hens, or are breeding by the hundreds, should secure this guarantee as prescribed by the Zenolium Co. It is the convincing arguments of those who have used this disinfectant which has made this preparation universally used the world over by poultry keepers. Write them today and secure this life insurance policy which will be of inestimable value to you.—J. T. H.

WHEN ANSWERING ADS—Always mention "Everybodys."

NOVEMBER 9-13, 1915

TRAP NEST BIG AID TO PROFITS

BREEDER CAN TELL WHICH HEN IS BEST LAYER AND NUMBER OF YIELD—EASY TO PICK PRODUCERS—RESULTS IN ADDING TO CAPACITY OF FLOCK BY BREEDING ONLY THE BEST—J. HARRY WOLSIEFFER.

A few years ago the users of the trap nest were laughed at, the claim of the non-users being that it consumed too much time, and that flock or pen averages would enable the poultrykeeper to improve the producing qualities of his flock with a great deal less labor. The non-user also pointed out the fact (not disputed) of the many flocks throughout the country that were on a paying basis, so the majority of poultrykeepers have gone on year after year without knowing how many eggs each female lays breeding indiscriminately from the poorest layers as well as the best, gleaning nothing of the outward signs of a heavy layer, getting poor results rather than better each year and in many cases after a few years making a failure in the business that at the start seemed full of promise. There are ways of knowing a good layer from a poor layer, even to very close estimation of relative productiveness, but few persons can even learn these except by intelligent use of the trap nest.

It would be folly to suggest that each poultrykeeper should attempt to trap-nest the whole flock, in some cases amounting to several thousand fowls, but every poultry raiser who is in the business for profit should at least trap-nest enough fowls from his flock of pullets each year to enable him to have a goodly number of known producers to breed from each year. In this way a gradual increase in the producing powers of the flock will be noticed each year and a step forward will be made instead of standing still or slipping backward in the matter of egg production.

Trap-nesting pullets for one or two months only is pretty much of a farce in so far as real knowledge goes. The best use of trap-nest is to use them long enough and continuously on some fowls until a real line has been obtained on their producing powers of shelling out hen fruit. It is a known fact that often the pullets that lay the earliest and put the most eggs to their credit the first 30 or 60 days are but indifferent layers after that period, and that many of the pullets that start at full maturity of the breed or variety and that lay from 15 to 20 eggs per month are the steady performers and keep everlastingly at it, making the fowl with the 160 to over 200 eggs in the 365 days of trap nesting.

Again the non-user of the trap-nest will always find that, first, one is sure in the spring—the regular hatching time for the producing of the future laying flock—that as many poor layers will then be doing duty as the good ones, and in the majority of cases the eggs used for the hatching of the new crop for egg production will come largely from the fowls that produced no eggs during the early winter; second, nothing is known regarding the health of the fowl; hence the time is wasted in trying to hatch eggs that, even if they do hatch and produce a chick, the chick has but little chance to live, or if it does, never amounts to more than the parent stock. In fact, the rule is that it will be weaker and less productive than the parent stock. This is haphazard breeding—the kind that about one-half of those entering poultry indulge in, and the results are, first, a flock that, with care may hold its own for several years, giving a small profit; second, a flock that each year produces less than the first, due to the poultry of the parent stock at the start.

It is very easy to slip backward, and it takes intelligent breeding and care to hold the producing powers of the flock to a paying average each year and go forward by small degrees. No flock ever went forward by the hit or miss method, and but few flocks ever held their producing powers for any length of time. It is either a step forward or backward and the trap nest, coupled with intelligent breeding, alone can produce the desired results.

Trap-nesting from its beginning will show the poultry keeper many things regarding "henology" one needs to know besides the number of eggs laid by the fowl in a given number of days or a year. If one marks the eggs that are to be used for hatching, it can be seen how each hen's eggs hatch and what kind of chicks are produced. If the chicks are toe marked one can know the relationship of the fowls that are to be mated together for future breeders. Trap-nesting after a time will enable one to see many things, such as overfeeding—first, signs of sickness, to detect lice, size and color of the eggs laid, and many other things that the non-user of the trap-nest never dreamed of.

There are many so-called systems of detecting heavy layers by certain parts of bony structures, but they are in no sense true; for they claim that certain things are fixed and permanent in any individual, whereas these are more or less modified by immaturity, changes to maturity, etc., and no system other than the trap-nest could or ever will tell just how many eggs a hen will lay in 365 days or longer. Some systems can tell the fowl that is laying—but the number of eggs laid by the hen is mere guesswork.

The hen of the future will be from trap-nested parents, no matter what breed the "Tom Barron" fowls are. Wyandottes, or a cross, they are the product of trap-nested parents, and their annual winning at the laying contests held in this country should be an object lesson to the American beginner that for egg production it pays to trap nest for the future breeder. That our present-day breeds, the American standard Leghorn, Plymouth Rocks, Wyandottes, Rhode Island Reds or Orpingtons, can be brought to a high standard of egg production goes without saying—it being merely a matter of safe and sane breeding and in the majority of cases the new standard of perfection as adopted by the American Poultry Association at Chicago this month has in no way harmed the utility qualities of the majority of varieties in the standard. Rather, thanks to the leading breeders every leeway has been given to improve these qualities. It is now up to the breeders to make the most of their opportunities and breed along safe and sane lines.

SHOW SECRETARIES AND BREEDERS

The American Columbian Plymouth Rock Club offers during the season of 1915-16, at all shows, big or little, one set of its specials ribbons, as follows: Best Shaped Male, Best Colored Male, Best Shaped Female and Best Colored Female. These ribbons will be awarded to members only, and only in case two or more members competing, but regardless of the size of the show. Any breeder may become eligible to win one or more of these beautiful ribbons by sending in his application with one dollar dues, any time previous to opening date of this show. Show secretaries will kindly notify me if they list this offer, so provisions can be made for proper number of ribbons. Address, C. R. Deardorff, Sec'y, North Judson, Indiana.

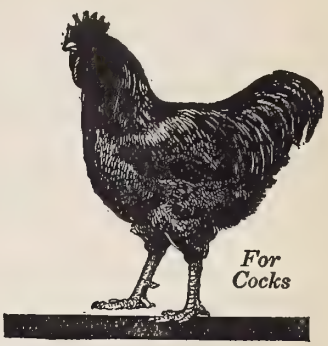
Charc-Oil Will Round Out and Tone Up Your Whole Flock

For Hens



For Cocks

Read This Letter

Charc-Oil is a Medicated Charcoal.

Everybody knows that pure charcoal is

A Wonderful Corrector

of all intestinal troubles. But Charc-Oil is better—it's pure hardwood charcoal medicated with antiseptic, soothing oils. It regulates digestion, corrects intestinal gases, heals, soothes. With it you can save your young chicks, keep the youngsters growing and vigorous, and the old birds in perfect condition through all seasons.

The most important ingredient of Charc-Oil is Pheno-Septol, an antiseptic and germ destroyer. There are also such costly and aromatic oils as Thymol, Eucalyptol, Menthol, Peppermint, etc. Charc-Oil counteracts the filth and poisons that fowl constantly pick up in grain scattered in litter, dust, etc., and in drinking from puddles, etc. Charc-Oil is the "Safety First" ingredient in modern poultry feeding. Your flock needs it—right now.

NATIONAL WHITE WYANDOTTE CLUB

New Cumberland, Pa.,
August 25, 1915.

King Remedy Co.,
21 Elm St.,
Rochester, New York.

Gentlemen:

For some time I have closely observed my growing stock to note the results obtained from the use of CHARC-OIL.

I find this: That it not only keeps fowls in good health, but in the case of yarded growing stock it is quite as effective in promoting growth as is sour milk. While the elements of CHARC-OIL and milk are very different, I find their effect upon growing stock much the same.

To produce birds that when matured will have the capacity for high production and the quality to win in the show room, CHARC-OIL or milk is in my opinion almost indispensable, and in obtaining these results a one dollar CHARC-OIL investment is equal to more than double that amount expended for milk.

Yours truly,
(Signed). S. C. BABBLE,
Secretary-Treasurer.

Charc-Oil both prevents and cures White Diarrhea, Indigestion, Constipation, etc. "Charc-Oil will make show birds out of culls." Nothing like it

For Birds of All Ages, Sizes and Conditions.

Packed in Three Grades:

XXX Grade (fine) granulated for young chicks and ducks.

XX Grade (medium) for half grown chicks.

X Grade (coarse) for adult fowls.

Our Free Service Bureau

is in charge of Prof. C. A. Rogers, former instructor and investigator in Poultry Husbandry at the New York State College of Agriculture. All questions pertaining to the use of Charc-Oil will be answered promptly and gladly. Write today. *Don't delay.*

TRADE MARK
FOR YOUR CHICKS

Charc-Oil

For Growing Youngsters

is winning its way everywhere. It is our latest and best preparation, and there's nothing like it on the market. Clean, tasty and of a very pleasing odor. Poultrymen declare it to be the "missing link in chick raising," the "unequalled preparation for quick effective results," etc. So easy to use, too. No dosing or swabbing. All birds have a natural craving for it and they doctor themselves. It is sold on **sixty days' trial**—no risk. If after following the simple directions we give, the results do not prove our claims, we cancel the charge. Send for a pail or drum today.

KING REMEDY CO., 21 Elm St., Rochester, N.Y.

Ship me at once ___ 10 lb. Drums at $1.50 per Drum, ___ 25 lb. Drums at $2.50 per Drum, ___ 100 lb. Barrels at $8.00 per Barrel. Shipping charges prepaid. Guaranteed to tone up the layers—take them quickly through the moulting season and keep them free of all bowel troubles. To be paid for after 60 days' Free Trial, if Charc-Oil does as you claim.

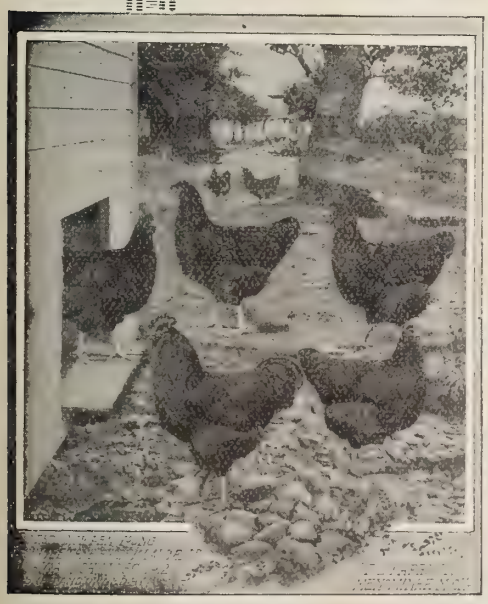
OTHER GOOD THINGS ON OTHER PAGES

F. H. HARRISON'S "ROYAL RED" SINGLE COMB RHODE ISLAND REDS



First Young Pen Chicago 1912-13, Royal Reds Hen won first, Young Pen Coliseum, Chicago, for the past THREE YEARS.

Hold the World's record for consecutive wins in the World's Greatest Red Shows. A record of 19 FIRSTS at the four last Chicago Shows where I have exhibited, while my nearest competitor won but one first is known to every Red breeder.

You should consider this Great Show Record before making the purchase of your This Season Show Birds or Breeders.

In the past three years I have won Special for Best Display in every show where I have competed. They are, namely: Colisum Chicago Show, three times; Greater Chicago Show; Wisconsin State Show, Detroit, Indianapolis, State Fair of Upper Michigan and Illinois State Fair. In addition to winning every special for best display at these shows, I **have Won a Total of 45 Firsts, while all competitors combined won but 6 firsts;** or in other words, I have won **45 Firsts** while my nearest competitor has won but one first. These facts have produced some knockers, but Royal Reds really have no close competitors.

CATALOG FOR THE ASKING

I raised the best Rhode Island Reds this year that I have ever owned.

F. E. HARRISON Box 30 MENOMINEE, MICH.

Vol. XX. HANOVER, PA., NOVEMBER 1915. No. 11

"THE UTILITY CRAZE"

The Real Meaning of the Word—An Analysis of the Present Situation—Discussion of the Subject in Three Chapters, viz: (1) In General. (2) With Reference To Market and Egg Types, and (3) With Reference to Fancy or Standard Bred Poultry—

Charles D. Cleveland.

THE poultry business is a billion dollar industry and it, therefore, embraces not only a vast number of breeders and raisers, but it also contains individuals with minds of all shapes, sizes and capacities.

In traveling throughout the length and breadth of the United States one will find poultry of one sort or another on almost every bit of inhabited land. There is everything to be found from a handful of the ordinary dunghill fowl to the modern giant poultry farm housing perhaps from twenty to thirty thousand birds. We meet persons whose sole desire is to obtain enough fresh eggs and succulent eating chickens to fill the wants of a small family and next door there will be found an individual or a company who aims to produce perhaps a million eggs and one hundred thousand day-old chicks annually. Just around the corner we come across a gentleman's wonderful country seat with immaculate lawns, wonderful shrubbery and perfect appointments throughout, while in the rear a costly and newly painted poultry house contains perhaps a dozen different varieties of fancy fowl. Again taking to the road and a short distance away we turn into a home of modest proportions and design where one or possibly two varieties of a single breed are actually produced in small quantities but to the highest state of show perfection.

All of the persons so engaged in raising poultry are doing so with a definite object in mind and with ideas—amounting practically to rules—for the conduct of their business. Each is trying to learn not only by experience but by reading and study. Each has his ear to the ground to catch the notes of approval or disapproval of the public. Each is eager for knowledge and wide awake to any development that may be for his individual advantage.

The breeder of strictly fancy fowl, that is the man who does not pretend or wish to make his poultry money through the sale of eating chickens or market eggs is constantly studying his particular variety and spending many hours at night in planning a method of mating up his birds so as to produce the best young stock possible. The farmer's wife with a handful of "mixed chickens" is carefully reading the Agricultural Journals in an attempt to discover the method of getting the most eggs throughout the most months of the year; the huge egg farmers are bending every effort to establish strains of hens which will give an average production throughout the twelve months that will exceed that of any other farm and will place their birds in the top rank as consistent producers. The man who turns out succulent and tasty fowl for the highclass markets is equally zealous in experimenting with crosses, finding new methods of quick-fattening, studying the best means of picking and dressing and is anxious to surpass his neighbor in his own field of endeavor.

Thus in all the branches of the poultry industry great progress has been made in the last fifty years in nearing a state of comparative perfection and the industry is now upon a high plain of efficiency and usefulness.

As must necessarily be in this great field of poultry men and women there are to be found a considerable number of persons who have been unsuccessful. They are unfitted for the work, either by nature or ability to succeed. Some of them are lazy and others have not sufficient intelligence to profitably carry on a business which requires so much both of hard work and actual skill—for the poultry business requires unending labor, considerable mental ability and some capital.

It is, I believe, among this latter class of unsuccessful, dishonest or unintelligent poultrymen that the word "utility" has been raised like a red flag to attract special attention and to help them out of the difficulties in which they find themselves.

In other words the term "utility" has of late years been used in a sense and with a meaning not really its own and has been given an importance and a sort of dignity which is not its right and which has been sadly misinterpreted by the public at large.

Let it be remembered that the public is thirsty for knowledge. It is easily deceived. It is ignorant of the real situation. It readily believes what it is told with comparatively little investigation and it is, therefore, in a position where it can easily be led into the wrong track and once headed in a certain direction is very hard to control.

It is extremely important, therefore, that the poultry public—the buying public—should see clearly and rightly before it enters upon an investment in poultry that

it receives the right and proper advice when it comes to the breeders and fanciers with the evident desire of entering this field, and it is perfectly manifest to me that a great many persons are actually "fooled" and mislead by the improper use of this term "utility." Poultrymen throughout the country seem to be set upon describing chickens as either "fancy fowl" or "utility poultry" and are apparently doing everything in their power to make a clear and distinct dividing line between what they call the two branches of the industry. In other words the public is told that fancy fowl are in one class and utility poultry in another class—no explanation is made as to what is really meant or what divides the one from the other, if there is any division. One hears constantly wherever groups of poultrymen meet discussions on utility breeds as distinct and separate from Standard Bred Poultry and particularly with what some men call "fancy" poultry. Exhibits of so-called "strictly utility poultry" are made at our shows and separate premiums offered in such departments. Men are described in the poultry world as utility men with utility farms and are contrasted with the breeders of Standard Bred Poultry as being in a separate and distinct class, practically unrelated with nothing to do with the Standard Bred poultry raisers.

Now the public, remember, is not "wise" to this situation. It really does not understand what these men are talking about, but it easily believes what they say and it naturally concludes that there are two kinds of poultry, utility poultry and fancy poultry, and it must make up its mind which distinct and separate class it desires to handle. It is told that it must make a choice between this utility and something which is described as not being utility; and that is where a large part of the danger lies and where the deception is made, whether such deception be intentional or unintentional on the part of those who give out this false information to the public.

I intend to discuss in other chapters of this subject the so-called utility chicken, both with reference to market poultry and eggs and with particular reference to Standard Bred or so-called fancy chickens, and will therefore confine myself very briefly in this article to the situation in general, that is, as applied to all poultry.

The word "utility" is defined to be "the character of being useful, usefulness, profitableness, state of being serviceable and conducive to some desirable or valuable end" and Jevons in his Political Economy says: "By utility is meant that property in any object whereby it tends to produce benefit, advantage, pleasure, good or happiness."

The underlying note in these definitions is—does the work tend to be useful, advantageous or pleasurable?

As applied to poultry it does not mean and never will mean "do your chickens lay more eggs than anybody's else's in the world?" "Do they weigh and dress heavier for their age than other poultry?" "Are they larger or smaller than any other poultry?" Are they different in color than any other poultry or are they a different form than any other chickens now known?" It does mean—Are the chickens which you produce useful for any purpose? Are they profitable for any purpose? Are they advantageous to use for any purpose? Are they pleasurable to you or give you any benefit, good or happiness—and will they do so to others?

This is the real broad meaning of utility and those whose sole aim it is to narrow the term down to a meaning and sense not intended—and not true—are really deceiving the public and raising therefore a slogan which they must be using for their own particular benefit and not for any desire to really help or guide those who are seeking to embark their craft upon the somewhat turbulent waters of the poultry industry.

It is perfectly clear that one thing may be useful for one purpose and another thing for a different purpose, but both may be useful, profitable and beneficial. The poultry business is no exception; one kind of chicken is useful for one purpose and another kind for still a different purpose, all fortunately are not intended for the same purpose nor can they be useful or beneficial in the same way. It is, therefore, improper to say that the breeder of fancy pigeons of the diminutive bantams is not in his own way just as much of a utility man as he whose fowl produces a million eggs a year. This is looking at the matter in a strict and proper sense, for it is well known that many a man's peace of mind and happiness and, therefore, his usefulness have been preserved and others greatly benefited from the fact that he has bred some beautiful variety of pigeons or bantams; and will it be said that under these circumstances he has not done something which is useful, profitable, serviceable or conductive to some desirable or valuable end? Has the man whose farm turns out a million eggs a year done comparatively any more useful act? Do numbers of eggs or pounds of flesh spell utility in the poultry business or do they mean that those who do not produce so many eggs or so many tons of flesh are not utility men in the real meaning of the word? Of course not. The word "utility" has a very broadbroad meaning and it embraces the whole field of poultry endeavor, in which field the public wanders like a child lost in the woods and seeking a ray of light to lead it home.

I do not desire to split hairs or to take a biased position upon one side or the other in this utility controversy, but merely to point out the actual state of the case and from my own personal experience, lasting now twenty years, to endeavor to make plain what I believe is a movement on foot by a certain class of poulttrymen to magnify, distort and enlarge the term "utility" to such an extent that the public will ultimately find itself in the wrong position and in a place where it must ultimately come back again for fresh advice and real information.

So let the public beware of false prophets in the land of poultry; let it think before it acts and let it disabuse its mind of the thought there are two distinct and separate kinds of poultry, "utility and fancy," for one is actually the same as the other. They both sprang and always will spring from the same parents. They are not distinct but one and the same and if any difference does exist it is only along the line of specialization. Let the public remember that because one man's birds lay better than anothers or because they are more full of meat than anothers does not make them a separate or distinct breed or variety. It does not put them in the so-called "utility" class as distinct from the other man's and it does not make them any better in the true sense of the word than originals from whence they sprang. They are simply along certain lines to their detriment along other lines. I myself carry a large number of what other people call utility Leghorns, that is these birds are bred with the special object in view of securing a certain strain which will year after year produce a high flock average of marketable eggs—with that sole object in view; that is I have ceased to expend any effort with these birds upon their minor fancy points. I do not care particularly whether the birds have combs with five or six points. I do not care particularly whether they carry their tails at an angle of 30 or 45 degrees. I do not care if their ear lobes show sometimes a little buff or a little red. My particular object in reference to these birds is to have them continue to yield a large number of eggs. Thus these birds are not as good in fancy or Standard Bred requirements as some others which I have of the same variety, and it is a good deal

THE PEOPLE'S SONG OF PEACE

The grass is green on Bunker Hill,
  The waters sweet on Brandywine;
The sword sleeps in the scabbard still,
  The farmer keeps his flock and vine;
Then who would mar the scene today
With vaunt of battlefield or fray;

The brave corn lifts in regiments
  Ten thousand sabres in the sun;
The ricks replace the battle tents,
  The bannered tassels toss and run.
The neighing steed, the bugles blast,
These be but stories of the past.

The earth has healed her wounded breast,
  The cannons plow the field no more;
The heroes rest! Oh, let them rest
  In peace along the peaceful shore!
They fought for peace, for peace they fell!
They sleep in peace and all is well.

The fields forget the battles fought,
  The trenches wave in golden grain;
Shall we neglect the lesson taught,
  And tear the wounds agape again?
Sweet Mother Nature, nurse the land,
And heal her wounds with gentle hand.

Lo! peace on earth! Lo! flock and fold!
  Lo! rich abundance, fat increase,
And valleys clad in sheen of gold
  O, rise and sing a song of peace
For Thesus roams the land no more,
And Janus rests with rusted door.

—Joaquin Miller

easier for me to bend my effort in one direction only, rather than strive to maintain all of the fancy points together with the ability to lay eggs; but that does not mean and never will mean that either myself or any other man cannot produce and continue to produce a strain of Leghorns which will have both the ability to lay a large number of eggs and all of the smaller points required by the Standard of Perfection. Such a strain can be built up and has been built up by many men and the fact that my birds like hundreds of others are not perfected in all respects does not entitle them to be called "utility Leghorns" as distinct from Standard Bred Leghorns; for please remember that they are all Standard Bred. They are all pure Leghorns. They are all line bred Leghorns. They are simply not show Leghorns because they have not been bred for show Leghorns.

This I believe is a fair sample of the true state of the case but you will find many men who will tell you that the so-called show Leghorns are not utility birds. They will state that because certain strains of Leghorns are bred to show that they do not produce eggs; and that there is where the fallacy lies, because such statements are not true and while these gentlemen no doubt believe they are telling the truth they are actually deceiving the public into thinking that because a certain man has a strain of Leghorns that are not good enough to show that they are therefore better for the people to buy than a highclass show strain.

If Mr. Jones who is about to buy chickens does not desire to breed a show line of Leghorns he can buy not quite such good Leghorns for less money and some of these Leghorns will lay as well and perhaps better than some lines of show Leghorns. On the other hand some so-called utility lines of Leghorns will not lay enough eggs to pay for their feed and again a highclass show winning strain will lay just as many eggs as the best Leghorn which can be produced. It all depends upon the interest which the breeder has had in keeping his strain up to the highest efficiency from the standpoint of eggs. If John Doe has continued to win in the show room for years and at the same time has successfully maintained his average egg yield—which he can readily—he has a much better lot of birds than the strain which has the ability to reproduce layers only and not layers which have all the show requirements. But the public is told that show birds cannot lay a large quantity of eggs and in most cases this is because the gentleman who gives this information has been unable to produce birds which have both of the desired requirements, viz: Show points and egg laying.

Thus it is very amusing, if the public will notice it, to see the plain errors that are made at every show in judging the so-called egg types. Men are constantly contending that there is a distinct noticeable length of the body which will necessarily lead to the production of more eggs than any other type of body and with this end in view the judge goes through an entry of so-called egg types and when he is through it is found that he has placed the first award upon the poorest layer of the lot, for while there are certain necessary requirements such as vigor and a generous capacity which are requisite to enable a hen to lay a large number of eggs, these requirements cannot be set down in hard and fast rules to mean that she must have a body of a certain length or of a certain shape. If she has the capacity in breadth, length or depth that is sufficient and these hens prove daily that the best of us may easily be deceived when we stand in our yards and endeavor to point out those pullets which will during the year lay the most eggs.

I am often asked on my farm "which are the best layers" and my invariable answer is that there are no best layers—it all depends upon the strain. There are Leghorns which will lay 50 eggs a year and Leghorns which will lay 200. There are Wyandottes which will lay as well as any other fowl and there are very poor layers among the Wyandottes. It all depends upon the care which the breeder has taken along egg laying lines as to whether his hens will be good, bad or indifferent producers.

A number of mongrel crosses have been extensively advertised in the press as being superior either from the egg laying market flesh standpoint, and hundreds of these birds have been sold to the unsuspecting public through these broad worded advertisements, but they are found not to produce themselves. Mongrels cannot reproduce and in the end the purchaser goes back discouraged to some other breeder for better advice or goes out of the business altogether. Let us remember in closing this article—which I must do for lack of further space—that when we talk about chickens we mean Standard Bred poultry. That is the only kind of poultry that can be depended upon to reproduce; that is the poultry from which all good chickens must come; that is the only poultry that is true to name and it is the poultry that for the future will and must be bred, and the beginner in the poultry business must make his choice what form or kind of

During the past few years the popularity of the Partridge Plymouth Rocks has been sweeping the country. Much of this yreat popularity comes from the fact that breeders such as Bird Brothers, Box J., Meyersbale Pa., have been succesful in breeding them true to the Plymouth Rock type. The above cut shows a male characteristic of their line.—J. T. H.

Standard Bred poultry he wishes to start with, either with a strain for eggs only or for eggs and meat or else a strain or variety bred both for the show room and egg production. He will invariably find that if he pays attention to the meat or egg side of his strain that these Standard Bred fowls will respond and that patience and care only are required to make any strain or variety of Standard Bred poultry just as good as almost any other strain of the same variety in both Standard requirements and ability to lay marketable eggs. It no doubt is true that some varieties of poultry lay more eggs or produce more flesh than others, but that does not mean the others are useless; that they have no qualities. It simply means that they are bred more for fancy points than for their egg production or meat production, and as stated above there is no one breed of layers and no one breed of market poultry and there never will be. There is no such thing as pure or distinct utility poultry when contrasted with Standard Bred fowl; one and all are the same and will continue to be the same as long as poultry is bred.

POETRY

It peoples the wilderness; it gives a language to the cataract; it talks to the everlasting hills; it hears harmonies in the gushing of the wind, in the heaving of the forest, even in the silence of the night; it sees shapes of unearthly beauty in the sunset; it draws inspiration from the stars.—George Croly.

MAINTAINING A HEALTH Y FLOCK

The Prevention of Disease Is Much Easier Than Its Cure.—Prof. H. R. Lewis

MR. POULTRY KEEPER did you ever stop to think that in the every day management of the poultry flock there is no one factor of greater importance than the maintenance of health? We constantly have our attention called to the occurence of common diseases and methods of cure; and owing to the ravages of these so called simple diseases much inconvenience and loss is bound to occur. More thought and attention spent on a knowledge and prevention of disease would result in continued benefit to all. More attention in keeping the house sweet and clean, in keeping the yard covered with growing vegetation, and more attention to maintaining the natural inherited physical vigor of the birds will be the quickest and surest way of insuring freedom from profit stealing diseases. Our efforts should be towards prevention rather than towards curing disease. The hatchet when used forcefully just behind the ears of a sick bird is probably the best cure, especially if the disease is of an infectious nature and if the individual is of small intrinsic value. The prevention of disease can be attained only by the maintenance of a sanitary environment. This means perfect cleanliness in all operations about the plant. All poultry diseases are similar in that the organisms which cause them flourish and multiply in nasty, filthy surroundings. Strong vigorous birds, kept in clean quarters will only rarely be attacked by serious disease giving organisms, and if such an outbreak should occur birds of this type kept under such conditions are better able to combat and throw off the disease before it becomes established.

Cleanliness Cleanliness Cleanliness

These three words should be placed in every conspicuous space in the poultrymans plan for managing the flock, for the maintenance of cleanliness means, healthy birds, which produce more eggs and meat, which sell for a great money return, which mean a greater profit; and profit is what we are in the business for. Cleanliness in poultry management applies in three distinct instances, which are clean yards, clean houses and clean birds.

A Green Crop In The Poultry Yard Is Invaluable

Every poultryman knows the necessity of locating his house on a sandy slope which is easily and quickly drained and which is dry and much warmer than a heavy clay soil. The house should be built on a slope so that perfect water and air drainage can be assured. No one would ever think of placing the poultry house in any direction other than South, in order that the interior will be sure to warm up quickly as it gets the early rays of the rising sun. Many mistakes have been made by not laying out large yards when planning the plant. Such yards are much more sanitary for they can be kept covered with a permanent sod. The birds have a large area over which to roam and the ground is not seriously contaminated except over a small area about the house, which can be easily plowed and seeded at frequent intervals. Where it is necessary to confine the birds to a limited area, some definite system of crop rotation should be practised which will necessitate the frequent cultivation of the yards and the turning under of the surface soil. Double yards are frequently laid out so that it is possible to practice some definite rotation of crops. A good scheme is to seed in one yard peas and oats early in the spring, keeping the birds confined in the other ward. When this crop gets about six inches tall the flock can be let out to forage on them, and buchwheat can be seeded in the bare yard. After the peas and oats are fed off the flock can graze on the buckwheat, while soy beans are put in where the peas and oats were. While the flock is grazing on the soy beans the remaining yard can be seeded to winter wheat and rye which will make a luxuriant growth during the fall and winter and provide early green food next spring. The frequent cultivation necessitated by the care of these crops maintains the yards in a sanitary condition. The yards should be completely drained so that there are no pools or stagnant water standing around on the surface as they are apt to breed filth and disease. Some shade in the yards is an advantage for it protects the birds from the hot rays of the sun during the mid summer.

Keep The Poultry House Clean And Livable

The laying flock, of necessity, must be confined to the house during the greater part of the winter, hence the necessity of keeping the houses and coops absolutely clean. They should be so planned and built that a congenial, sunny, dry environment will be maintained and they must be so managed that they will be kept in a clean condition. Dampness in the poultry house should never be countenanced for it enables and induces the multiplication of disease germs.

There are four factors which go to maintain cleanliness in and about the poultry house. First should be the necessity of making a general cleaning at regular times each year. Two cleanings are essential, one spring and one fall, while if the weather is bad and disease crops out, additional cleanings will be necessary. At this time everything movable in the pens should be taken out, swept clean and exposed to the sun for a number of hours. All litter should be removed and the

If the droppings are removed twice a week and the dropping boards covered with a good absorpent, freedom from red mites and offensive odors will be assured.

interior dry swept. The muslin curtains should be beaten to remove all dust and the glass polished so that it will admit of all of the sunlight possible. After the house has been dry cleaned, the interior should be thoroughly sprayed with a good disinfecting solution. An excellent solution for this purpose can be made by taking 5 quarts of rock lime, and slaking it with hot water to about the consistence of cream, to this should be added about one pint of Zenoleum and one quart of kerosene. This mixture should be thoroughly agitated and diluted with about twice its own volume of water.

It can be applied with a brush if a spray pump is not available, but the best way is to put it on with a force pump using a fine spray nozzle. In this way the solution is forced into the cracks and crevices and the disinfection is complete. This solution when properly ap-

plied accomplishes three things. First, the Zenoleum acts as a disinfectant, killing disease germs where ever they lurk. Second, the kerosene aids in destroying red mites while the lime whitens the house and makes the atmosphere more cheery and congenial. After the white wash has had time to dry, which usually takes

about two or three hours, the fixtures should be replaced, the floor covered with clean fresh litter, the nests filled with new nesting material and the house is ready for the birds. It is too often the practice to bring the pullets off the range and put them in the house in which the old birds have been running during the summer, without any adequate cleansing process.

There are two operations which must be regularly and frequently performed if the house is to be kept in this clean orderly condition. The first has to do with the proper removal and disposal of the droppings. They should be removed from the dropping boards frequently, twice a week generally being often enough. After each removal the dropping boards should be covered with some good absorbent and deodorizing material. Land plaster or acid phosphate are excellent for this purpose while dry loam and sand are also good. During long spells of damp weather in the winter when the droppings take up moisture and give off objectionable odors it may be necessary to remove them oftener. Do not use a dropping pit in the poultry house. This may save some labor, but the danger of spreading disease and the fact that it takes up considerable floor space which should be given to the birds, is reason enough why the elevated dropping boards are preferable.

Another important operation should be the proper care of the litter. The litter is placed in the house to hide the grain and to compel the birds to take sufficient exercise and it can only perform this function when it is deep, coarse, dry and clean. When the litter for any reason becomes finely ground and packed it should be loosened up with a fork, the finely ground material removed and additional coarse litter applied, when due to rain beating in or any other cause the litter becomes moist it should be removed and fresh supplied. At least twice a week it is a good plan to fork the litter, loosening it up and distributing it equally about the floor. A good plan is to start in the fall with three or four inches of straw on the floor adding to this from time to time fresh coarse material so that a depth of about eight inches will be maintained throughout the winter.

The last factor, which has to do with the cleanliness of the house, is the necessity of keeping the fixtures, such as drinking fountains, hoppers, feeding troughs, etc., clean. More poultry diseases are spread through the medium of the drinking fountain and dirty drinking water than in any other way. The drinking water furnishes an ideal medium for disease carrying germs to grow in; consequently the drinking vessels should be rinsed out daily and scalded at least once a month. The feeding troughs should be kept clean and if moist mashes are fed should be scalded regularly. Be sure that the mash hopper is so arranged that there is none wasted for such an occurence is not only wasteful and expensive but it leads to a dirty house as well. Systematic cleaning, proper care of the droppings, the floor covered with clean coarse litter and clean feeding appliances all go to make up a congenial healthy environment.

Clean Birds Are More Easily Kept Healthy

In order to maintain birds free from disease it is essential to keep a careful watch over the flock and to determine in the beginning any abnormal condition which may appear. A loss of appetite, digestive disorders, as measured by diarrhoea, eye or throat trouble or any suspicious condition should be immediately noted, the trouble determined and immediate measures taken to check its spread. In a normal healthy flock the removal of the cause will usually be sufficient. If, however, the trouble seems infectious and the weather of such a nature that it exaggerates the trouble, as is often the case with roup and eye colds, a method of flock treatment should be practiced to cure it. If a diagnosis determines the presence of a serious, contagious condition, all the infected birds should be immediately removed and the quarters thoroughly disinfected. In such cases it is usual-

ly best to kill and burn all affected birds. It is not a safe practice to bury dead carcasses for rodents, dogs and other animals might dig them up, scatter them about and thus open up new avenues for the distribution of the trouble. It is necessary to bury them, at least three feet of dirt should cover them. It is a very dangerous practice to throw dead birds in the bushes, even if at some

little distance from the plant, for they will be eaten and tracked around by animals. The writer personally knows of an instance where this method of disposal was practiced which resulted in the entire loss of a flock of over 1,000 birds. The infection was cholera, and it took but six weeks to ruin the business. Epidemics of cholera, tuberculosis, etc., are most frequently caused by carelessness in removing the diseased birds and not making proper disposal after death.

Clean birds are those which are free from body parasites. Lice and mites sap the vitality of the bird, lowering its normal resistance to disease and making it more susceptible to infection. Loss of appetite, loss of weight and a material reduction of production is bound to be the result of failure to keep the birds free from these minute organisms. In the case of both lice and mites prevention is much easier than eradication. The body lice are characteristic minute yellow animals which are found under the wings and about the vent in all fowls and are persistent little fellows. They stay on the birds all of the time, and hence are hard to attack. The best method of control is to provide suitable dust boxes in the pen which, if present, will enable the bird herself to keep the number in check. Such a dust box can be quickly constructed by taking two boards ten inches or a foot wide and about three or form of a letter L. These two side frames can then be set in the corner of a poultry house making the box about three or four feet square. In this box should be placed 6 or 8 inches of fine road dust or fine sand to which has been added equal parts of sifted coal ashes and some tobacco dust. If the box can be placed in a sunny corner so much the better. A normal flock if given such dust baths will usually keep themselves free from body lice, but if they still multiply rapidly it will be necessary to dust each bird with a good lice powder. Any good commercial make can be used and should be dusted into the feathers, using an ordinary baking powder can with the lid punched full of holes. The powder should be worked in with the fingers, the operation being repeated in about six or seven days in order that all newly hatched lice may be killed.

Hard at work spraying the interior of the house with a complete disinfecting solution which leaves it sweet, clean and white.

With red mites another different method of prevention and attack must be followed. The mites are blood-sucking insects which reside in the cracks and crevices about the perches and dropping boards in the day time and at night they flock onto the bodies of the birds while they are on the perches. In the morning, after they have filled up on blood, they return to their hiding places. The most satisfactory method is to spray the perches and roosting quarters with a solution composed of 50 per cent. crude carbolic acid and 50 per cent. of kerosene. The cracks and crevices about the nests should be carefully inspected and sprayed. The frequent removal of the droppings and the keeping of a good absorbant on the dropping boards retards the spread of these parasites. The nests should be frequently cleaned and fresh litter supplied. Body parasites of any kind are especially prevalent in hot weather, and it is at this time that special watch should be kept for them.

After the house is cleaned, dry, fresh litter should be placed over the floor and the shavings in the bag will be used to provide fresh nesting material.

Breed Vigorous Birds in Order To Insure Health

Healthy birds are the greatest asset towards the maintenance of health in any flock. This means that birds should be bred for vigor and that the chicks should be hatched from eggs laid by only strong, healthy parents. Few poultry diseases are inherited, white diarrhoea being the most noticeable exception to this statement. Most diseases are contracted after hatching time and the prevalence of infection is largely determined by the conditions surrounding the flock. In order to insure this individual vigor and disease resistance a few simple points must be appreciated and practiced. Strong healthy, well-mated stock should only be used to propogate future layers. Only hens which have attained full maturity should be used to breed from. The breeding stock during the winter and spring should be kept out in the fresh air as much as possible, should be given plenty of exercise, should not be given forcing feeds for excessive egg production and should be maintained in perfect health.

The egg from the time it is laid until the chick is hatched should be kept in an ideal environment. It should never be chilled, should not be allowed to get dirty and it should be kept in a moist condition to prevent excessive evaporation. During the growing period of the youngsters every effort should be made to keep them in a healthy, uniform condition to insure the proper development of their inherited vigor. Vigorous pullets in the fall go a long way toward making a healthy flock during the winter.

Cleanliness in all the operations of poultry management combined with vigorous stock will spell health and profit to any man.

"Everybody Reads Everybodys"

SUITABLE LITTERS FOR THE WINTER LAYING HOUSE

Furnishing Plenty of Clean, Dry Litter in the Winter Laying House Is One of the First Secrets of Winter Egg Production.—Willard C. Thompson.

DURING the blustering, chilly days of November nearly all poultry raisers like to fit up their winter laying houses and get their pullets and the selected yearlings into the quarters in which they are to spend the winter. Usually it is necessary to get as many layers into each pen as possible, thus necessitating care that the houses are in sanitary condition and the surroundings are such that the maximum health and activities of the flocks are developed and maintained. In managing laying birds for increased winter egg production there are several factors that demand careful consideration at the very beginning of the season. Among these things that influence the egg production of the birds confined within the laying houses are kind and quality of food, supply of fresh, clean water, proper care of dropping boards and nests, kind and condition of litter with which the floors are covered, and others, all of which should work together to put and keep the layers in active, healthy condition.

There are several reasons why the litter problem in the winter laying house is a particularly important one. In the first place, it is in the litter that the birds are scratching during the entire day except, of course, when they are on the nests. The exercise which they get during the cold, snappy days of the winter season is taken in the litter while they are searching for the grains scattered in it. The method used by nearly all poultrymen nowadays of scattering the grains in the deep litter to increase and compel exercise among the laying hens is one that has done much to increase the winter productivity of birds and keep them in better and more vigorous health. Birds brought in from the ranges where deep litter has been an unknown thing soon learn to scratch the straw apart in searching for their grain rations. The constant use of their leg and other muscles stimulates the circulation of the blood within their bodies, and this tends to build up and increase the capacity of all the bodily organs, particularly the organs concerned with the digestion of the food and the production of eggs. The quickened blood system keeps the birds warm. In the old types of houses it was thought that artificial heat was necessary to keep the birds warm. Now we realize that body heat produced by vigorous exercise is sufficient to keep the birds comfortable even during the coldest days, and is at the same time accomplishing other things that artificial heat cannot do. In houses where exercise is compelled by use of deep litter few birds will stand about in a huddled-up position; such birds have sluggish systems that have not been aroused to active work. In the second place, the litter problem is important because the food which the birds consume is in direct contact with the litter. The birds scratch in the straw and pick out the kernels of corn and wheat from among the bits of litter. In this connection the importance of clean litter is brought out. If there is filth and vermin in the litter in which the morning and evening grain rations are scattered, some birds, at least, are bound to pick up a certain amount of these foreign substances with their food. Continued consumption of such materials will lead to up-set digestive systems, and the digestive system is in one sense the key system of the birds bodies as troubles there affect other systems seriously. There is a danger, also, in old, unclean litter of birds taking in so many of the fine particles of straw, etc., that crop-bound conditions appear and tend to decrease the egg production. In the third place, the litter in a house may become one of the agents carrying disease producing germs and parasites of one kind and another. This should never be an argument against the use of litters in houses, as it is only neglected and carelessly managed litters that fall into this class. In the fourth place, and lastly, clean, well-cared-for, abundant litter improves the appearance of the poultry house and decreases the amount of labor necessary to manage the pens. In pens not provided with litter filth accumulates very rapidly and is more or less unabsorbed so that unsanitary conditions soon prevail. Birds become soiled in plumage and are not only ugly in appearance but dangerous carriers of disease germs such as are often found in droppings. The floors of such pens require almost constant attention, and yet we find many such houses on otherwise well-kept farms. Houses without a good supply of dry litter are damp and cold in the winter time, and injurious to the comfort and health of the fowls. Just a brief consideration of these four fudamental reasons why litters should be found in all good-laying houses gives us ample proof of why it is very essential just at this time of the year to think about what materials we have at hand or can procure for such purposes, how much it is necessary to use, and how often it is to be changed.

Requirements of a Good Floor Litter

Litter, in a poultry house, includes all materials used for the covering of the floors. The primary objects of using litters, speaking particularly of winter houses, are to make the floors over which the fowls are compelled to walk daily warmer, induce exercise among the birds, and

When corn stalks are cut up by the shredder they furnish an excellent litter for the poultry house.

help to keep the houses sanitary and clean. In order to accomplish these objects, which are directly related to health and egg production, litters need to have certain characteristics to fit them for use to such purposes. The floor litter must be deep. An inch or two of straw covering the floor can not keep the floor warm, nor will it induce the birds to scratch and exercise. At least six inches of good litter should cover the floors of the laying pens during the winter season. Then it is possible to bury the grains beneath the surface, and so thick a covering will materially aid in warming up the house. The birds will not be down on the floor itself, if sufficient litter is used. No matter whether cement, board, or dirt floors are in the houses, deep litter is essential. Eight or nine inches of straw is even better than six inches, because straw is comparatively quickly broken up and pressed down. Six inches of shredded corn stalks is enough, because such litter materials are not quickly broken up. The depth of the

litter will depend upon the kind of litter used, the number of birds kept together, the system of feeding the grains, and the cost and availability of the litter. On farms where the straw or corn stalks are raised deeper litter can be afforded than on places where all must be puchased. Other things being equal, make the litter on the poultry house floor as deep as conditions will permit, not exceeding ten inches, however. The floor litter must be dry. When birds are early buried in the litter scratching for their grain it is important that such litter be dry and easily scratched apart. If it is not, exercise is discouraged, grain is lost, becomes filthy and eventually moldy, and disease germs and vermin increase rapidly, for they require similar conditions in which to grow and spread. Damp litter soon becomes soiled and filthy, thus spoiling the appearance of the birds. It also soils the feet of the birds and this means that dirty eggs will be gathered from those pens. Damp, wet litter keeps the atmosphere above it laden with moisture, which the birds are forced to breathe in time after time, often resulting in bronchial toubles and other more serious diseases. Not only is that air apt to be damp and moisture laden, but there is bound to be more or less gas formed by the decaying organisms abundant in filth and dirt. The greater part of this gas is ammonia, and is extremely disagreeable when inhaled into the respiratory tract. The damp litter is particularly dangerous through the month of December when many birds are in the moult, at which time their bodies are very sensitive to chilling and excessive dampness. The floor litter not to be too dusty. There are some materials which, used for litter purposes, very soon break up and make a fine dust. This is driven into the air by the scratching of the birds and the result is that the air becomes laden with dust particles and respiratory troubles commence, as well as watery eyes and nostrils. Such a litter is fall leaves. In some localities where forests are plenteous leaves are used, and they will suffice, if they are put in rather green and are not allowed to stay until crumbled into powdery form. Some of the moss litters have this same objection. The straws from the oats, wheat and barley crops make litter which does not break up very quickly, also the shredded corn stalks. Sand is sometimes used, but the dustiness of very dry sand is objectionable. The coarsest sand should be used, if sand must be used. The floor litter should be absorbent. Litter should be able to absorb the greater part of the liquid part of the poultry manure as it is scattered daily about in the litter. Straw and corn stalks do this very well. The moss litters are more satisfactory absorbents, as a rule. The absorption of the average amount of moisture found in a litter tends to keep the house dry, the birds healthy, preserve the fertilizing elements of the manure, and not affect the atmosphere in the house. The floor litter should be cheap. It is not a good, economical policy to buy material for litter purhoses at high prices, if other arrangements can be made. It may be necessary to use a somewhat inferior litter that can be obtained very cheaply. Do not sacrifice all points for a few cents, however. The straws and shredded corn stalks and wood shavings are usually chaep litters.

The layers appreciate good, clean, dry litter, such as has been used in this winter house of Leghorns.

Materials Suitable for Floor Litter

On the average farm where there are several acres on which farm crops are raised each ye.r the problem of what kind of litter to use is determined largely by the nature of the field crops grown. If some of the small grains, such as oats, wheat, rye, or barley, are grown, very pobably the straws from them will be used for litter in the poultry laying houses. Oat straw makes a very good litter for the laying house, because it is free from the beards common in the barley and wheat staws, is bright and fine quality, usually being more leafy than some of the others. On some farms the whole oats plants are harvested and used, the bords being allowed to thresh the grain from the heads while scratching. In other places the oats are threshed and the pure straw used. The practice of using the whole plant is good from the poultryman's standpoint. Wheat straw is a good litter also, being like oat straw in many ways, but containing the beards which sometimes prove a bit troublesome, although the presence of the beards probably aids in the absorption of the moisture in the manure. The same is true of barley straw. Rye straw is usually somewhat longer and coarser than the other straws, but this is a slight objection that is not of importance. When stram is purchased on the market it is often easier to obtain rye straw than any other. All of the above-named straws are bright yellow in color. Another straw that makes a satisfactory litter in many ways is the buckwheat straw. In yards where buckwheat has been sown late in the summer as a source of green crop and cover crop there will likely be some to cut and use as a litter in the winter. This straw is usually shoter than the straws from the other cereal grains, and is dark brown in color. It is also somewhat more brittle and is broken up quicker, thus not being as long lived as a litter as some of the other straws. It is bully and loose and when carefully managed makes a good litter. It is economical also for the poultryman to use the unthreshed buckwheat, as he may the oats or wheat. Buckwheat grain is something like corn in its nutritive value, being a starchy food. Soybean and cow-pea straws are sometimes available for litter purposes, and can be used for a short time, but as they are very brittle and easily broken up they will need to be changed oftener than most of the others. If there is a

Shavings have been used in this cockerel house with good results.

supply on hand, it would be well to make use of them for such purposes, as they are weak in feeding value, being much better suited to bedding purposes. Shredded corn stalks make a very good litter in which to scatter the grains for laying fowls. They are not quickly broken up and last for a long time. They are very dry and absorb a large amount of water, because of the nature of their materials. The spongy pulp inside the dried corn stalk absorbs a large amount of moisture, and the dry leaves and husks also take in considerable water. The shredded corn stalks do not become as dusty as the straws and mosses. Corn stalks, without being shredded, are used as litter also, but where the growth has been rank and coarse the stalks are too large for the fowls to move about and the result is that the effectiveness of the litter is lost. Where shredding machines are available to cut up these stalks into pieces about two or three inches up to seven or eight inches in length the finest of litters can be made. There will be more or less corn shelled into this shredded fodder which will cut down on the food bill for a time. Old hays not useful for animal feeding can be utilized as litters in the poultry house. The fowls will get much value from the leaves of the hay and fine seeds in it, as well as benefits from it as a litter.

Aside from the straws and fodders available from the harvesting of the farm field crops there are other important economical sources of litter for the laying houses. Among the most important of these is wood shavings. Shavings are the by-products of saw-mills and planning mills where lumber is made. As a rule in most localities the shavings are very reasonable in price. In the writers locality they can be obtained at five dollars per ton, and they are very light and bulky. Shavings are valuable when used in conjunction with any of the straws, making the litter lighter and more absorbent. Use half shavings and half straw and better results will be obtained than when either are used separately. As a litter for nests, shavings are unexcelled, because they are dry and retain the shape of the nest well, not hiding the eggs beneath straws, nor twining about the legs of the layers causing them to break up nests and break eggs. In particularly moist seasons, as in late winter when the spring rains set in, shavings should be used in the laying house. They are clean and prevent dirty eggs to a large extent. Shavings are sanitary also, the wood juices being somewhat antiseptic, it is believed. Other than wood shavings there are several kinds of dried peat mosses that can be utilized as poultry house litters. These are all very absorbent, light and bulky, but the main objection raised to them is their tendency to become dusty quickly and the color, which is dark brown or black. The latter objection is made by raisers of white birds, particularly. The extreme dustiness of some of these moss litters is responsible for running, watery eyes oftentimes. Mixed with wood shavings they are found more satisfactory by many. In sections of excessive moisture they can be used with good results. Sand and earth are also used as litters, particularly where there is no cement or wooden floor. The main objection to either of these is the dustiness which is unavoidable when the sand or earth becomes very dry and is being continually stirred up. They are less sanitary, as disease germs can work their way down into the soil easily through the top litter, so-called.

When To Change The Litter

There are a few simple rules that in general govern the time that litter needs to be replenished or changed in the laying house.

1. Change the litter when the old becomes very finely divided and dusty. This will vary with the number of birds in the house, the methods of feeding the grains, the nature of the litter and weather conditions.
2. Change the litter when the old becomes filthy and laden with manure, so that the odor is bad and the birds become soiled when working it it. This also depends up on the number of birds in the house and the kind of litter used, as well as weather conditions.
3. Change the litter after bad storms when the rain has beaten in. Never allow wet litter to remain in the laying house. Colds will start immediately and pneumonia follow, if it is left there.
4. Change the litter once in a month or six weeks on general sanitary principles, particularly if there is any trouble from lice or other vermin in the house.
5. Add new litter to the old when the old is not very dirty, is not moist and tough, and is not too dusty.

Be guided, in general, by the appearance of the litter and the birds. If an outbreak of disease, especially if contagious, occurs, change the litter at once and disinfect the floor.

The Litter Problem In A Nut-Shell

A. Use any good available litter.
B. Use plenty of it.
C. Keep it clean.
D. Keep it dry.
E. Bury the grain rations in it, inducing exercise.
F. Change it when dusty, dirty, moist, or parasite laden.

POULTRY BIG ITEM IN NATION'S WEALTH

Government Returns Show That the Industry Ranks High With Cereal Crops—Farmer Main Producer—If Business Is Conducted On Sound Principles There Is Always Fair Profit.—J. Harry Wolsieffer.

THERE have been many failures in the poultry business and much disfavor is the result. Many people say that there is no money to be made in the poultry business. This statement can be given much credit, judging from the experience of many poultry men, past and present. Many other experiences would indicate that the statement does not deserve much credit. There have been many failures, but success has crowned the efforts of many. If success be possible for one, or if a great number can succeed, it should be pretty conclusive evidence that success is possible for those who apply methods similar to those for the successful.

Many people look upon the poultry business as being a huge joke. That it is only a woman's job, entirely too insignificant for the attention of men. This idea is not so prevalent as it was a few years ago. Nevertheless, the idea still exists. Statistics prove that if the poultry business is a joke, that it certainly is a huge one. The farm production of poultry of the United States for the year 1912, represents about the same cash value as wheat, and greater than the oat crop. This is a wonderful showing, considering that the average farm flock receives no particular attention. The farm flock represents about 86 per cent. of the poultry produced in the United States. It is not likely that the census report of the Department of Agriculture on poulty is anything like correct. It is hardly possible that it could be. The average family which produces its own poultry has but little idea as to the amount of poultry and eggs consumed by the family in the course of a year. They keep no account. When eggs are wanted they use them, and the same is true when a fowl is wanted for meat. At the end of the year it is only a guess as to the amount consumed, and the amount consumed by the family is so much greater than is generally supposed that there can be no doubt but the census report is much below the actual production, owing to the under-estimation by the producer. Many families consume more of their poultry production than they sell, and do not realize it.

From the Year Book of the Department of Agriculture of 1912, speaking of the farm value of live stock produced during that year, poultry is an industry of great wealth production on the farm. It is an immense aggregate of little things. An egg may be worth only a cent and three-quarters, and yet 1,700,000,000 dozen eggs are worth $250,000,000, and these are the estimates of 1912. If to the value mentioned is added the value of the fowls raised, the products of the poultry industry on the farm should amount to about $570,000,000. This is nearly equal to the value of the wheat crop. It is more than three-quarters of the value of the cotton lint produced in 1912, and exceeds the value of the oat crop. The value of poultry products in 1912 has been exceeded in two former years.

It can readily be seen that even though the poultry business is one of small unit value, in the aggregate it represents a large sum. It is estimated that the farmer produces about 86 per cent. of the poultry in the United States. Add to the farmer's valuation of $570,000,000, the production of the pure and fancy breeder valued at market price, and the valuation of the United States would be enhanced by nearly $80,000,000, a grand total of $650,000,000. The wheat crop is estimated by the Department of Agriculture for 1912 at $596,000,000; oats, at $478, 000,000; corn, $,759,000,000; cotton, including seed, $735,000,000. The grand total production for 1912 is estimated to be $9,532,000,000. This amount of wealth has been contributed to the nation in one year by the soil and by the farmers' live stock.

A study of these figures will readily indicate the importance of the position that poultry occupies when considering the production of the nation's wealth. The man or woman who handles a small flock of poultry need not feel abashed, but should feel their importance and feel encouraged to greater efforts. The estimate for 1911 was $750,-000,000. Early in the season of 1912 at hatching time poultry men all over the country predicted that there was a sharp decline in production. The Government report indicated that the breeders' early pediction was correct. Probably the decline has not been so great as the eport indicates. There has been more poultry consumed by the producer of late than formerly. The high cost of living is responsible for this.

Poultry is the cheapest meat that the producer can consume. The average price for poultry, taking the country over, is probably about 13 cents per pound. This would be commission house prices, and not always what the farmer receives. Other meats run higher. At this time there is no indication that meats other than poultry will be much lower. The purchaser figures that in poultry he has a fresh, wholesome food and that it is as cheap or cheaper than beefsteak. The high cost of living is a strong argument in favor of an increased poultry production. There is not the great profit in poultry that is claimed by some. There is always a fair margin in poultry if conducted along proper lines. If the poultry business is properly conducted it will give better returns for the money invested than any other branch of agriculture, and the outlook, not only for this year, but for years to come, is bright for those who wish to make a living by growing poultry for eggs and meat. Each year the consumption will be greater and always at a fair living figure, and the many successful poultry raisers in every State in the Union bear this out, in spite of the much-heralded failures one hears about.

THE BARRED PLYMOUTH ROCKS OF TODAY

Chapter II.—A Review of the Early Birds and Progress Made—How Obtained—Present Day Qualities Are Results of Breeding For Type, Color and Barring With Breeding Values Assured.—H. P. Schwab.

IN the previous chapter we have given the history of the origin of the Barred Plymouth Rocks without comment on the quality or of th shape, color or barring attained by the early breeders. The fact is, we would rather leave this to the imagination of the reader, and will in part, for our connection with this variety dates back only to 1883 up to which time no doubt great progress had been made. The early writters have failed to lay any special stress on this subject of shape, color or of barring, therefore to some extent we rely upon the pictures handed down from the artists from which to draw conclusions.

Shape of the Early Birds

As we now remember the Barred Plymouth Rocks of 1883, they were with comparison of the birds of today a rather crude affair, fuller and rounder in body, as well as shorter and deeper, the variations in shape were wonderful to see, each seemed to have a type and style of its own, which was partly due to the difference in shape and carriage of tail. In this respect of variation they were without competition, long legged, long necked with massive heads and combs, heavy tails, supple though compact bodies, they were veritable giants in size, reach and attractiveness. The reason for all this was found in their ancestry, for never before nor since were such a conglomeration of sizes, shapes and varieties blended into one with hopes for success in breeding refinement.

Color and Barring of the Early Birds

With these variations of shape, now try to also imagine the variations in color and barring, styles of barring, etc. Color that was very superior in quality was had in many specimens in the early days, but it was quite unreliable and its infrequency of appearance most noticeable. It is our opinion that a very small per cent. of the birds prior to 1880 had the delightful clean barring wished for. Of the barring the white bar was the superior one, its sharpness and cleanness was commendable, although it was out of all proportion in size and width. The dark bar was the particular one of truble, and for all time the one that has given the breeders the most anxiety. That it was dark is true, but with it were its peculiar leanings to other shades and colors, mainly brown and purple. Brown has many shadings and covers a wide range of color effects, from a near red to a near blue, and all these shadings with more or less foreign colors without one single exception was had in the dark bars of the males and females.

In the male, brown, purple, metallic and brassiness with washed-out necks and wing-bows, light tails and white sickles were the leading obstacles noted, while in the female brown, purple and metallic with several shadings of other colors, and with wash-out, coarse breasts with black wings and very dark legs were the particular defects.

Barring has always been and always will be the feature of the variety; it is this barring that determines their variety, the quality of which has been the one of three important questions for improvement. The specimens of the early days were as irregular in barring as can well be supposed, the barring itself was mainly of the saw-tooth or V style in the males, and of the half-moom or curved order in the females. A proportion of the individual barring in sections of some few birds was good, but evenness and regularity in barring was unknown and partly at least unthought of. Under-barring was in those days, as now, appreciated and considered one of the important factors in breeding value, and in proportion to surface barring was superior in regularity and strength, although not in cleanness. It was of the heavy order, cloudy and not as good in the females as in the males.

Regarding the color of the early Plymouth Rocks, Mr. N. D. Forbes, contributing to the "Poultry Yard," under date of February 28, 1885, says:

"Ten years ago I found the Plymouth Rocks, as a breed, in a most unsatisfactory condition, for the fancier, or anybody else, to handle; they bred true to but one condition, namely: the old-fashioned hawk-color, called the Dominique in America and the Cuckoo in England; and even this was in all shades which the tastes of hundreds of breeders and originators could conceive. Nearly all pullets came dark, some smoky. It was rare to see good yellow shanks on females until the second year, and a pure yellow beak on either sex was rarer still. In plumage the cockerels were as diversified as the pullets—perhaps more so. Very seldom were they seen light in color without having white sickles, nearly white hackles, saddled and wing-bows, while a brassy tinge was a natural accompaniment. In both sexes the markings varied from regular bars to spangles and splashes, while feathers on the shanks were common in some families."

Standard Changes

With all fairness it is due to state here that in those early days the demands of the Standard were not as exacting as they now are. As time passed and the variety was being gradually improved the Standard for them was also being changed and improved with an ideal in shape, color and barring in view. The early defects

were known and improvement was demanded by breeders and Stanard makers alike. Year by year progress was made that was beneficial, and with the result that we have in them today a variety of which all concerned can well feel proud. The progress achieved is truly wonderful. From the crude and ungainly to the beautiful and refined with greater quality and more practical worth today than at any former time. The lines of these improvements made were all based upon value to the breed, the breeders and the poultry industry in general.

The Up-to-Date Barred Plymouth Rock

That the Barred Plymouth Rock of today is superior in practical as well as in Standard requirements to that of former years is an undisputed fact. In shape mainly do we see cause for this statement. The Standard shape now demanded is, in our opinion, the one nature intended for them. It naturally fits them, and with this obtained we can surely expect the best possible breeding and practical results. The long, deep, broad and full bodies, carried on well set, proportionately strong legs, with an unabused constitution, a hardiness and vigor that was always a characteristic, insures for them ever a favorable consideration with any variety as the best and most reliable general purpose fowl, and an assured success in poultrydom.

With their natural form attained to a degree where it breeds true to ninety-five per cent. or more we can look upon the past with much pride for work accomplished. The same can be said of color and barring, for both are had today to a degree beyond our fondest hopes. The brown, metallic and all foreign colors have been eliminated; in their place we find absolute white and dark bars, sound, bright and clear, sharp and snappy, showing to the highest possible degree the contrast in them. Surface barring as seen today is of rare beauty, the straight, even, sharp cut bars in all sections, of an almost equal width, well show the progress made. In both color and barring one of the most important qualities is to have evenness from tip to tip, for in this lies the quality of even strength in breeding, a feature of greatest value. Under-barring has also made the same progress. This we find today is consistent with the surface color and barring it is narrower, straighter and cleaner with a contrast of extreme value between the light and dark bars.

Object of the Originators.

There is not a particle of doubt in mind but that the originators had a definite purpose in view when they made their first and subsequent crosses, and that this purpose was the Barred Plymouth Rock as we have it today, for in their make-up there must have been a general natural blend that harmonized the shape and made the color and barring fit. Had this not been the case, the breeders would have worked for generation upon generations to obtain the results that fifty years have given, even then perhaps would have met with failure. Be this as it may, I believe it true, the fact remains that we have in the present day Barred Plymouth Rocks a variety unsurpassed in breeding and reproducing qualities, one that breeds as true as any known variety, as well as one of the greatest possible popular interest that is now being bred in its purest blood lines by over 100,000 poultrymen the whole world over and in a high grade quality by a million more.

Breeding Values

This result of true and substantial type and color breeding has been had by the fullest study and greatest care in selecting breeders. They have the type strongly stamped beyond question, while just the right shade of color and the proper barring are being gradually and yearly improved with the assurance of permanent quality progress so that the type of barring has been firmly established. Just what these are and should be will be handled later, for it is only our object here to stamp on the reader's memory that all we have is the result of having bred along proper lines with proper methods, that breeding for shape and color has given us shape and color and barring, and that now with the quality stock in hand, it will be much easier to improve and to breed higher if the same sane methods are used. No animal has ever proved of particular value unless its breeding and reproducing qualities were of the best. With this assurance in the Barred Plymouth Rocks we can look with confidence upon their future, for all they have, and all that we hold dear and of value in them, is the direct result of breeding and of breeding value.

Hardiness and Early Laying Qualities

The early Barred Plymouth Rocks were freely commended for their size, hardiness and great laying qualities; if these were traits with them then, they are their virtues now. Let me place special stress upon these facts now for their importance is of superior value and worth in the just consideration of the variety. They possess the merit of hardiness which, combined with their useful qualities, have had as much or more to do with their general popularity as their fancy or beauty charms. They are probably the most perfectly adapted to all climates and conditions of any Standard-bred variety. Their thrift is of the greatest, while their native superabundance of strength and consequent freedom of ordinary ailments make them all that is desired in profitable poultry breeding.

The fowls for general use and greatest practical worth must unite with these good qualities as layers and mothers, other qualities that go to make the best general purpose breed are quick growing, early matuity with consequent early laying capabilities, all of which are the direct results we can expect from natural vigor and hardiness of constitution. The union of totally distinct forces and the small amount of in-breeding which has been resorted to make the Barred Plymouth Rocks a variety with the strongest and best constitution with a full share of prepotency, which insures abundant and virile reproduction for time to come.

Regarding the quality shown by the early Barred Plymouth Rocks, permit me here to quote from a contribution to the Poultry World of March, 1876, with regrets that the writer's name is not given:

"I am a subscriber to your paper, and read a short time since an inquiry in regard to the number of eggs the general average of hens would lay in a year. This is my experience with eight hens, breed Plymouth Rocks. The first of September, 1874, I purchased from E. Smith, Wolcottville, Conn., eight pullets and one cockerel, hatched the last of June. The first egg was laid on the 20th of November, and there has not been a day since, up to November 20th, 1875, but that I have had eggs. I have not allowed them to sit, and no one has stopped laying more than a week from wanting to sit. The total number laid was 1,841, an average of 230 each. I have fed them wheat except during the coldest weather, corn at night, when the days were longest. I consider them the hardiest fowls raised. I have about a fair average place to keep them; by no means an extra good one. I have never cooked any food for them, nor given them anything warm in cold weather. They have been fed regularly, given fresh water twice a day and have access to scrap and fine oyster shells always. I keep them shut up all the while, except an hour every two or three days, when they have the liberty of the door-yard."

F. H. Corbin, in his book Plymouth Rocks, issued in 1879, gives the following regarding the productiveness of the Plymouth Rocks:

"We have the statement of the Rev. J. M. Bates that his Plymouth Rock pullets in 1878 laid at the age of four and one-half months. They also averaged 225 eggs each during the following year; and one of them laid seven eggs in four days; that is to say, three out of the four eggs had double yolks.

"In 1878 J. S. Pollock had five Plymouth Rock pullets which laid before the age of four months, viz., one at the age of three months and twenty days, a second at three months and twenty-three days, a third at three months and twenty-seven days, while the others laid at the age of three months and twenty-eight days.

"On the 20th of May, 1874, S. F. Peck had one Plymouth Rock cockerel and eight pullets, and from these eight pullets he obtained, during the succeding year, 1,841 eggs; an average of 230 each, which at thirty cents per dozen would amount to the modest sum of $5.75 per head.

"Now, if we estimate the feed at $1.25 each, which is a liberal allowance, we shall find the profit on each hen or pullet to have been $4.50; or on all, $36.00; proving, conclusively, that where proper attention is given, a good breed of fowls will pay better than anything else bred or raised on the farm."

We could quote more along these lines if necessary, for boks and the poultry journals were well filled with accounts of the great quality possessed by this new wonder of poultry, the Plymouth Rocks.

The Progress Made

The progress made in the Plymouth Rocks has in the main been gradual, steady and reliable. Improvements in color and barring, as well as in shape, once attained, were carefully guarded and nursed along to bet-

OUR GUARANTEE

We guarantee every subscriber against loss due to fraudulent misrepresentation in any display advertisement appearing in Everybodys Poultry Magazine providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in Everybodys Poultry Magazine and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it comes.

Fifty cents the year. Three years for $1 in U. S. and Mexico. Canada, 25 cents per year extra. Foreign countries, 50 cents extra.

A renewal blank will be inserted when subscription expires.

ADVERTISING RATES ON APPLICATION

SAMPLE COPES sent free to all interested. Subscription agents wanted.

Manuscript and copy for change of advertisement must be in our hands promptly by the 10th of the month preceeding date of issue. New business can be accepted to the 20th, but no special position can be assured.

WHEN WRITING ADVERTISERS MENTION "EVERYBODYS"

At a conservative estimate, there are a half-million of farmers and poultry keepers in the United States today that keep and raise chickens of the mongrel sort. With these a chicken is a chicken only, one as good as the other, and none better than the rest. Year by year they are bred and inbred with now and then a "swap" of roosters, made usually for generations with the same neighbor for new blood (?) and with the result that the average for the "Great American Hen" is about three pounds in weight and her product averages seventy eggs per hen per year, and all this in 1915.

When we consider this condition, along with the possibilities that Standard Poultry Breeding offers, we can well ask—What is to be done? It is clearly evident that the majority of people who keep poultry for various reasons don't consider the improvement of their poultry the same as they do other stock kept. The average farmer is well versed in the different breeds of horses, cattle, sheep and hogs, and if not to the extent of breeding "Full-Bloods" he breeds a high-grade stock, finding in them profitable results.

Now if we can only get him properly interested in his poultry, to investigate the special values of Standard-bred-varieties, he will find he has overlooked the best paying branch of live-stock breeding. Poultry, whether bred for fancy or for practical commercial purposes, offers an unlimited field to the breeder, and the higher quality the stock, the greater are the opportunities.

That the best results for all purposes are obtained by high-grade standard breeding has been conclusively proven. Similarity in type, size, color, etc., warrants the best prices for market poultry, while such types bred to standard requirements are the only ones to rely upon for regular and consistent egg production, with re-productive qualities.

Those of us who appreciate life and their conditions, and those who have the satisfaction of contentment backed by knowledge that their efforts have made possible their happiness and their success, will gladly welcome Thanksgiving day. The spirit of the times is one of appreciation. Neighborly interest is greater and the general success is more and more considered as the prime factor for a sincere and hearty Thanksgiving celebration.

The Poultrymen have every reason for giving special thanks, as the future holds every prospect for improved conditions for better stock, for profit insuring prices and for a greater demand for the stock they have bred with so much care. The Farmers have harvested the largest crops in record and every line of endeavor will be benefitted by these facts as time will show, so let us be very thankful one and all.

Now do not let us overlook the "Peace" which we as a Nation enjoy. Our President has safely guided

our Ship of State through troubled questions to a harbor of "Eternal Peace." Let this be our hope while giving thanks on this 1915 Thanksgiving Day.

The displays of poultry, Old and Young, singly and in pens, at all shows, has been a factor of immense value to the industry. Yearly the exhibit has been increased and improved, keeping pace with the interest displayed by the public. Poultry, Waterfowls, Pet-stock and Pigeons under proper classification has made these exhibits what they are, backed by the interests of a great host of breeders and fanciers. Many of the Associations, to make the exhibits of greater practical value to the public, have added classes for the display of Eggs and Exhibits of Dressed Poultry, Squabs, etc. This is a feature we commend, and hope that every poultry association will take up this question and complete their show by having classes and offering suitable prizes on Eggs and Dressed Carcasses, this is in keeping with the general progress hoped for.

Our exhibits, as now held, are a credit to the breeders and their interests. But they are not complete and do not interest all the people all the time, nor are their benefits to the industry all that they are capable of, unless they combine a practical display of eggs and dressed poultry in variety with prizes awarded.

For years we have noted, at all exhibits when eggs were shown, a particular interest in this exhibit, we dare say that half the people who attend the average show are just as much interested in the proper color, size and shape of eggs, as they are in the variety that produced them. Production means results, and product with gain has its particular charm for all of us alike.

The same well applies to dressed poultry, the beginner in poultry breeding, as well as the farmer, who has just kept "chickens" will find general interest, exhibit and attend the exhibits when eggs and dressed poultry are shown; they want to be shown, learn all the new wrinkles when they will be the first to observe the advantage in breeding better and Standard-bred stock for both eggs and market poultry.

We are anxious to see our poultry exhibits broaden out, to cover the entire field and to extend their influence over every interest of poultry and egg-production. The associations that have put on these displays, have profited by them. The New York Shows, Buffalo, Philadelphia, Boston, etc., have featured this to some extent and there can be no questions of the improved general interest they create. Our varieties of Standard-Bred poultry have quality that should be shown in all its states, particularly as the beautiful exhibition bird, as layers and as dressed poultry finished for the table.

MAINTAIN VIGOR

The profitable breeding and production of poultry is primarily due to several "main" causes and conditions, but, to none more than "vigor." The breeder who will look to vigor in his stock, first and last, will have the first requsite of a dependable foundation upon which to build for all time to come. Maintain vigor, improve it as your first desire and let no other perfection replace it. Vigor not only has its special value in the present, but in the young to come and for time to come. Your stock will grow better, lay better, and pay better when the full strength of vigor is back of all.

* * *

UTILITY-POULTRY

We wish to specially refer our readers to the "Utility" article in this issue, from the pen of Mr. Chas. D. Cleveland. Also to his other articles to follow Later we expect to comment upon these for we feel that this is one of the questions of the day, one of great prominence which is misunderstood and is being misused by many breeders. These are utility lines and we urgently favor utility breeding along standard-bred and quality-lines. But we do not favor the idea that ability to produce eggs is the only necessary factor. Much more is to be considered and we hope the poultry-growing and buying public will carefully consider Mr. Cleveland's articles and others to follow.

* * *

MEAT POULTRY

At an exhibit lately held, we noted a class for Meat Poultry, with several coops filled of this (?) quality. Here were all sizes, shapes and colors, evidently a conglomeration of every possible conceivable mixture of breeds and bloods imaginable. If there is really meat poultry, with the backing of an association or a superintendent to recommend it to the poultry breeders in general, then we want to draw a close and sharp line on this practice right now.

This in fact is part of the utility question, and we are assured, as often before stated, that standard-bred poultry has no real competitor where or when utility is considered in all its phases. Here again the breeder, and those interested in poultry, should look at this and consider it in a broad-minded way with plenty of liberality toward those who have the idea that poultry of the kind shown and referred to has any special qualities. The people have been hoodwinked before now, but we do hope they will not fall for this latest and greatest of all fakes.

* * *

POULTRY CONDITIONS

Our business this Summer and Fall has taken us over several thousand miles of travel, East and West, visiting the breeders and the leading Fall Shows from every view-point, and in every section poultry business and conditions are "looming up." In this connection also, we have received a letter from Mr. Grant M. Curtis, President of the Cyphers Incubator Co., giving a consensus of the reports received from their agents throughout the country. This is good reading and appropriate at this time for it is consistent with conditions as we have found them. Read Mr. Curtis' article and keep boosting.

* * *

EVERYBODYS PROGRESS

It is always a pleasure to refer to the progress "Everybodys Poultry Magazine" is making. It is very evident to us that "Our Friends" are of the right sort and are boosting strong and hard, all the time for our success. Words fail to tell of our appreciation and we can only say—We Thank You All.

During the month we received just 7140 new subscribers, which places our circulation up with the best of them, for this circulation is "New." We have no dead-heads, and we are making more than good for our Advertisers.

To say that we are pleased with conditions is expressing it mildly. The results we have aimed for: viz., "To have Everybodys of value and a credit to the Industry" have been achieved to some extent at least. But we are not satisfied, we see greater possibilities ahead and will not rest until in fact and purpose Everybodys will be the acknowledged popular Poultry Magazine for all breeders and fanciers all the time.

Keep "Boosting Everybody's" for we are there to Boost and to defend every legitimate poultry interest.

DO NOT

Leap to the conclusion that "Everybodys" is the best advertising medium on the strength of what others say. Try it yourself.

BETTER THAN THE BLUE

E. O. LEHMAN

To all but the "dyed in the wool" fancier the winning of the Blue, a special or two, or if the competition is hot, the Red or even a place further down the line, the selling of a fair lot of stock at a good round price, a good season of egg sales and a year with the books showing a fair profit seems to be the acme of success. But, is it?

Let us take the case of a small breeder for our subject. If he is a true fancier he may in the course of a year attain all that has been mentioned—for the profit he must of necessity have had a good hatching season, few brooder losses, steady growth of chicks with all the luck in his favor that usually falls to the lot of one who places a big capital P before the luck, and then suffer the keen pang of disappointment in his year's work. You say, "Why?"

His little flock is now going into winter quarters, culling all through the season has been close and he stands among his young fowls a disappointed man. Not a cockerel or pullet in sight that gives promise of being as good or better than its sire, not one better than that beautiful hen that won the Blue last winter, not one that can approach that grand male that as a cockerel took the color special.

As a true fancier he feels the lack of progress but looks ahead, tries again and seeks the fault wherever it may lie. Why did he fail in that "number one" mating? Was his judgment all wrong? or was that prize-winning cockerel that presided over his choice hens lacking in prepotency? All of this he must find out if he can. He has no time to fuss around about it now for it means harder work than ever, more thought and care if he would make up for the time lost.

Then again, just take the other result, the desired result. Rounding up his choice youngsters he casts his eye about for the cockerel, now nearly standard weight, that has had his attention for some weeks. What a gleam of satisfaction brightens his eye as he notes the shape, the color, that snappy eye and comb that gives promise of being nearly ideal. Walking over to the pen where his pride, the daddy of this youngster has had a comfortable home since hot weather set in, he notes with pride that the old boy has a son that he may well be proud of, a worthy son of a grand sire.

The pullets across the way now gain his attention, not all of them just what he would like but here comes one that gets his eye. Not a hen in the flock could have beaten her as a pullet, just a little finer here, a little better there, in truth a little wonder.

What satisfaction, what renewed ambitions, wonderful incentives to aim a little higher, to do a little better in the season to come.

Yes, he has attained "The Better Than the Blue."

THE POSSIBILITIES IN BREEDING POULTRY

P. H. Glatfelter, Spring Grove, Pa.

Never before in the history of Poultrydom has there been a brighter outlook for our poultry breeders. The great European War instead of injuring the poultry business has a tendency to help it. Thousands of foreign plants which helped to supply eggs to America and other trade centers have fallen into ruin as a result of the war. Europe, that only a year ago, was exporting hen fruit are today importing all they can get. In England the government has started poultry plants to ensure strictly fresh eggs to her many Military Hospitals. These plants are operated by wounded soldiers who cannot return to their regiments on account of the loss of an eye, hand, or on account of some other injury. Although compelled to use crippled labor she is deperate to get fresh eggs. Those of us familiar with poultry raising know only to well that the building up of a poultry plant cannot be accomplished in a year, and with such a great demand for eggs and stock, our American poultry raisers have a very bright future.

Much has been said in our monthly Poultry journals along the line of successful Poultry raising. Many of their readers heed the warning of their columns, others pay no attention to the contents. The latter are usually the "know it alls, or calamity howlers" of the poultry business. You have doubtless heard of many of the latter, and have listened to their doleful story of the utter impossibility of making Poultry pay, and then go on to name those who have made a failure of breeding poultry. Calamity Howlers are born daily but the men of today who cannot be talked to death and bluffed are the men who make a name for themselves and make the undertaking pay. You cannot name one occupation that does not have some failures. Take up any of our trade journals, no matter what trade or occupation you select, and you will find some concern going into the hands of a receiver, or failing outright. The Poultry business is not unlike any other occupation or trade, it has its failures, which are mostly due to mismanagement or ignorance of the laws of business. Another cause for failures is the utter lack of common sense, and failure to make use of the information found in our poultry magazines.

Poultry breeding, as well as all other trades is undergoing great changes. Efficiency is the "fore word" of the day. Our government is spending thousands of dollars in her Experiment stations. Most of our States have established similar stations publishing bulletins which contain information no real poultry fancier can be without. Here is where many of our poultrymen fall down. They fail to appreciate the fact that two heads are often better than one, and do not profit by the other man's experience.

The day has come that the public looks upon the Poultry Business as upon all other legitimate businesses. Our large daily papers are devoting whole sections to the trade, and instead of this line of business being called a "fad" it is fast becoming one of America's important industries, well named the Billion Dollar Industry.

Successful Poultry Breeding has been made possible and it is not a mere excuse in the line of business undertaking. Our many Egg-Laying Contests have proven the true value of "Thorough Bred Poultry." The secret to success in any undertaking is the proper start. The beginner in the poultry business must use good judgment from the beginning. He should first know how much he can put into his plant and stock; second, he should be satisfied as to the variety he wishes to breed; third, he should give the location of his plant the most careful consideration.

The beginner who enters the poultry business today has a future unlike any other ever presented, and by using the Poultry journals as an encyclopedia and using every ounce of gray matter, success is bound to come his way.

THE "REGAL" WHITE WYANDOTTES

At Hagerstown

John S. Martin has been making records with his Regal White Wyandottes for many years that have been sensational in fact, meeting the best of competition at leading and popular shows. His winnings for ten years at the Great New York State Fair is History. Now comes a new record of his just made at Hagerstown's Great Show. Read this record for it is enough to make a man believe his line is unbeatable: Cocks 1-2-3-4, Hens 1-3-4-5, Cockerels 1-2-4-5, Pullets 1-2-3-5, Old Pen 1-2, Young Pen 1-3. Mr. Martin also won the Champion Sweepstake Cup for Best Male at the Show. —H. P. S.

Editor's Desk

EVERYBODY READS EVERYBODY'S

Every reader of Everybodys should read Mr. Chas. D. Cleveland's article in this issue as well as his other articles on this same subject to follow in future issues. The Utility question, now, more than ever, prominently faces the poultry public, particularly the beginner, and we are most anxious for them to know just what "Utility" is, what it means and what it is worth, to one and to all.

* * *

Successful Poultry possibilities, to our mind, depend wholly on standard-bred varieties. Fowls bred along standard lines have known values of reproduction, which is the most essential quality in breeding, rapid growing and early maturing stock to make a given weight at a certain time, along with the quality to produce eggs consistently to a number, which places them as profit-paying stock under regular conditions. Later, after Mr. Cleveland has finished this series of articles, we expect to pass a few more remarks on this subject, and ask others to do so.

* * *

In this issue we are pleased to introduce to our readers Miss Minora Pomeroy, Scotch Plains, N. J., who in the future will have charge of "Everybodys Water-Fowl Department." Miss Pomeroy is a graduate of the New Jersey College, a breeder and exhibitor of note and comes to us highly recommended. We have every reason to believe that she will make this one of our most valuable departments.

* * *

Somebody, someplace, has resurrected the Score Card question, and the pros and cons are found to some extent at least in most every poultry paper obtainable. This makes good "Filler" for some, but we must admit that we are too busy to even read a part of that which is being published. It is too much like reading the news of ten or twenty years ago. Score cards, like everything else, may be all right in their place, or for those who want them, but for the average breeder, we can't see where they have a value of any kind. They are a monstrosity, and as we have before stated, it takes as good or a better posted man to understand and explain one, than it takes to make one.

* * *

We have scored a great many shows during our time, East West and South, and we have never felt the real satisfaction of work well done after any one of them as we do after comparison judging. A method that makes it impossible for the same judge or any two judges to score the same bird twice alike, one hour apart, has no ticket to our favor. We can have no confidence in such a system, we can recommend it to none.

* * *

Mr. U. R. Fishel's White Plymouth Rocks have made their Second grand record of the season at the Illinois State Fair by winning all the First Prizes offered but one. (Pullet). This with their sweep at the late Indiana State Fair in September assures us that the Fishel Quality is of the same superior merit that has placed this line a winner for years in nearly every section of this country.

* * *

The poultry departments at many of the fairs are missing the specialty breeders this year, and what were formally the leading Fall Fanciers Shows have dwindled to a mere trifle as far as the specialty breeders are concerned. Much of this loss of interest is directly due to the judging, which this year was in some cases the rankest we have ever seen for years. Fair Associations should realize this condition and secure competent judges for all shows.

THE OHIO STATE FAIR

A Great Fair in General, but not up to Expectations in the Poultry Department. A New Poultry Building Needed.—H. P. Schwab.

The display of Poultry at the Ohio State Fair was a disappointment in many ways and it was evident that the breeders are not giving their support to this show. Conditions no doubt, are the cause of this, and we do not blame the breeders in any way for the exhibition building in nothing more than an old "shack," with the porest kind of light and arrangement. The breeders who will show their fine and valued stock under the conditions the state offers them here, are brave men, indeed, who take long chances in doing so. In no way can we blame the poultry management, they have done their best and we were pleased to note the good showing made under the conditions but it is up to the members of the Board in charge to put up a large, light and airy Exhibition Building, so the breeders of this great state can show with credit to themselves their product in poultry, which surely has its share in the position and value Ohio holds among the States.

There were many fine classes of stock seen here, notably in White and Silver Wyandottes, White Rocks, Reds, Orpingtons, Leghorns, etc., and we can well imagine what this show would be under proper conditions. It should be of the class and size of the best held; it should equal Hagerstown, the New York State Fair, Brockton, Toronto and Allentown, and I have every reason to believe it could be made second to none when worthy of the support the breeders of Ohio and the Mid-West would give

THE GRAND PRIZE
AT THE NEW YORK STATE FAIR WAS AWARDED TO MARTIN'S REGAL WHITE WYANDOTTES

In the largest Poultry Show ever held in America, (9,300 specimens) the Regals won the Wm. H. Manning Cup for best ten birds, any variety. The complete winnings were: Cocks, 1-2-4; Hens, 1-2-3-4; Cockerels, 1-3-4; Pullets, 2-3; Pens (old) 1-2; Pens (young), 1-3. Gold special and National White Wyandotte Club Cup for best display. At this great National Show, the Regals have won Best Display for ten consecutive years and 52 Blue Ribbons out of a possible 60.

This record in addition to dozens of other records all over the country places the Regals in the lead. You cannot do better do better than to select this strain for your foundation.

3000 Cocks, Hens, Cockerels and Pullets for sale—3,000.

FREE—20-page catalogue and price list giving photographs of plant and winners.

Send one dime for copy of the Regal White Wyandotte book telling all about the Regal Strain.

Desk A HANOVER, PA.

it. The value of the poultry industry of Ohio should receive proper recognition from those in charge.

The display of White Wyandottes was one of feature class, the winners well chosen and of rare quality. As no catalogue of entries was had we failed to get the owners names of several birds in this and other classes. We would like to mention: In Whites, Mr. H. J. Riley, Bryan, O., won Cock 1; Hen 1-2-3; Cockerel 1-2; Pullet 1-2-3. First Pen Old and Young, good type and fine finish in all this line.

Silver Wyandottes an unusually fine lot, all well shown, Mr. D. L. Ziegler, Delaware, O., won Cock 1; Cockerel 2; Pullet 3; Old Pen 1; Young Pen 1.

White Rocks, a large class, with Mr. Geo. S. Moore the leading winner. Barred Rocks, but few shown.

R. I. Reds in both combs, are popular here, and fine, large classes were seen. Mr. A. A. Carver winning four of the five First Prizes in single combs, with his first young pen the feature of the class, they were a rich lot well mated. Mr. Carver also won well with his Sussex; this is his second good win of this season.

In Rose Comb Reds Mr. W. A. Dumond, Columbus, deserves special mention for his line; shape is seen here at its best along with style and fine, sound color. He won Cock 2; Hen 1; Cockerel 1-2; Pullet1. First cockerel has as good wings as we have seen; sound color and good head, etc. A nice line.

In Campines, Grusemer Bros., Creston, O., were strong winners in a good class, winning in Goldens: Cockerel 1-2; Pullet 1-2; Silver Cockerel 1; Pullet 1. They are also leading in Sussex and won here in Speckled Hen 2; Cockerel 2; Pullet 1-3; Reds, Cock 2; Cockerel 1-2; Pul. 2. In Light Sussex they won all four Firsts.

Orpingtons a very nice lot in all varieties. Shape seen to advantage here.

White Leghorns a large class. S. C. Browns good; some nice markings and good size noted.

Water Fowl were seen in great numbers and of fine quality in all varieties. The exhibit was complete and a worthy one, but not a marker to what this should and can be.

An Ideal Husband.

We are glad to learn from the Hog Wallow correspondent that Pope Eazly is making an ideal husband, contrary to the predictions made when he married last year. He has cleaned off a nice place on the bank of the creek for his wife to do family washings, and in order to be ever near her he has picked out a fishing place right across the stream. This is a sure sign of uplift and ought to go far toward conciliating the suffragettes.

Will You Do This?

When writing advertisers, mention "Everybodys." Thanks.

POINTERS ON MARKETING EGGS

MICHAEL K. BOYER, Hammonton, N. J.

Even though the egg crop is large, if that crop is not properly marketed there will be only ordinary profit. It is admitted that a good retail trade is the best market, but the farm is not always so situated that this can be obtained.

It is important, then, that a good wholesale custom be secured, and this makes it necessary that the goods be in such a condition that they will be sought after.

An ingenius method to advertise the eggs is to have a rubber stamp made with the wording of the farm on it, something like this:

Guaranteed Fresh,
Purebred Poultry Farm,
DaCosta, N. J.

This stamped on each egg would at once attract attention, and if those eggs are found to be true to representation, there would be no trouble to hold that customer.

The question arises: "When does an egg cease to be fresh?"

Investigation has proved that an egg remains in a fresh state for three days.

Some farms ship eggs when a day old, to allow two days' time for carriage and for the sale. This is a safe plan. As a rule, however, guaranteed fresh eggs are purchased the day they are placed on sale. Such eggs are for the "fancy, up-town grocery trade" of cities.

What is known as "Prime" Eggs in the city trade are eggs of which the age is not unknown—they being from one to three weeks of age in cool weather.

"Fresh case" eggs are a class of which it may be expected to secure six good ones, three fair ones, and three of a "demoralized" order, in each dozen.

It seems that the market is always ready for good, had and indifferent eggs. Of course, it goes without saying, that the stamped eggs are sold first, and at an advanced figure, as there is a special demand for them.

In nearly all the large cities there are grocers who cater to a fancy trade, and these are only too glad to arrange with some farm having a reputation for furnishing eggs that are strictly fresh.

Eggs should be gathered at least once a day, and even twice or three times easily is better. They should be placed in a cool, clean cellar, away from any impure odors, for an egg will quickly absorb any impurity that might be near it.

The question of feeding flavor into eggs, was practically settled some years ago by Professor F. E. Emery, of the North Carolina Experiment Station, who tried feeding onions to hens, with the result that the eggs of all those which ate the onions showed a more or less distinct flavor. Therefore, it appears that to get fine flavored eggs it is necessary to restrict runs enough so that no considerable

A Wonderful Record

Twenty-two First Prizes out of a possible twenty-five and all Specials and Best Display! And this in competition with many of the best birds in the country. That's our record at the Tri-State Fair, Trenton, N.J. —a fitting tribute to the knowledge, care and attention at Wilburtha. **Just as this paper goes to press, report comes from Hagerstown, Md., Wilburtha, S. C. White Leghorns captured all Firsts, Seconds, Best Display and Specials. R. I. Reds—1st and 5th Cock, 1st and 2nd Hen, 2nd and 3rd Cockerel, 2nd and 5th Pullet, 2nd Pen, Best Display. Every bird shown, placed in the ribbons. Other varieties not shown.** Meeting the requirements of poultry judges to this extent, confirms our belief that Wilburtha Birds are second to none. They're bred to lay, to pay and to win.

S. C. White Leghorns

Bred for exhibition and utility, they continue to maintain their acknowledged excellence in the face of all competition. Last call for show birds that will win for you in this season's shows. "They are always in the ribbons."

S. C. Buff Leghorns

The enviable record these birds have made in the Show Room leaves little doubt as to their quality. They are bred with the Wilburtha care and attention that means "nothing but the best."

Col. Wyandottes

Wilburtha's reputation as "Headquarters for Columbian Wyandottes" is just as deserved this year as ever before. A Wilburtha cockerel won the Spratt's Cup at Trenton for the best bird in the show, raised this year. This is the first time this prize has been won by a parti-colored bird. Come to headquarters if you want the best.

Col. Plym. Rocks

Birds that have won, are now winning and will win in future shows. Excellent stock for foundation. Prices reasonable. Reserve now.

S. C. R. I. Reds

Particular attention has been given to the development of this breed. Our award of Best Display at the Syracuse, N. Y. State Fair and among other winnings, 1st Cock, 1st Cockerel, 1st Pen, Best Male and Best Display at Trenton tells how well we have succeeded.

You are cordially invited to come to Wilburtha and see for yourself. A visit will well repay you. If you can't come, by all means write for handsome catalog, it's *free*.

Wilburtha Poultry Farms

Box E Trenton Junction, N.J.

amount of the food can be of such a character as to yield ill-flavored eggs.

* * *

Eggs should not be marketed that are not regularly found in the nest. Eggs from hidden nests, or picked up in the run, are risks, and should be used at home. Great care must be taken in this particular. All stains and dirt should be wiped with a moist cloth and then allowed to dry. A little vinegar will often remove the most obstinate stain.

* * *

Those who become discouraged by mistakes are not very progressive. Instead of being stumbling blocks, mistakes are object lessons that arouse one to a sense of closer observation and point out facts. However, the man who makes the same mistake twice is not a very observing person.

* * *

It is more important to know the work of the individual hen that the average of the flock.

* * *

There is no foundation for the assertion that the "sweet, rich flavor" of the egg belongs to the breed. That condition can only be brought about by the quality of the food.

* * *

There is a decided difference in the weight of eggs from pullets and hens, and of these laid by different breeds. These figures are approximately correct: Single Comb Brown Leghorn pullets, 17½ ounces per dozen; hens, 21½ ounces. Light Brahma pullets, 23½ ounces; hens, 23 ounces; Black Langshan pullets,, 24 ounces; hens, 26½ ounces. Pekin duck 35½ ounces.

* * *

The large breeds are best for caponizing. A few months old capon is no better than a cockerel. A capon will more readily put on fat and get large and prime after maturity. The object in caponizing is to secure quality and size, but quality is the most important. Age does not impair a capon as it does a cockerel, provided the bird is not kept longer than a year and a half. Capons will have to mature before they can get much finish, and for that reason they cannot be sold while young.

* * *

No poultry meat excels, if any equals, a half-grown Guinea, split down the back, broiled and buttered. It is meaty, tender and of splendid flavor.

* * *

Feeding skim milk has a tendency to whiten the flesh.

* * *

Remember "good condition" does not mean overfat.

* * *

It must not be forgotten that food flavors the flesh as well as the egg.

* * *

The yolk of an egg spoils much quicker than the white.

* * *

The first one of two litters of eggs laid by pullets are not so serviceable, so sure or profitable for hatching as is their later product, for the reason that they were first formed at a time when the pullet was growing and the organs not fully developed.

* * *

An authority says that if the egg is placed on the side or large end, the heavy yolk will settle to the bottom and come in contact with the shell which admits the air. If it is placed on the small end, it will always have a layer of white between it and the shell.

* * *

Colonel Roessel once said there may not be any very large fortune to be made in poultry raising, but there is a handsome living for any one who has the love for the pursuit, the ability to raise and care for the stock, and a small capital to start with. These three things must go hand in hand; separately they cannot bring success.

* * *

Bad cases of feather-eating have been cured by painting around the bare places on hens that have had their feathers plucked, with a preparation made of powdered aloes dissolved in alcohol. Hens do not like the bitter taste.

* * *

A French naturalist asserts that the use of pounded garlic with the usual food has been made to completely eradicate the gapes among pheasants in Europe.

* * *

A poultry keeper living some distance from the city says he found it difficult to secure animal food for his fowls, so he experimented with beans, peas, nuts, sunflower seed and peanuts with as good results as obtained from animal food.

* * *

The beginner finds many stumbling blocks in the artificial methods, but experience soon shows the trick of how to easily step over them.

* * *

Over-feeding of green cut bone is apt to cause leg troubles, diarrhoea, bowel complaints and worms.

* * *

Some years ago Professor James Dryden delivered an address before the Utah Farmers' Institute, from which this extract is worthy of reproduction: A short study of the composition of wheat and of eggs will explain why a profitable egg yield cannot be expected from wheat alone. Supposing you feed a hen which weighs 3.5 pounds, 3.25 ounces of wheat a day. Of course a hen of that weight would not long consume that weight of wheat alone. Supposing, further, that the hen uses 2.75 ounces of that for the maintainance of the body; that leaves half an ounce to be converted into eggs, assuming that all the food is digested, which of course is not the case. In half an ounce of wheat there is about .06 of an ounce of protein. So that, assuming that the hen consumes and digests 3.25 ounces of wheat per day, and that she uses 2.75 ounces of that for maintainance of the body, there is avail-

MAURICE F. DELANO, Proprietor——FRANK H. DAVEY, Supt.

able each day just one-fourth enough protein for an egg. In other words, it will take four days to get the necessary amount of protein for one egg. But the egg has other constituents; so has wheat. The half ounce of wheat contains about one and one-half times as much carbohydrates and fat as one egg contains. The hen fed on wheat alone has a surplus of one material and a deficiency of another. In other words, she has enough carbohydrates and fat to make an egg and a half a day, but has only protein enough to make one egg in six days. You place the hen in an awkward position by feeding her wheat alone. Wheat does not contain the egg making materials in proper proportion. Corn is even worse than wheat in this respect.

RAWNSLEY-SHIELDS POULTRY FARM

Specialists in Buff Orpingtons and Speckled Sussex. A Beautifully Located Farm Being Built for Stability. Manager Len Rawnsley Doing His Greatest Work.—H. P. Schwab.

A few miles north of Columbus, Ohio, on the suburban trolley line, and in a section noted for its fertile lands and fruits, we found the Rawnsley-Shields Poultry Farm with its surprising stock of birds beautifully located and well adapted to all wants and cares. Our interests here were directed to everything concerned, but mainly, of course, to the owners and the variety and quality of their birds. The visitor will not see style nor waste here in buildings, etc., the real plainness and simpleness with sound, practical worth is striking; it is a plant built for practical worth, for natural wants and the results are evident.

No doubt most of our readers know, or have at least heard of Mr. Len Rawnsley, who has in the past five or six years made a most phenomenal record as a breeder and winner of Orpingtons and Sussex, beside he has also won his way to the hearts of the American breeders and fanciers as a poultry judge as well, and there is a steady growing demand for his services. Mr. Rawnsley has been fully tested and has not been found wanting; his successful work in the past few years is evidence of his ability and we can look to the future in confidence, for we feel assured he is now doing his greatest work and that his greatest success is about to be recognized with his present line.

Mr. Shields, while we believe him to be a born breeder and fancier, received his introduction only last year by the winning of his birds at Hagerstown, Buffalo and Chicago; we wish that all could know him as we do; suffice to say his interest and confidence are centered in Mr. Rawnsley and their birds, and we are pleased to commend both to our readers.

Orpingtons and Sussex are the lifework of Mr. Rawnsley, and to see his stock here in both old and young, is to well realize that they are in the hands of a master. This line of Buff Orpingtons made their mark at the last Great Hagerstown Fair, where they won all six First Prizes. Cockerel also winning special for "Best Cockerel" at the show. At the Great Buffalo, N. Y. show in November they won Five First Prizes. Here again we saw and handled these noble winnrs and many of the young, it being pleasing to note that improvement can be expected. The young show undoubted quality in shape, being strong boned, heavy, deep and full. Heads and eyes average very high. While buff color in all its beauty and soundness is their feature, their entire line is a wonder collection of quality with breeding included.

While Speckled Sussex are comparatively a new bird in this country, they have already won a prominent position, have demonstrated their quality as a reliable and practical variety and are bound to become popular. Their make-up is attractive and they look to possess all the good qualities claimed for them. At the last Buffalo Show this line won nearly all honors competed for, and at Hagerstown, Chicago and Pittsburgh, also made records that will stand for time to come. Here in both old and young was seen a surprising quality line. We dare say the young show a fifty per cent. improvement; dozens of cockerels and pullets were handled and were admirable; still good as they are, there were some that stood out strong in all their splendor, real champions over all. One Cockerel in head, comb, shape and color is years ahead, even of what we hoped for; he is one of the best headed males we have ever seen; he sure is a bird of excellence and worth. The Pullets also are a charming lot, notably even in quality, form and color-markings, showing breeding worth back of all.

We were greatly pleased with all seen here, with the stock and with progress, as well as with the evident interest. There is a reason for quality stock and birds here, the reason of ability and knowledge; breeding backed in this way has its special values and is always safe and dependable. We hope to again visit here and to tell our readers more of this valued line.

SPAUGH'S BARRED ROCKS

Rugby, Ind.

One of the early breeders of Barred Plymouth Rocks in the Mid-West is Mr. C. E. Spaugh, Rugby, Ind. His name is familiar to all the old-time breeders as well as to those who have later become interested in this variety. Mr. Spaugh's splendid record made during the past several years is Plymouth Rock history in the Mid-West, whose echo has vibrated to every section of the country. Particularly is this true of his winnings made at the Club Show held at Indianapolis, Ind., February, 1914. There in a very large and strong class, competing with the breeders from the East and West, he was the leading winner with a line of great beauty and extra value.

That Mr. Spaugh is a close student and a successful breeder of Barred Rocks is most evident. We have often seen his line, also birds he sold, all of which show character in breeding, a sameness that reflects to breeding worth and value which is the best asset any breeder can hope for.

Mr. Spaugh is now offering stock at a special reduced price, in trios and mated pens, or in any quantity wanted. Those interested should write for his Summer Sales List. Mention Everybodys Every-Time.—H. P. S.

Riley's Barred Plymouth Rocks

I have some bargains in yearling Hens and Cocks, either mating, of my choicest breeders the past season.
Also some wonderful youngsters ready to win your early show.
HENRY D. RILEY Box C Strafford, Chester County, Pa.

DO YOU REALIZE--

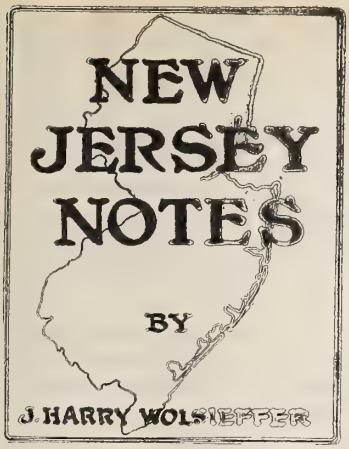
that every poultry ration must contain plenty of the egg-making, flesh-building animal protein. Without it your birds cannot make a big profit for you.
Successful poultrymen know from experience and Agricultural Experiment Stations have proved by careful tests, that protein from vegetable sources cannot be substituted for protein of animal origin. Your poultry must have meat food.

REICHARD'S HIGH-GRADE BEEF SCRAP

made from fresh, sweet meat, steam cooked, contains 55 to 60 per cent. of animal protein. It makes hens lay and young stock grow at an astonishing rate. No purer, cleaner, better Beef Scrap can be made. The highest quality at a price you can afford to pay.

WRITE US TODAY for free copy of our handy poultry book and daily egg record. We will also send sample and prices of the finest beef scrap you ever saw.

ROBERT A. REICHARD,
11 W. Lawrence St. : : : : ALLENTOWN, PA



Chicken pox like a bad penny is around again. It is not only found in New Jersey, but this year has been common in New York, Connecticut and Massachusetts. Clean quarters, plenty of room for the growing stock and well ventilated houses will do much toward warding off the disease.

* * *

Trenton Fair poultry exhibit under Mr. Harvey E. Rogers' management was better than ever. New Jersey breeders were well represented with good fowls, but to make the poultry exhibit on par with Syracuse, Allentown and Hagerstown, a new building should be erected. The Fair management should see that the poultry interests are better taken care of, by erecting a building that will be a credit to the industry in this state.

* * *

The Executive Committee of the New Jersey State Poultry Association held a meeting at New Brunswick, Saturday, October 9th, in which important business was transacted. The purchase of feeds was gone thoroughly into, and will be ready for action of the association at the annual meeting. The different committees have made good progress and by the time of the annual meeting, many things of benefit to the New Jersey Poultry Keepers will be started.

* * *

The Vineland International Egg Laying contest is assured. The local association is hard at work raising the necessary funds and the opening in October or November of 1916 will be celebrated in a fitting manner. The contest will be conducted by the New Jersey State Experiment Station, Prof. Harry R. Lewis in charge. The location is ideal and the fowls entered should make good records.

* * *

Poultry Associations should remember that at the annual meeting at New Brunswick, the 1916 show will be voted on. As Dover will hold the show this year, although their dates come in 1916, Jan. 10th-15th, North Jersey has been represented and the Association in the central and southern section of the state will be recognized. By voting for the official show in January gives the Association which is selected, ample time to select the best poultry judges and properly advertise the show.

* * *

Barred Plymouth Rocks taking the country through still remain the popular fowl, but in New Jersey, the little single comb white leghorn has been in popular favor for a number of years, not that other breeds are not good utility fowls, but the white egg market at New York with its attractive figure has thrown the balance in favor of the leghorn. Again the climate and soil conditions over a great part of New Jersey are ideal for this little egg-producer. If the leghorn cannot show a profit for its owner in the "skeeter state" it will not in any other state.

Sire of First Philadelphia Pullet, 1912. Owned and bred by C. N. Myers, Hanover, Pa. Unretouched photo.

* * *

There has not been a poultry exhibit this year that has not shown better quality than in 1914, showing a steady improvement in Standard-bred Poultry in this state, yet but few years ago but few poultry exhibits were held, the trend then being utility only. Today many progressive breeders are combining the two. They go hand in hand, and there should be no great dividing line between utility and standard-bred poultry. In New Jersey there are fifty poultry associations in the twenty-one counties of the state, and but few will be without a poultry exhibit.

THE RED SUSSEX FARMS

Marysville, Mich.

This farm, comprising 67 acres, devoted to Red and Speckled Sussex exclusively, bids fair to become a leading line of their popular varieties. The owner, H. H. Coburn, was one of the first to import and to breed the Sussex, and his winnings at M. S. Garden, New York, Chicago, etc., attest their value.

This enlarged plant has every convenience and is splendidly located with a suitable climate for poultry growing. The birds we have seen, show grand bone and size and the finest of color qualities.

We have personally known Mr. Coburn for upwards of 15 years as a breeder and judge and have every confidence in his character and ability.—H. P. S.

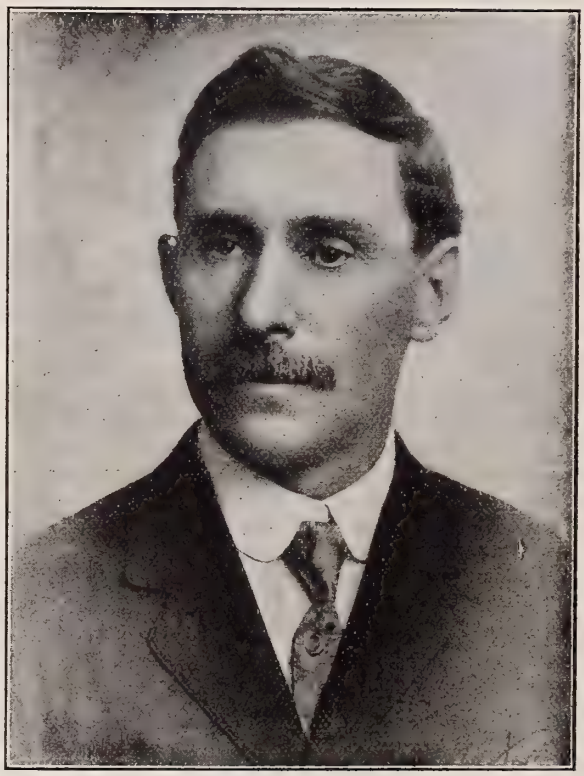
Preparing Poultry For Market

By EARLE W. GAGE.

TO the man who is engaged in the poultry venture on a large or small scale, the matter of proper preparation of stock for the market should engage his most careful consideration and deliberation. This has many times over proved its paying profits, inasmuch as all are obliged to "turn into meat" the worn out stock. Then, too, the demand for good poultry meat is steadily on the increase, and many are the poultrymen today who are engaging themselves in the business of incubating and brooding chicks for the broiler markets. Even when carried on in the spring of the year this proves most profitable, although the higher prices could be obtained in cases where the business is in force during the winter months, when the demands are greater than the production.

This is the day of long-distance shipments in poultry products. In the day of our grandmothers, the hired-man would take the old axe into the woodshed about sun-down on Saturday night, there to decapitate the rooster for the Sunday dinner. Then, in a latter day,—the day of our mothers,—the custom was to purchase the fowl of the meat-man on Saturday afternoon, being sure to get to the market early that a good choice might be had. But in our lay, what we have come to term the greatest day of them all, because of its modern conveniences and contrivances, people are going to the local markets, in the larger cities, and purchasing fowls that roamed the fields of the States three - quarters across the country from the market in which the purchase is made. In the days of yore chickens were killed to-day, eaten tomorrow, due to the fact that decay could not be stayed, was inevitable as the coming night. With the coming of the great city, with health ordinances, chicken farms were pushed out into the rural districts, near the edge of the city, and ice must be used where the fowls are dressed on the home farm, the shipment being for a distant market. The fowls are packed in barrels, layer after layer, ice between, with a large cake of ice on the top, that its cooling waters may serge down through the whole lot. This method has become quite unpopular with the newer introduction of shipping methods, for the great loss of soluble parts of the flesh demanded a far better method.

People are increasing in the city-population of the land far faster than the supply of fowl-products is increasing in the county. As the distances of the markets grew away from the growing-grounds, the old wagon saw its last day, and the modern traction cars and the railroads became the fashion of transportation. Every year finds the railroads carrying to eastern and western cities dressed poultry from a wider and wider radius. The products of the Texas and Oklahoma chicken and chicken poultry farms are sold on the New York, Chicago and San Francisco market places. And the fact of the matter is, these products, travelling long distances, reach the destination in far better condition than did the fowls, shipped one hundred miles packed in ice-barrels. In these days of food-shortages the poultryman who is able to devise the methods of shipment for a long distance of his product, is sure to become the monarch of the period in which he lives. In a day like this, when the people of all great cities are holding forth their hands, seking a fresh-killed fowl, fresh eggs, it is the honest duty of the feathered followers to make good for their own sake and the sake of the business in which they are engaged. Therefore, we are obliged to devise proper methods of transportation and prepartion for shipment whereby the products may reach a market 1,000 to 1,500 miles distant, arrival guaranteed satisfactory.



We do not have the opportunity every month to mention specially some of America's famous breeders, or to tell our readers of their successful work. When we do, we like to present them properly. Mr. U. R. Fishel and his line of White Plymouth Rocks are equally famous the world over. Their records are a live illustration of poultry possibilities and Mr. Fishel's life work stands out strong as a champion of Standard-bred poultry and its interests, and to him much of the general poultry success is due.—H. P. S.

The farmers of old, a generation ago, were the men who made use of the, today, ancient methods of preparation of poultry for market. They merely took an axe in hand, chopped off the wind-pipe, dipped the fowl in water, pulled the feathers, singed the fuzz, piled ten or twenty in a basket or box, and away went the products. These were the pioneers who constructed a roadway of disagreeableness, over which the modern man, who manages his establishment along scientific methods, must make his way, convincing the market buyers that he is not a long whiskered fool. These were the men who constructed the gateway of modern jokes about the keeping of poultry, so very antique were the methods pursued. But the buyers are coming to see the new light, and the day is not far distant when we shall all enjoy the golden results of properly preparing our product for the market. People really enjoy the product that has been prepared with care and precision, and, as has been clearly revealed many times, are happy enough to purchase such a product that they are willing to pay a bonus for it.

Poultry prepared along the line of the old-fashioned methods does not possess the keeping qualities which markets demand. The eating quality is lessened and lowered even before the hour of decay has been reached, due to the fact that the desirable "ripening" that does so very much to improve the flesh does not occur. The meat is stagnant, and the buyer is so thoroughly disgusted that he "does not come again." When properly prepared, poultry, like other products, will bring the buyers as sweetness draws the flies. And its grip will insure a steady market for all the products that may be produced.

The United States Department of Agriculture made an investigation along these lines, and have revealed to men many of the more advanced methods pursued by various poultrymen the land over. On one farm in the region just west of the Mississippi River was discovered a killing house which prepares fowls for the New York markets. In this house men kill the birds with an ordinary knife.

Then a portion of the brain tissue which controls the muscles holding the feathers in place is destroyed by a thrust of this killing knife, and the feathers are so loosened that they are easily pulled out. The cutting of the blood vessels in the proper manner permits the blood to drain out, boxes containing bran being under the bleeding fowl, this product fed to live laying stock. The fowl drains until blood-free. This is a fact much neglected by the average shipper, but is most essential, if the bird is to keep, and must never be overlooked where best results are desired. In order to accomplish this bleeding the vessels must not only be properly cut, but the fowl must be held head down while removing the feathers. Such a method prevents the feathers from becoming contaminated with blood, enabling the poultryman to handle the fowl very quietly, with less than two minutes consumed for killing and removing all feathers except the down and pin feathers, which are scorched by a special helper. But the better method is to have women at hand who will dip the fowl, still held head down, in boiling water, then pick off the fineness.

The old method of holding the fowl in the lap while picking is not to be recommended, as cleanliness cannot be exercised to the desired degree. The system of killing known universally as the Frame Method has resulted from a selection and combination of the best features of the String and Bench Systems. The String Method has gained greater popularity and use, of the two. The fowl is hung by twisting a strong cord about the feet, and is bled head down, and "brained" in the same position. The feathers are then pulled. A vessel fastened to the head of the fowl catches the blood.

Using the Bench System, the head of the fowl is held by means of a hook, the legs being held by the hand of the operator, who, after killing, removes the feathers. As can readily be apprehended, blood is sure to flow over the feathers and body, causing the method to be less popular with thoughtful poultrymen. With Frame work, the bird is retained in an upright position, which prevents its coming in contact with rough or soiled surfaces as with the String Method, and supports the fowl even more firmly than does the Bench Method, due to the fact that both head and feet are well supported. Greater number of fowls may be dressed using the String Method than with the use of the Bench Method. Cleanliness of handling is further emphasized by the system of pinning while the birds are yet hung on the shackels. The scheme permits of quick, satisfactory work, the results being all that could be desired, and is far superior to the old-fashioned method of holding the fowl in the lap while dressing, inasmuch as pinning with this method would mean that the skin of the bird is constantly coming in contact with foreign, dirty, bloody surfaces and that it is frequently supported by the neck, which prevents the draining out of the latter portions of blood. With the String Method in use it will be found that blood will continue to flow and drip until the last operation has been performed, while with other methods, necessarily, this blood is left to remain in the veins, which will go far toward failure in keeping qualities, as can be appreciated at once.

The modern poultrymen are men who bespeak of cleanliness, for it is the watchword of modern dressing of stock. Therefore, the heads must be free from blood and neatly wrapped in paper, while the feet must be carefully washed that they be not dirty when appearing on the market, which would depreciate the value of the sale. This operation should be performed just previous to sending the product to the chilling rooms.

Careful observation and investigation on the part of men who desired to know for themselves, has clearly revealed the fact that it is very poor policy to remove animal heat, either in poultry bodies or in milk products by the use of ice. The modern poultrymen of standing is making use of the refrigeration plant, providing clean, insulated rooms in which an even temperature of about 32 degrees is constantly maintained. In this room the fowls are hung by the feet, wire hooks in the shape of a letter S being used, on racks that are of the "A" shape style, with a number of cross-bars extending from the end and middle pieces, which go to form the "A" shape. The better method, for keeping stock for long-distance shipments is to make these racks of metal, which could be carefully and thoroughly cleansed. Using such a method, a large number of cooling-racks may be employed in a small room, insuring the owner of great results from a small investment. About the walls of the room run a number of pipes in which is carried brine which is cold and upon which the refrigeration solely depends. The greater part of this cooling is performed by the uppermost pipes—the upper four—as these contain the heaviest covering of frost which is due to the condensation of the moisture of the air.

The temperature of a live fowl is 103 degrees, therefore, for the desired results in cooling process work, the temperature must be reduced until the 32d degree has been reached. Here the temperature must be maintained for successful results. If the temperature be not maintained at the 32d degree, the fowls cannot be shipped with desired results for long distances from the killing-rooms. Many poultrymen are failures in long-distance shipping, as they are too anxious to ship the products previous to their having become thoroughly cooled. Careful investigations have revealed the fact that not less than 24 hours in needed to cool the carcass to the proper degree, insuring the lasting retention of keeping qualities for market purposes. The failure on the part of poultrymen to take note of this fact has done much to make shipment of dressed products for long distances a great failure, and has, to

ALDRICH WHITE ORPINGTONS

have wone more FIRST PRIZES during the last three years in CHICAGO and MADISON SQUARE GARDEN than all of our competitors combined, thus proving them the CHAMPIONS OF AMERICA.

GREAT ALLENTOWN WIN

At the Great Allentown Fair, September 21, 1915, we entered 12 birds only and EVERY BIRD WON at this, America's Greatest Fall Fair.

We won 1st, 2nd and 3rd Cockerels, 1st Cock, 1st Hen and 1st and 3rd Pullets. Every one of these birds were bred on our farm and we have hundreds more just as good and many better to offer our customers at reasonable prices.

At the National Laying Contest at Mountain Grove, Mo., an Aldrich Strain White Orpington Pullet is now at the top, having laid 200 eggs in the ten months ending September 1st. Let us furnish your winners and book your order before your competitor does, as we only sell to one customer in a class, at any show.

H. V. TORMOHLEN Box 1 PORTLAND, IND.

a great degree, caused universal dissatisfaction among careful and considerate buyers for the markets. This work of cooling is performed on a close range. If the glass should be allowed to go below the 30 degree mark, the fowl is sure to become frosted, while above 35 degrees would mean that decay will proceed so rapidly that long-distance shipments will not be permitted. It might be wise to freeze the product after having cooled 24 hours, but to freeze them before this time would be parallel to freezing stock in the house, then endeavoring to dress it for market use. If greater care and consideration is granted this portion of the preparation of poultry for the market there will be less failures on the part of the poultryman, with, on the other hand, greater pleasure among the market buyers in purchasing the products. To give entire satisfaction must be the aim and desire of all who would make a success with the poultry business.

One reason why so many poultrymen fail in their venture of killing and dressing for the markets along lines already mentioned, is that they fail to properly grade the products when placing them into hampers, or the conveyances used for the purpose. Imagine a man making a success of the egg end of the poultry business who failed to grade the size of the eggs placed into the containers? Could we expect to long hold we place small eggs beside large eggs? When the customer views such a crate, they can easily imagine the type of the man who packed it, for a man is known by the product he sends to the market. The size of the birds should, therefore, be graded with care for the best results and greater satisfaction of the customers, both wholesale and retail. Having removed the natural heat from the dressed body, the next step of the operation of the preparation would be to grade and pack in suitable containers or hampers for the shipment. The room in which this operation is worked should possess an even temperature of about 30 degrees, so that the packed containers may remain in this room for a number of days previous to shipment, if the market be flooded or the prices be unsatisfactory.

Thanks to common reasoning powers of the men who have constructed the great and mighty roadways leading to success in the matter of poultry products for the market, men no longer allow the packers to thrust old cocks, broiling chickens, and old fowls indiscriminately into a sugar barrel, pressing down the contents in the endeavor to pack tightly and thus bruising the flesh to the extent that the skin is torn. Such a procedure as this will prevent the keeping qualities of the produce, which would handicap the man in the business, situated far from the great market places in making a success of the venture in which he is interested. Therefore, this matter of packing in poorly contrived containers must be avoided and a package must be used that will allow the fowls to remain in best condition possible, with maximum keeping qualities. That this packing of fowls portion of the business may prove the best kind of a success, wooden boxes, in which a dozen fowls may be placed, are used. Great care must be exercised that each of the dozen fowls are of uniform size and weight, in age and quality, and the end of the boxes are labelled with the trade mark of the poultryman, which is the signal lamp to all who may investigate the contents that nothing but the highest reputation stands back of the products. The color of the fowls should be carefully looked into that the package may possess the highest possible atractiveness in appearance. Only those who have had years' of experience and days of study in the matter of preparing poultry for the market can be relied upon to well perform these tasks, as all men dealing in commercial poultry products will readily testify, as they, each day come to see the poorly prepared products, which might, with little care and study, be made of the highest standard of perfection. Best results are attained where each fowl is wrapped in oiled paper, placed in boxes lined with parchment paper, which insures protection of the skins and preventation of evaporation of the bodies, which cause the best product to become as dried as herring, and of no value to the market where quality is demanded.

The matter of supplying the demands of the great markets with the needs of broiler products is steadily on the increase. This increased demand has been the result only of the proper and best methods in the matter of preparation of the product for the market. Broilers should be packed breast up, with but one layer to the box. Too many poultrymen have become bewildered regarding the difference in methods pursued with broilers and roasters, which should be packed on the side, two layers to the box. This, therefore, is the cause of undue failure. The total weight of the box of broilers will average 25 pounds, while the roasters will run as high as 60 and even 75 pounds. The difference between this newer method of preparation of the products for the market, and the old-fashioned method of barrel packing, can be appreciated when it is understood that a barrel will hold from 250 to 300 pounds of products, allowing shucking of fowls, and having great pressure on the fowls from middle to bottom of barrel. Considering the delicacy of the skin of the chicken, flesh tender, the packages which are packed heavily necessarily arrive at destination in poor condition. Therefore, the advantage of the light hamper or container.

For the high grade customers, fowls of all grades should be packed in sealed packages, one to the pack-

age. This gives the desired individual effect, bespeaking of a reputation back of the product. The buyer is insured at first sight that the fowl has not been handled over by a number of other prospective customers, and that a line of wholesale dealers have not soaked the fowl in water to retain its freshness. The individual package tends to keep the fowl clean, with skin in sound condition. Kept in cold storage, from the season of flooded markets to markets demanding products, this manner of package will insure indefinite keeping qualities. The flesh will not dry out, and the package may be opened in just as good condition as when packed, if these packages are retained in storage plants of even temperature. Then these packages may be sent to the customer "hard frozen." The customer will soon become educated that this method of packing is by far superior to the older and more tried manners of sales, and will take to the trail as a dog after his game. Customers would rather purchase products held under proper storage methods, killed and dressed in the season in which the fowls possess the highest qualities, than, on the other hand, to purchase the same fowls a few months later, when they have lost their best qualities. People all along the line of the journey desire this product; the wholesale-man; the retail salesmen, and the customers all have their smiles for the individual poultry package, bearing the imprint of the modern poultryman.

The various methods by which the shipments are made in the more modern poultry-product establishments are most interesting and instructive. The greatest problem facing the pioneers of the venture was to perfect a method whereby the arrival of the products to their destination could be guaranteed the customerr. As fruit is shipped by fast freight and expres, in most modern refrigerator cars, so also, poultry products must be transported via such a route, for the fowls, as has already been shown, must be retained in uniform temperature. The success which has been attained within the past decade has been reached only after careful handling and refrigeration, from the start in the killing and dressing rooms till the fowls reached the markets. The refrigeration has been retained at even and constant temperature, because cold is a great discourager of those all-prevailing and ever awake forms of plant life, bacteria and molds, without which decay cannot take place. The learning of these few facts have gone farther toward success in the preparation of poultry for market than others, although properly dressed and cared-for products counts for much.

Although the load of products, carried in refrigerator cars, which are highly insulated against heat or extreme cold, retaining an even temperature which will not vary 5 degrees in transit, great care is demanded that the car be in proper condition previous to allowing the same to become of the products. These cars are sided lines through desert lands, and then, over the snow-capped mountains. The care demanded cannot be expressed. It must be instituted and executed. Fowls in transit seldom suffer from cold. Heat is the enemy of the products. Thsee cars are sided 24 hours before loading, that due attention may be paid as to their preparation. It is to the interest of the shipped that the cars be in proper condition, for the tags are all inspected, as is the car-condition, by inspectors in the interest of the United States Department of Agriculture, and a total loss of the products would mean failure to many men. One of these cars has a capacity for 20,000 pounds of poultry products, that is, a Western car lot, and the loading should not consume more than 30 minutes when properly attended to. Performing the work in a short period does not allow the temperature of the interior of the car to drop below the desired point, and ls a great factor toward success in shipments. If the poultryman has properly cared for his product, that is, chilling and pre-refrigeration, if the car is properly insulated and the boxes properly packed therein, and if ice and salt have been properly placed in the ice-boxes, enough for the trip, the load will be sure to arrive at the destination—four to six days later—in A1 condition, although the distance be 1,000 or more miles. If the least failure has been allowed to creep in, then, failure will mark the arrival of the car, and someone will lose a reputation that it would take many years of hard labor to build.

The proper preparation of poultry products for the market, therefore, attests itself as the one vital point of the whole catalogue of the poultry venture, and great are the responsibilities that attend the shipment of the poultry products for market, for the success of the poultry-man rests upon it.

If You Want the Dawn of the Show Season To Find You Equipped Satisfactorily, Buy

INGOBAR

BARRED PLYMOUTH ROCKS

You can easily spend a great deal more money to fill out your Show String than INGOBARS will cost you, but you cannot buy better bred, more vigorous or finer barred birds at any price.

The 1915 crop of INGOBARS tell their own story of quality; fine balance and general fitness to win in any competition.

An inspection of one or more birds, at your leisure, will convince you of their worth. An early booking is suggested.

Canandaigua—J. W. CHAPMAN—New York

grand size, strong bird. White Rocks have been in better quality and greater quantity than for three years.

The nations all are wrapped in night,
And dark and weary moments drag,
But through the blackness we behold
The stars are shining in the flag.

The world has lost two thousand years
And elemental passions vie,
But far above the battle smoke
The stars are shining in the sky.

* * *

It's in the air, everywhere. Business is brightening up and the good old days of poultry success are with us again. All cheer up and boost, our breeders have the quality and quantity as well.

* * *

We are agreed for "Votes for Women," but we cannot agree for or with women for poultry judges, if we are to consider some of their work lately seen.

* * *

And yet the woman who wears furs in hot weather would probably become indignant if a man questioned her ability to vote intelligently.

* * *

Everybodys is drawing close to the 50,000 monthly circulation mark. Will pass it before next issue. 7,140 new subscribers were received during September and October, with over 2,000 in for the first week, promises to set a new high mark.

* * *

Notice how the Red Speckled Sussex are showing? They are like "Real Money in Poultry."

* * *

"Joan of Arc was a spinster; was she not?"

"Yes; why?"

"O, I was just wondering how she got her armor buttoned up the back."

* * *

If the average man was a mule he would kick more men in one day than the mule kicks in a lifetime.

* * *

When in New York we were pleased to meet Wm. Stanley Hill, the new owner of the Monmouth Farms, Freneau, N. J., whose first exhibit at the New York State Fair was very successful. Monmouth stock was always good.

* * *

A hen which set at Cottage Grove, Ore., has completed its hatch 500 miles away. When Bert Nokes prepared to move to Spokane he decided to ship by express a hen that had been set about ten days together with the eggs. After biddy arrived in Spokane twelve of the fourteen eggs were hatched.

* * *

Have you utility poultry? We want someone to describe such to us?

* * *

"The value of a $10.00 Breeding Male" will be the subject for a series of articles to run in "Everybodys." All are invited to contribute. Do this for Standard-Bred poultry.

* * *

But isn't it chilly around sunrise?

* * *

Sunswick Buff Orpingtons made another clean-up record at Hagerstown. They have the best quality ever. This, with their New York State Fair records, are stunners.

* * *

Dreve in his old days has acquired a new habit of betting on ball games and lost at 100 to 1. Stop right now, Dreve, and stick to the chicken business; it is safe.

WHO IS THE "CRAB"

Boston, Mass., Oct. 4, 1915.

Editor Everybodys Poultry Magazine:

My attention has been called to an article in your publication on White Laced Red Cornish by one A. S. Wheeler, wherein he refers to the location of that class at the last Boston Show and attempts a sneering remark at the secretary. The matter would be passed by me unnoticed but that some one may be deceived by it.

The Cornish Class came in regular order and happened to land in a spot that this party did not fancy. Any one familiar with the cooping of shows knows that with the exception of the cock class in the first breed no one is able to guarantee where another class may come. It depends entirely on the number of entries in the several classes which vary from year to year.

Your correspondent entered one cock, one hen, two cockerels and two pullets at the last Boston Show. He came into the office in an arrogant manner, practically demanding that I guarantee some position at the next show or something would happen. I told him just what he says I told him: "I could make no promises of any sort."

That is precisely the way in which the Boston Show is conducted and will be conducted so long as the writer has the management of it. Every exhibitor at the Boston Show is on the same footing and no man, whether he enters six birds or 60 can bulldoze or by threat change that policy. Your readers can judge who is the "crab" in this case.

W. B. ATHERTON.

PRIZE CUPS OR EGGS

Which Are You After?

The letter below will suggest how your birds may be conditioned for the shows and a booklet we have will tell you how other breeders have increased egg production. E. S. Aldrich breeds White Orpingtons that can win at the big shows in New York, Chicago, Allentown and Cleveland. Read what he says about

French's Poultry Mustard

Columbus Ohio, Station B.
September 17, 1915.

Gentlemen:

FRENCH'S POULTRY MUSTARD has given us most satisfactory results and we advise its use at all times. There is no doubt but that it has benefited our entire line more than we can estimate. The health, vigor, bone and size of our White Orpingtons has been widely commended, all of which has placed them World's Champions at New York and other leading shows. We feel that FRENCH'S POULTRY MUSTARD is a necessity to Poultry Success.

Very truly and sincerely,
ALDRICH POULTRY FARMS.

Our 32-page booklet on "Mustard: Its Relation to Poultry and Increased Egg Production" will be sent free for your dealer's name. Ordinary commercial mustard will not give satisfaction. A mustard prepared especially for use with poultry must be used. FRENCH'S is the original Poultry Mustard in America. Don't accept substitutes or counterfeits. Dealers sell it in sealed packages only, for your protection. Send for Booklet.

THE R. T. FRENCH COMPANY

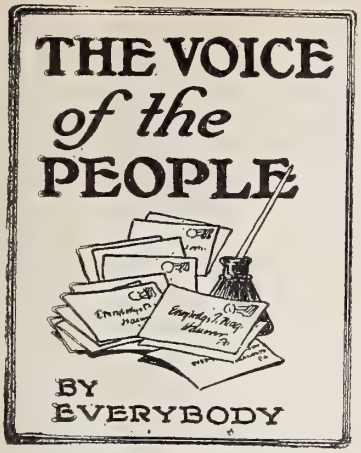
EXTRA CHOICE TWELVE TO 15 WEEKS OLD WHITE LEGHORN PULLETS IN ANY QUANITY AT $1 EACH

Charles D. Cleveland

Box 50 - Eatontown, - New Jersey



This department is for all matters of interest. Our readers are requested to send us such items of value and interest, also comments on questions of the day. All join in and make this a live proposition.

Nun Danket

THANKSGIVING DAY is at hand. The day set aside by our President for the giving of thanks, nationally, falls on the last Thursday of this month.

What is the significance, for us, of this national hoilday? Back in the times of the 1620's, the Puritan fathers, stalwart men that they were, also set aside a day for thanksgiving. Those God-fearing people in our estimation, had little to be thankful for, in comparison with the luxuries of the twentieth century, yet they saw fit to give thanks.

And back in the days of the 1890's in Kansas in its beginning days, the people set aside a day for thanksgiving at a time when the throes of a famine possessed them and when little, if any, money was in circulation.

And now it becomes our privilege to give thanks—we who are facing no rigors of a bleak New England winter of the early Puritan days—we who have no fears for the devastation which cyclones and the locust pest bring.

Perhaps the best way for us to pay our debt of thanks, is to keep that thankfulness spirit in our hearts, not only on the last Thursday in November, but throughout the whole year! Why not do as Charles Lamb suggests in his "Grace Before Meat", and give thanks not only for our daily bread at meal-time, but thank God for a wondrous sunset, for a particularly joyous day, for the solace we may give a friend in sore trouble?

And finally, let us rejoice heartily on Thanksgiving day! Let us sing with a vim that good old German hymn, "Nun Danket" at the Union Thanksgiving services, held perhaps in the oldest church in the town! And, best of all, let's keep the Thanksgiving spirt fresh in our hearts and lives, throughout the whole year!

Old Forge Poultry Farm, Box X, Spring Grove, Pa., closed the Fall Show season by making a wonderful win at York, Pa., Fair, winning every first and all but one second. This completes a record of 22 firsts, 14 seconds, 6 thirds, 7 fourths and 2 fifths, together with ten specials made at New York State Fair, Philadelphia, Pa.; Hanover, Pa.; Allentown, Pa.; and Lancaster, Pa., Fairs. Competition was keen, showing the growing interest in the grand Buff Orpington.

One of the most sensational winners at the New York State and Allentown Fairs was the Old Forge Blue ribbon winning hen. Grand in true Orpington type and of color which had the breeders speaking their admiration. This hen is the dame of some wonderful pullets, now ready for the show room.

This farm now offers for sale 500 cockerels, from $3.00 and up; 200 pullets $2.00 up. Just state the quantity you desire. They can furnish you. —J. T. H.

OF INTEREST TO PENNSYLVANIA FANCIERS

In mentioning those suggested for Executive Board members of the Penna. Poutry Breeders' Association, we mentioned in October number C. F. Bowers, of Erie, whereas it should have been that well-known Show Secretary of Erie, J. C. Bowers.

Election Commissioner R. O. Umholtz, has already mailed out the ballots for State Election, and we trust that every member will consider it their duty to vote, not only showing their interest in who will pilot the Association during the coming year, but by so doing bring renewed interest in Pennsylvania poultry affairs.

Peerless S. C. W. Leghorn Cockerels
Ready for the Shows
Exhibition Cockerels—$5.00 and up.
Utility Cockerels—$1.00, $2.00 and $3.00 each.
Cock Birds—$3.00, $5.00, $7.50 and $10.00 each.
RYAN BROS., Boxes 141-151, Hendricks, W. Va

Myers' Barred Plymouth Rocks

"Lady Beautiful" Strain, Pullet Line Exclusively

My winnings, year after year, at the leading shows of America, where the Barred Plymouth Rock Classes are the strongest, show conclusively the quality of my line.

Winners of Five Championship Female Specials at Madison Square, Garden, N. Y., 1914; Philadelphia, 1913 - 1914, Hagerstown, 1914; Williamsport, 1914.

This unapproachable record stands unequalled. It was made at my last five exhibits, competing against all birds in the American Classes.

AT THE GREAT HAGERSTOWN SHOW, 1915

My winnings there for three years are History. This year my birds won: Hen, 1, 2, 3; Pullets 1, 2; Pullet-Bred Males, 1, 2, 3 4, 5; Championship Special Female, Etc.

C. N. MYERS Box E. Hanover, Pa.

NEW YORK STATE FAIR

The Largest and Best Show Held in America—Quality in Every Class—A Representative Exhibit Beautifully Displayed Under Perfect Management.—H. P. Schwab

THE Great New York State Fair of 1915 has set a new high mark for poultry exhibits. With 9300 birds entered its only rival was the St Louis World's Fair of years ago, and even that was not as representative an exhibit as this was. There are but two real reasons for this record-breaking exhibit, viz.,—Superintendent Wm. H. Manning and the loyal breeders and exhibitors. Mr. Manning has the habit of making friends, his success is the assurance of confidence, a confidence never broken. Every praise is due him for without him such a show in size, quality and beauty is impossible. The exhibitors here represented breeders from many states and Canada. Their choicest was shown here, making superior quality in every class. We can highly commend them and hope to meet them there again.

Mr. Manning was ably assisted by W. H. Anderson, who with his assistants had planned well ahead for all conditions and despite the severe heat no loss was sustained. Mr. Manning's dinner to the judges was a most enjoyable affair and from first to last the show was all that could be desired. President E. B. Thompson, of the A. P. A, Mr. M. F. Delano, of Owen Farms, and other prominent breeders were present to view the great show. Mr. Delano had sold many birds for exhibition here. Their success made him happy.

First Young Penciled Silver Campine Cockerel, Chicago Coliseum, December, 1914. Bred and owned by Frank E. Haring, South Bend, Ind.

The Winners and Their Birds

Barred Rocks numbered 104, not as many as hoped for, but a good display. Mr. L. B. Ressequie, Millers, N. Y., winning Cockerel 1-3-5, Cock 4, Hen 4-5 Pen 4. Mr. R. W. Duryea, Hen 1, Pullet 1-5, Cockerel 2, Pen 1. G. D. Shafer won First Cock. The Hayner Poultry Yards First Old Pen.

In White Rocks 80 birds were seen with quality and condition, a feature. It was a beauty class of highest merit. Every winner a gem. The Rancocas Farms, Brown's Mills, N. J., won Cock 1-2-3, Hen 1-3-4, Cockerels 1-5, Pullet 1, Old Pen 1, Young Pen 1, other winners were, Elm Poultry Yards, Hartford, Conn., Hen 2, A. M. Lafayette, J. C. Richardson, T. L. Poole and Inglemire, P. F.

Buff Rocks numbered 148 with 16 exhibitors from six states and were out of the best classes ever seen at a fall show. First Cock, First and Second Hens and First, Second and Third Pullets were ideals in color and shape, all birds of grandest merit.. E. H. Lichtenwalter, Girard, Pa., won Cock 1-5, Hen 4, Pullet 2-3. Young Pen, 1. Vierheller Bros., Pittsburgh, Pa., won, Hen 1-2, Cockerel, 4. Old Pen 3, Young Pen 3. J. I. Cline, Pullet 1. Other winners, J. L. Ross. L. H. Perry, H. A. Eiler, Fred. Armer, Sunnyside Poultry Farm.

Silver Penciled Rocks, J. F. Mackay, Bordentown, N. J., won Cock 2, Hen 1, Cockerel 2, Pullet 1, Old Pen 1, Young Pen 2. In Partridge Rocks he won, Hen 5, Cockerel 2, Pullet 3, Old Pen 3, Young Pen 2-4. In these Mr. J F. Phillips won Hen 4, Pullet 1-2, Young Pen 1. The class of Partridge Rocks was an unusual fair one.

Columbian Rocks a rich class, Lew H. Brown, East Aurora, N. Y., Cock 2-4, Hen 1-4, Cockerel 4, Pullet 4, Pen 3, E. J. Barney, Syracuse, N. Y., Cock 1, Hen 2-3.

Silver Laced Wyandottes, a rare, fine class with R. F. Alden, C. B. Wright and R. C. Brown leading winners in a class of 92 birds. Golden Wyandottes numbered 104 birds, a great entry and a fine class.

White Wyandottes always strong here; was larger and stronger than usual—feature birds were the rule in every class with highest quality and superior conditions evident. This was Mr. John S. Martin's, Port Dover, Canada, tenth anniversary as an exhibitor at the New York State and he celebrated it as is his custom, by winning most of the prizes, viz., Cock 1-2-4, Hen 1-2-3-4, Cockerel 1-3-4, Pullet 2-3, Old Pen 1-2, Young Pen, 1-3. We do not remember all of Mr. Martin's sweeping records here, but we do know he has made them year by year with a large and rare quality line, perfectly shown the same as were his birds this year. We hope he will come for ten years more and always with the same improved "Regal" quality.

Mr. A. J. Gies, Delaware, N. Y., won Cock 5, Hen 5, Cockerel 2, Pullet 1, Young Pen 2.

Buff Wyandottes with 121 birds in line were another beauty class with many feature birds shown. Mr. T. S. Hewke, Middletown, won Cock 1, Cockerel 2-3, Pullet 1-4-5, Pen 2; Other winners were E. K. Fenno, T. A. Martin, L. W. Winner, C. G. Loucks, etc.

Partridge Wyandottes with 100 birds were one of the banner quality classes seen, rare in all departments, it was a real treat in every class. The Sheffield Farms, Glendale, Ohio, winning Cock 1-2-5, Hen 1-4-5, Cockerel 1-2-3, Pullet 1-2-3, Old Pen 2-3, Young Pen 1-2.

Judge Orr said this was one of the two best classes of Columbian Wyan-

dottes he has ever seen and the judge knows. There were 109 birds shown representing the best known lines with quality and competition of the best. The Sunnybrook Farm, Eatontown, N. J., won Cock 2-3, Cockerel 1-2, Pullet 1-2-3-5, Young Pen 1-2. Mr. A. G. Warner, Whitesboro, N. Y., won Cock 3-5, Hen 1, Old Pen 1, Young Pen 5. Other winners were, J. T. Lohnes, H. W. Polgrum, L. A. Ayes, G. E. Nichols and Pastime Farms.

S. C. Reds with 235 birds, were within one of being the largest class at the show. Here was superb quality, rich and sound in shape and condition most excellent. The Wilburtha Farms, Trenton Jct., N. J., winning Best Display with Cock 3-4, Hen 2, Cockerel 4, Pullet 4, Old Pen 3, Young Pen 2-4. The Orchard Farm, Norton Heights, Conn., won Hen 4, Pullet 3, Pen 4. In Rose Combs, Hen 1-2, Cockerel 4, Old Pen 2, Young Pen 2. Houck & Alt, Buffalo, won Cock 2, Cockerel 1, Pullet 5, Young Pen 1-3.

In Rose Combs, the Village Farm, Troy, N. Y., won Cock 1-2, Hen 2-5, Cockerel 1-2-5, Pullet 3, Old Pen 1-3-4, Young Pen 3. This line shows beauty, quality and fine type.

Light Brahmas with 90 birds shown were a stunning class that proved an attractive feature for quality was here at its best. Mr. Harvey C. Wood, Bound Brook, N. J., won Cock 1-2, Hen 1-3, Cockerel 1, Old Pen 1, Young Pen 1. Light Brahmas are better and more popular than ever.

Black Langshans, also a wonder class of 133 birds , with Mr. J. F. Robinson winning Cock 1, Hen 1, Cockerel 1, Pullet 1-3-4, Pullet 1. Mr. Alex. N. Warner, Old Pen 1, Young Pen 2.

S. C. White Leghorns, with 236 birds was the largest class seen. Here was also rare good quality with many feature birds. The Rancocas Farms, Brown's Mills, N. J., won cock 1-5, Cockerel 2-3, Pullet 4, Old Pen 3. The Monmouth Farms, Freneau, N. J., Old Pen 1, Young Pen 1, Pullet 3. The Elm Poultry Farm, Hartford, Conn., Cock 2, Hen 2, Pullet 1, Old Pen 2, Young Pen 2.

S. C. Buff Leghorns numbered 183, an exceptional class was shown. The Monmouth Farms winning Cock 2, Hen 3, Cockerel 1, Pullet 1-2, Old Pen 1, Young Pen 5. Other winners, L. E. Merihew, L. Wagner, Pastime Farm. R. C. Whites and S. C. Blacks won large, fine classes, as were also the Browns in both combs.

S. C. Buff Orpingtons have proven their popularity many times, but never more than here in this class of 175 birds. The Sunswick Farms, South Plainfield, N. J., made one of their best records here in this great class of superb quality by winning Cock 1-2-3. Hen 2-4, Cockerel 1-2-4, Pullet 1-2, Old Pen 1, Young Pen, 1. The Old Poultry Farm, Spring Grove, Pa., won Hen 1, Cock 4-5, Cockerel 3, Pullet 5, Old Pen 2, Young Pen 2-3.

White and Black Orpingtons, both fair classes, were shown. In Whites the classes were particularly good and large.

Dark Cornish numbered 71 birds all in good classes and conditions.

Red Sussex with feature displays by Mr. F. L. Platt, Swanton, Ohio, who won Cock 1, Hen 1-2-4, Cockerel 1-2-3, Pullet 1-2-3-4, Old Pen, 1, Speckled Sussex were also seen in good classes.

Hamburgs were large, strong classes, particularly the Silver Laced Polish in all varieties were seen. Houdans, good in numbers and in quality, as were also the White Faverolles.

Silver Campines numbered 177 birds and Golden 87, both were quality classes. Buttercups 158 birds.

Bantams in Game and Ornamental were large entries and of highest quality. Several feature classes here.

Ducks numbered over 900 birds, while Geese and Turkeys were also large classes. Pigeons and Pet stock completed the exhibit.

This display from first to last was complete, a beauty in every department and a credit to the fancy.

H. F. RIKHOFF'S SINGLE COMB BROWN LEGHORNS
Repeatedly show they are the leaders by winning in a class of 65 Browns at the Indiana State Fair, September, 1915—winning 1, 3, Cocks; 1, 3, Hens; 1, 3, Cockerels; First Pullet and First Pen. This again proves my birds are in a class by themselves; also remember my winnings at Madison Square Garden and the Coliseum Chicago Show for the past six years with a record of 7 Firsts at the Chicago Coliseum, December last. Do not hesitate. Get the best at headquarters. I can fit you out for any show, or with high class breeders. "Get on the Map" by getting a Rikhoff Pullet-bred Cockerel. Write today.
H. F. RIKHOFF ——528 Occidental Bld.—— INDIANAPOLIS, IND.

WE SEE by the papers that New York is in the throes of a woman's Suffrage campaign. We passed through that spasm some six years ago. We are now safely in line with the men when the polls are opened and every man views his better half with a queer fascination, a suspicion unknown before and husbandly interest is shown in the wife's ideas. If she happens to differ from him and puts one over in marking the ballot she soon learns that there is one secret it were better to keep for the sake of peace in the family. We have the pleasure in our state of having a jury with women on lately when a woman juror yelled loudly enough to be heard in the street, "To H—— with the judge, they make as many mistakes as the jurors." She became so hysterical that she frightened another little woman juror into a faint. We had a Mayor elected once in spite of the women supporters who insisted on the public platform in discussing their candidate's morals and the mistakes of his private life. We women have lots of fun learning the why's and the wherefore's of the ballot, but jury duty doesn't seem to be in our line. As one woman suffragette, the most important woman and one of the brightest said, when a woman refused to sit on a nasty case, "You are wrong, you owe it to this poor girl to sit on the jury and help send that man to the pen."

On a criminal case once not so very long ago, when the case was a mere matter or sending a man to the gallows or the Pen for life there were women jurors and the room in which they were all locked up was partitioned only by a curtain. One of the men jurors during the night got up on his cot and did a song and dance in his pajamas. It was discovered that the women were peeking through the curtain enjoying the entertainment.

On another occasion the jurymen were locked up in a museum, as that was the only room that could be used at that time where twelve men could be put to sleep. The poor Venus there in marble was draped every night with a pair of trousers. On the minds of some people a life hanging in the balance weighs lightly.

* * *

At the meeting of the Tacoma Poultry Association lately there was a lively discussion of the advantages of the egg-laying contests as now held in all parts of the country. They all agreed that the contests should be continued for a full year, taking the different breeds through the moult and having the pens numbered at least twenty-five to seventy-five birds per pen. That the contests became only a contest as to the ability of the different breeders to pick out the layers and the hen liable to lay. Also they said that to do any good to the poultrymen these contests must be held with houses that are what the poultrymen are in the habit of using, keeping down the overhead expense so that there is a net earning above the expense account.

It is now too late to enter birds at the Panama Exposition, but not too late to buy a ticket for the fair and be there when the big poultry breeders of the entire country will meet and enjoy the largest exposition held in the world. There will be an exposition of poultry that will cause a great gathering of new recruits for the building up of the poultry industry. That is one of the big results of the shows, big and little. It stimulates an interest in the industry that brings good results to every poultryman near.

The price of eggs on the coast is now 40 cents per dozen wholesale. Hens (heavy) live are bringing 14 cents, dressed 18 cents. Broilers are bringing 25 cents. You will notice the different price of light and heavy. Poultry always does bring a good price on the Coast.

The Tacoma show will come off December 28 to Jan. 1st, with Wm. Coats as the Judge and Wm. Shepherd, secretary. They always have a good show. This year there will be the best bunch of fowls ever entered as we expect to see there the prize winners of the big fair at San Francisco. They will come here to the Tacoma show and let us see what the blue ribbon birds of San Francisco look like, for of course we expect to win just about everything there. Don't laugh so loud that we hear it if we fall down.

* * *

The Seattle show will come off December 9th to 13th with J. A. Tucker as judge and Will Purdy another judge of note. They expect a big show also.

* * *

The State Fair at North Yakima was a big success with D. E. Hall as Judge, who gave good satisfaction. They had fine weather all during the

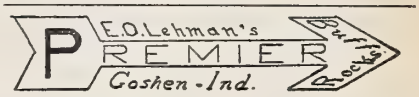
We noticed when down at the fair at Shelton, Washington, about a month ago that the poultry industry is beginning there with an impetus that will carry them forward to many poultry shows in the future. It is all new there, the really pioneer part of this State. It is the only part of the State of Washington that I have seen in ten years that has made me realize that I was living in a part of the great West where the unbroken forest is the hiding place of big game like deer, cougars and wildcats. There are no railroads at Shelton, and the boats go there daily from Tacoma. The hills on both sides of the Sound as you go there are near enough to watch both shores at once from the deck. The most beautiful farms are cradled among these hills and the little wharves that go out into the water are mostly home built affairs. At most of the landings on the beach there is a row boat in which people go out to meet the boats. They have their orchards, though the settlements are comparatively new. The climate seems to be just a little warmer there than along the shores of the sound, near Tacoma, and they are able to raise tomatoes there. They had some on exhibition there, large quantities of them, as large as any I ever saw in Illinois or Missouri. They have great prospects there when the railroads go in, which will be in a few years. Their poultry was of the best and every breeder there was bargaining for an American Standard of Perfection, which proves that there are great prospects there for the poultry industry. They are all in the lumber business there and find that raising poultry as a side line pays better than anything else.

At one of the best hotels in Shelton we noticed that a sign hanging in the hotel lobby and at the entrance to the dining-room reminded the "Loggers" that they must remove their "Pegged" shoes and get slippers from the porter in the billiard room before going upstairs. We soon saw the reason for it upon going upstairs, as the heavy stair covering was worn like a path where the loggers had gone up with corked shoes.

* * *

They tell a good joke on Judge Tucker, who is to judge the Seattle show also at San Francisco. When he was judging the Puyallup show two years ago a woman had a trio of ducks entered. Fred. Johnson, the worthy superintendent of that show, who always takes a deep interest in the exhibitors, especially when he is afraid they may not get the best of a deal, informed the woman that her drake had died and if she was to win a blue ribbon on drake she must have one there early the next morning. She went home wild with anxiety for she had no other drake. As she looked over the ducks in the pen at home she solved the problem.

"Well," she said, "These poultry judges never know a drake, anyhow," so the next morning she arrived with her duck with a couple of her tail feathers carefully curled with a curling iron and brought home a blue ribbon.



RED SUSSEX

Egg prices reduced this month. Sussex chickens have been hatched in the fall for years in England, to be ready for the fattening sheds the following spring. When given a place by themselves the birds grew rapidly. I usually have some of all values for sale at reasonable prices. Some utility yearlings at this time. Late chickens of this breed do unusually well. Booklet free.

F. L. PLATT SWANTON, OHIO

"HOMESTEAD" SILVER CAMPINES

The Vigorous Strain

Win at Boston 1915, thirteen regular prizes, including four firsts, specials for best display, best cock, hen, cockerel and best pen. Winnings at the New York State Fair, the first big show of the season, September 13-18, 1915; Second Cock, First and Fourth Hen, Third and Fifth Cockerels, Second and Third Pullets, First Old Pen, Second Young Pen, Second Display. Several specials with much comment on the quality, beauty and condition of our birds.

In addition to their blue ribbon reputation our VIGOROUS STRAIN has an established reputation for stamina, vigor, early maturity and heavy laying that makes them most desirable. We can furnish stock that should win at any show in the country.

Our aim is full value, quality and satisfaction.

HOMESTEAD CAMPINE FARM

Box H 2 Wayland, Mass.

WHITE WYANDOTTES

:: ARE ::

THE MOST POPULAR FOWL TODAY

The reason is that as a utility fowl they are unequalled, and as for fancy and beauty they please the most exacting. But there are various strains of white Wyandottes and as there is only one best you naturally want it.

Fishel's World's Best Strain

have in the past demonstrated, not only by our show record, but by the testimony of our customers, that they are entitled to the trade name on their merits. Send for our catalogue and winning list, giving you a report on the shows we have shown at this fall. This record convinces the world that our strain

HAS NO EQUAL

Remember they are bred for meat and egg production as well as fancy. Exhibition, breeding and utility birds for sale by the hundreds. Secure your foundation or new blood from the strain that meets all competition at the various large shows and wins the majority of prizes. To do this you must go to headquarters. Send for catalogue and November Bargains.

J. C. FISHEL & SON, BOX 50, HOPE, INDIANA.

Courtesy and Sportsmanship

J. Courtney Punderford

TOO often I am sorry to say, we find these two essentials sadly lacking in the hundreds of exhibitions held in the different states. Courtesy is due the exhibitor from the Secretary of the Show and from the officiating judges. I have judged at certain shows where an exhibitor not versed in the general trend of affairs perhaps exhibiting for the first time, would walk into the secretary's office and ask some "fool question" and the secretary would immediately go in the air and ask the exhibitor if he did not see that he was busy and had no time to answer questions. How simple it would have been to answer the fool question and have it over with. It would only take a second and the exhibitor would be satisfied and happy, but with the answer he receives he thinks the show management brusque and ungentlemanly and the show loses an exhibitor for the next season.

How different show secretaries and associations are: Certain associations make the exhibitor and judge feel at home at once by their hearty welcome and good cheer which pervades the hall when you enter; while others it is next to impossible to warm up to and one and all are glad when they can get away. A good warm grasp of the hand and "I am glad to see you back with us again," and "I suppose you have a great string with you this year, etc.,' which always helps. Rather in contrast is "How are you Punderford? See you later." It is the little things which count, and I assure you they are not forgotten by the fanciers. How often you hear one say of a certain secretary, "He's a mighty fine chap and the show would not be what it is without him." Then again, "He knows too much, the quicker they get a new secretary the better the association will be." I have two associations in mind. One has been made by their secretary, the other ruined. I have judged at both and know whereof I speak.

A judge should always be courteous to the exhibitor. This lack of courtesy is too often found in our younger judges. Whether they think that their work is beyond question, or their position is such that they cannot be approached, I do not know but nevertheless I have seen an exhibitor come to one of these judges and ask why their birds was left out of the ribbons, or why a certain hen did not go higher; the reply was, "I am judging this class and my awards stand." How easy it would be to say, "Why your hen just lacked a little in color, otherwise it would he higher up;" or even that old stereotyped judges' get-away, "She sure is a great hen but she was not quite ready, in another two weeks she will be just right, etc., etc." As I have said, even this will satisfy the man and make him feel better, but the gruff answer will always set him against the judges and he vows that he will not show under him again. After judging it is only courtesy to be ready to explain the whys and wherefors of your decisions; there is always a better feeling afterwards and they go away saying, "Well, that judge does know his business and I guess I was wrong." A judge is at a mighty big disadvantage whichever way you look at it and the more friends he has, the better going he will find.

It is always a pleasure to walk in a show room and have Tom, Dick and Harry come up to you and say they are glad to see you again, that there is a hot class awaiting you, and so on. The courteous and efficient judge is always sure of this greeting.

A good loser is a good fellow and a true fancier. Just for instance, let us assume that a large farm will enter a big string in one of our leading shows and after the judging is over and the ribbons up, the owner and manager of this farm will line up befor their second prize pen (three blues having been taken in this class by them) and the owner will say "Well, all I can say is that Judge —— is blind; if ever a pen deserves first ours does.' Then the manager will add, "Yes, all he thinks of is color, a regular crank, type never counts with him." And so it goes on, ripping the poor judge up the back and telling everybody that he will never get a chance to pass on their birds again. How often you hear in the show room the remark what do you think of the judging of the White Leghorns, the answer will be, "I only wish Judge —— had been on the class, for then we would have got all that was coming to us.

Fellow fanciers, this is all wrong. If you do not get what you really think you deserve, swallow your medicine and take it with good grace, for nine times out of ten the judge knows better than you and also remember that you have not had a chance to handle each and every specimen as he has. Naturally, we are all a bit prejudiced and think ours the best; some exhibitors cannot see any other birds but their own and announce before the class is judged that they will take 1, 2 and 3 in cockerels and when they only receive 4 or 5, the hall will not hold them.

When you come to think of it, does it help to talk about a judge and call him all kinds of names, simply because you did not get all the blues? Are you thought any more of and do your fellow fanciers hold you in any higher esteem? They may not say anything when you are saying these things, but they are doing a deal of thinking and putting you down as a chronic kicker and fault-finder. Be a sport, as the saying goes, win gracefully and lose gracefully. You will be thought more of and everybody will leave with a better taste in his mouth. You have no idea how one man can rile things up by his unjust remarks and continued fault-finding We are all more or less fault-finders, and so why not say when the show season opens this year, each and every one of us will make it a point never to criticise the judge, secretary or exhibitor. The atmosphere will be clearer and I am sure we will all feel better for it.

Eighth Prize—$10.00 Pair of Fowls, Incubator or Brooder, Your Choice.

Ninth Prize—$10.00 Pair of Fowls, Incubator or Brooder, Your Choice.

Tenth Prize—$10.00 Pair of Fowls, Incubator or Brooder, Your Choice.

In making your selection of Fowls, Incubators or Brooders, they must be selected from advertisers in Everybodys

We will furnish you with subscription sheets, also with sample copies for use. Remember our regular subscription price is 50 cents the year, but to subscription agents in this contest, it is but 25 cents, so you are at liberty to take subscriptions at the price you think best, some agents give all their commission to the subscriber and in this way probably get more subscriptions. We leave this for you to arrange according to your condition.

SPECIAL INSTRUCTIONS TO AGENTS

1st. Renewals count the same as new subscriptions. 2nd. Cash must accompany all subscriptions this will avoid misunderstanding. 3rd. Keep a duplicate list of all subscribers sent us, in case any question arises when the contest closes. 4th In case of a tie the value of the prize will be divided. 5th This subscription contest closes December 10, 1915. All letters postmarked that day will be counted, thus giving those at a distance an equal chance with those near. 6. A list of all winners will be given n the January, 1916, issue. 7. All agents may work where they please; this is fair to all. Send for more supplies at any time. 8. No subscriptions can be sold for less than 25 cents. You must send at least six subscriptions to entitle you to agent's commission on prizes. 9 All subscriptions must be taken on the merits of the publication. 11. Notice—Take three years subscription to "Everybodys" for $1.00 to any one party. Send 75 cents and keep 25 cents as your commission; this will count as four subscriptions on the contest.

TODAY IS THE TIME TO START

"Get Busy." Start today and be one of the first. There is advantage in this. Subscriptions for "Everybodys" are easy to get.

DO NOT NOW DELAY TO ENTER THIS CONTEST

Remember, you are to send us only 25 cents for each subscription. You keep the balance for your commission. This opportunity is yours to accept. You receive your choice of the Poultry Books offered for the first six subscriptions you send us. Send for sample copis and subscription blanks today, they will be supplied at once, free of charge. Start today as you will be getting in on the ground floor.

EVERYBODYS POULTRY MAGAZINE PUBLISHING COMPANY

HANOVER, PA.

THE ALLENTOWN, PA., FAIR

A Large Display of Choice Poultry, Eggs, Etc.—Reds, Leghorns, Wyandottes and Rocks, the Best Classes—Unsatisfactory Judging.—H. P. Schwab.

FOR many years the poultrymen have looked upon the Allentown Fair with favor and have made it one of the three or four leading fall shows. They offer good money, have fair buildings and a superintendent who knows poultry and the breeders' requirements, still for the last year or two many of the old-time exhibitors have been missing there and we can only account for this in one way, viz.,—judging.

While some of the best judges are employed, and I fully believe they intend to procure all good ones, it is a fact, nevertheless, that this year some of the rankest kind of work was pulled off and the breeders in general disgusted with the judging of several classes, particularly in water-fowls, where J. H. Wendler placed the awards. From personal observation and from the reports of Judges, Breeders and Exhibitors alike, his work was very unsatisfactory and unjust. It is common opinion that he is not capable and the air was full of rumors to other effects.

I believe the management is innocent for his engagement and we only mention the above so they and others may be very careful in the future.

In Barred Rocks, Mr. C. Guy Myers, Siddonsburg, Pa., won, Cock 1-2, Hens 1-2-5, Cockerel 1-5, Pullet 2, Pen 1-3.

White Rocks, one of the best classes for years, Mr. Guy Daily, Jeffersonville, Ind., showing but five hens, won 1-3-5. -The Fairfield Poultry Farms, Fairton, N. J., won cockerel 1-3, pullets 1-3.

In Silver Laced Wyandottes, which also was one of the largest and best classes in the show, Dr. T. H. Charmbury, Hanover, Pa., won Cock 1-4, Hen 2, Cockerel 1-2-4, Pullet 5. First Pen by J. F. VanAlstyne, was one of rare beauty.

In White Wyandottes, Mr. A. J. Fell, West Point, Pa., won his usual honors as follows: Cock 1-2, Hen 1-2-3-4, Cockerel 1-2, Pullet 1-2-3-4, Pen 1.

The Sheffield Farms, Glendale, O., won in Partridge, Wyandottes, Cock 1-2-3-4, Hen 3-5, Cockerel 1-3-4, Pullet 1-2-3, Pen 1-2.

S. C. Reds, a beauty class, in which Mr. F. H. Stillwagen, Allentown, Pa. won, Cock 1, Hen 4, Pullet 5. In Rose Combs, Cock 2, Hen 4, Pullet 1-2-3. In Single Combs Mr. E. K. Eichelberger, Hanover, Pa., won Cockerel 1-5. He has won first cockerel here for years.

In S. C. White Leghorns, the Elm Poultry Yards, Hartford, Conn., won Cock 5, Hen 1-4, Cockerel 4-5, Pullet 1-4, Pen 1. Mr. H. C. Mack won Cockerel 1-2, Pullet 2-3, Pen 2. Endicotte Farm, Cock 4, Hen 2-3, Pen 3.

In Black Minorcas the Pratt Experiment Farm won Cock 1, Hen 1-2, Cockerel 2-5, Pullet 1-4, Pen 1. All prizes in Rose Combs.

In Buff Orpingtons the Old Forge Poultry Farm, Spring Grove, Pa., won Cock 1-4, Hen 1-2, Cockerel 3-4, Pullet 1, Pen 1-2. R. S. Roberts won First Cockerel.

Good classes were the rule in most varieties. The display of eggs was one of the best ever seen. Allentown has its opportunity and in the future should be as great as in the past. It can be made better than ever with quality Judges, and no one knows them any better than does Supt. Wittman.

Geo. L. Young

THE Fanciers of Bantams should be delighted with the way these little birds have forced themselves to the front. Hanover, Allentown and Syracuse, three great Bantam Shows and two of them on the same week. The Bantams at each place were the attraction of the show.

* * *

The Black Cochin Bantam have come into their own and they surely have been brought up to a point near the mark. The Buffs have gone back and we do not see as many shown or not near the quality of a few years back. Boys, get busy, a grand little bird and always a market for them.

* * *

The war on the other side of the Pond is putting the Bantam business in the background over there. The Belgium Quail and Mille Fluer will be few and far between. Some opportunity for the American breeder. A word to the wise is sufficient.

* * *

Next stop Buffalo.

Don't forget the Annual Exhibition of Bantams of the National Bantam Association. A liberal list of Cash Specials, cups and ribbons. Three judges will pass on the Classes. The Secretary would urge you to send along your birds and help him make this the Banner Exhibition of the Association to date.

* * *

Every breeder of Bantams should do his best to put his birds in the very best condition that is possible when showing them, and there are many ways to improve them that can be employed that cannot be called faking, but when it comes to pulling out and breaking down Cochin Bantam's tails, it is going too far. Many good specimens that would stand a good chance of being placed near the front has to be left out because of the condition of their tails. The Judge that is doing his best to be honest in his judgement is often harshly criticised when he leaves a good bird out due to this condition. Improve your bird in every way you can, so as to show them in the best of form, but stop at that, don't knock the Judge when you know he is right and if it was the other fellow's bird you would say he did right. Let us all be fanciers in the truest sense of the word.

* * *

No better way of teaching your boy or girl to watch the little things in life that really count for much than by starting them breeding Bantams. The boy that can be made to become interested along this line will be taught a lesson that in after life will be of value to him. Watchfulness, care, prompt attention to duty and patience all which go toward making a clean, kind man. Try it.

* * *

The Bantam man often overlooks the fact that the Poultry Papers are helping him make his hobby a paying one and he withholds his support, when he should do his best to help the men that are making the Poultry business what it is today. You Fanciers that have had a successful and pleasant experience help the novice by writing of ways that you have found helpful to you and send it to the papers that are running a Bantam Department. Give the beginner a chance.

Breezes from the Mid-West

by Theo Lewes

I WONDER how many readers of this Magazine ever get mixed up with a lot of Specialty Clubs Secretaries and tried to inject new life and energy into them for a successful Club Meeting. Believe me, it is some job. It would seem to me that when the Specialty Breeders get a spite at some fellow, they wish the Secretary's office on him without any funds to conduct the business, then, he in turn, returns the compliment by wishing it on someone else, and, the poultry show secretary that gets tangled up with them has his fun in trying to straighten them out.

I wonder sometimes whether Specialty Clubs do any good at all or not. A good live wire like Harvey Wood of the Light Brahma Club does encourage some outsiders to take up the breed he is interested in, but the average secretary does not have the time or faculty of writing a mesmeric letter that brings home the bacon. So far as I know none of the Specialty Clubs have sufficient funds to make a successful showing, and their only hope of revenue is through the payment of dues and donations by their individual members. If you can find enough good fellows to keep coming through, it will work out all right, but. what do they get for their money. They put up cash specials and pay their entry fees and take a chance on winning some of their money back. If they win it, they have gotten back what they spent; if they don't win it, they are out that much; so, taking it from every standpoint, we question it very much whether the Specialty Clubs help the individual members or not.

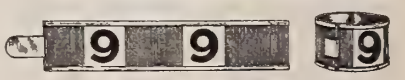
We believe that the individual breeder that is interested in the variety, would be dollars ahead in the end, if his energy were extended in his own behalf, and the money spent in maintaining the Club was used to advertise his own individual birds.

While on the question of Specialty Clubs, let me suggest something to all of you that costs you nothing and will materially help to increase the entries at the Shows where your meetings are held. The system in this; decide before your catalogue is issued, where you are going to hold your meeting the next year and devote a page in your catalogue to the Annual Club Meet and the names of the Judge or Judges that will award the prizes. I think I can speak for the Secretaries of all of the National Shows, we will be glad to pay for a page Ad in any Club catalogue that is issued prior to October 1st, that will state the meeting will be held in the Shows that we are interested in. This would be money well spent as it would save hundreds of letters to individuals, and would advise the members long before show time, where the Club would meet and what specials would be offered at that meet.

Think this over Mr. Secretry, and at your Annual meeting this winter, decide where you are going to meet next winter. You will save a lot of correspondence for your Secretary, will do your members a lot of good and you will be extending a courtsey to the Secretary of the Show where you will hold your meeting.

* * *

The score card versus comparison is having its annual airing, and we were really surprised to note the number of breeders that are anxious to go back to the old score card system. This may not be true throughout the Eastern States, but is is undoubtedly true throughout the Middle and Western States. Exhibitors feel that they get more information under this system than under comparison, and they claim they are better prepared to make sales and can give better general satisfaction to their customers. With this view of the case, it is clearly evident that score card judging throughout the Middle and Western States, is going to be more in demand in the next few years. than it has been in the past, and Judges who are expecting to be employed at good wages in the local shows in this district, might just as well make up their minds to score the shows and be able to say why they make certain cuts in certain sections. The National Shows of course, will never come back to score cards. The exhibitions are too large, the time is too short and the chances for errors too great, but as a rule the birds that make up the National Shows, have gone



Colored Leg Bands.
Big Black Figures on White Background.

A. P. Spiller : Dept. E. : Beverly, Mass.

PITTSBURGH POULTRY EXHIBITION

JANUARY 17th to 22nd, 1916

THE BEST BIRD WILL WIN

The Poultry Exhibition of Pittsburgh Incorporated

E. F. BALDWIN, Secretary **Crafton Station** **Pittsburgh, Penna.**

through the local exhibitions prior to their entry in the National exhibition, and there it is a battle of supremacy among the best.

It is useless to say that one system is superior to the other so far as awarding prizes is concerned. If the standard is carefully followed, the same bird will win under either system; if it is a question of ability on the part of the judge, he may get by in a comparison show, but he wont get by in a score card show.

* * *

I remember a remark made by the head of one of our large wholesale houses in Indianapolis, about one year ago, in regard to business conditions. He said, "Undoubtedly things are looking up, and my reason for making this statement is, that we are flat on our backs and can't look in any other direction.

This country has passed through a crisis that but a few men in business really appreciate. Why we did not go bankrupt as a Nation, some of the best informed financiers of this country are yet at a loss to undestand; but, we got by and we kept not only our National credit but our local credit, and while we may have cussed every banker black in the face when he wouldn't loan us money when we thought we ought to have it, it is a notorious fact that we have got to hand it to these fellows for they kept us out of trouble.

But conditions are better. This fact is clearly demonstrated every day to those who are on the road and are mingling with business men in all its varied branches. Every month sees it a little better than it was the month before, and every month is going to see it improve so long as this nation keeps its fingers out of the trouble that is bankrupting Europe: and, we really believe that the crisis through which we have passed will prove in the end to be a stepping-stone for one of the greatest foundations of economy that was ever constructed in your life or mine. We have learned how to make $1.00 go as far as $4.00 or $5.00 used to go, and now, that we have learned this system, it is going to take quite a little while to get us as a nation to go back to reckless expenditures.

Young men and young women, who have lived for the past year on from $6.00 to $12.00 per week, and paid their bills, will, when salaries are increased, begin to horde up that extra money and in time become property owners and home builders.

Perhaps no one business has been more affected by the hard times the past twelve months, than the poultry business, and it is certainly gratifying to know that a certain number of the old pillars in the business have staid through it all and have carried well displayed Ads before the public and never allowed their interest to lag. These men have built a monument to the poultry business and now, that the trade is coming back to them, it is only their just dues and we are glad to see it. We hope that everyone of them who has helped to hold the business together for the past twelve months, will, in the next year, make more money than they ever made in their life out of the poultry business.

* * *

Within the past three months I have visited several exhibitions and have been on the farms of a number of breeders, and at no time in the past five years has there been as many high-class specimens shown at the early Fall shows, nor as much quality found in the yards of the breeders. The coming show season is going to be an eye opener for quality in nearly every breed and variety. We expect not only the greatest shows, but the best quality shows that has ever been held in this country, and if the attendance at the State Fairs is any criterion to go by, then we may expect the best paid admission that we have had in the past three years, for in nearly every instance, when weather would permit, the crowds have poured into the grounds and these crowds were made up of all classes of people, and the buying public have not been slow to take advantage of good offers and many valuable specimens have changed hands at remarkably high prices.

* * *

The crop conditions in the Middle West are more or less speculative. This has been one of those peculiar seasons when nature has produced lavishly and destroyed just as lavishly. Wheat, oats, corn and hay has yielded more per acre than at any time in the past ten years, but the weather conditions have been so unfavorable, that it was impossible to harvest all of it, in fact it was next to impossible to harvest any of it in as good condition as we do ordinarily.

At this writing, October 1st., there is still some wheat in the shock, and it is practically ruined, so far as the grain is concerned. The corn crop is immence and will yield perhaps more than at any time in the past ten years, provided we can get weather suitable for ripening it; but, it has rained constantly and is still rain-

DO not let our unparalleled win at MADISON SQUARE GARDEN, New York, FOR THE PAST EIGHT YEARS cause you to think our prices are beyond your reach. A Dollar with us has as much purchasing power as a Dollar spent anywhere in the WORLD. We can furnish winners to meet any competition. We have raised more good birds than ever before.

They are ready for the Shows now; also at this time, we are offering yearling Cocks and Hens at prices that defy competition, quality considered, namely: $5.00 and $10.00 each.

Bear in mind, we ship on money back guarantee. Write us today your needs. Handsome illustrated catalogue free.

FOXHURST FARM

Lime Rock, Conn., U. S. A.

ing, and much of the corn is green. We have had no frost as yet and a little frost would do no harm, but heavy freezing would injure much of the late crop; but, take it all in all, we have no real cause for complaint.

In the state of Indiana, I venture to assert that five million bushels of apples will go to waste; the trees in this state, in fact in all the Mid West States are simply breaking down with fruit. There never was such an apple crop in the country, but the price is low and but few of the farmers are prepared to hold this stuff in cold storage, and the packers are not able to handle one-tenth of all the fruit that is offered. In driving through the country in the past few weeks, I note many of the farmers have turned their hogs into the orchard, in that way using up some of the crop that is going to waste.

* * *

At this writing, many of the people are stirred up over the big European war loan. This loan seems to be in favor in this city, not only with the banks but the small depositors, who are able to buy from one to five thousand shares of this stock. It seems that this loan works two ways to the advantage of the United States; first, in buying back many of our American securities and being able to sell for cash the American products. How great the risk may be in loaning to nations that must eventually make a settlement one way or the other, is a question for the purchaser of the stock to decide, but, it is not often that good securities will pay from 6 1-2 per cent to 7 per cent on long time loans. Whether or not, we have a right to sell munitions of war, is a question that I know Everybodys Magazine does not care to discuss. The only matter that would interest the readers of this magazine is, would you have money to loan at 6 1-2 per cent and 7 1-2 per cent, on what seems to be gilt edge securities.

No doubt many people in the rural districts do not understand that they have the same opportunity of making this loan as the bankers or the business men in any city. The final arrangements that are being made will place this stock in the National Banks where it can be purchased by you, and where the bankers will be glad to explain all the details. If you have no National Bank in your town, the local banker can put you in touch with the proper parties to deal with.

Cleveland, Ohio, is asking for the 1916 meeting of the American Poultry Association, and we can think of no city better located for this convention.

The Cleveland Chamber of Commerce is working with the members of the Cleveland Poultry Breeders Association to bring this meeting to the Buckeye State, and we can depend upon as much publicity as we have ever had in any other city. So let us all get behind the movement and make it unanimous for Cleveland the second week in August, 1915.

EXPERIENCE OF TELEGRAPH OPERATOR WITH CHICKENS.

(By J. S. Wilson, England)

IN the year of 1912, while I was working as agent and operator at Kildare, Texas, which is located on the Texas & Pacific Railway, I was taken with a bad case of chicken fever. I had read so much of chickens being raised by artificial incubation, it looked good to me, and, believing I could do anything that anyone else could do, I at once bought me a high-priced incubator.

Well, I put the machine to working and expected nothing short of a nice bunch of chicks in due time. At the end of twenty-one days I failed to get a chick from the 150 eggs I had placed in the incubator. Well, I was very much disappointed and my neighbors all had something to say about me fooling with an incubator and they were all pleased to know that I had made a failure, as they predicted before hand. I felt rather blue, but in the meantime I received a catalog from the "Johnsons," telling about OLD TRUSTY, and their book seemed to give the facts as they really are and not over-estimating the chicken business, as well as incubators. I then decided to give them a trial I was in a rush to get the incubator and had it shipped to me by express. It arrived in a short time and was at once set to work. I placed 150 eggs in it and hatched 135 chicks. From the 135 chicks I raised 127 broilers. I paid $1.80 for eggs, 30 cents for oil and $3 for feed up until the chickens were large enough for market, but they were not put on the market but used at home, which reduced the grocery bill more than anything that I found.

These chickens were well worth 25 cents each, which would make the one hatch worth $31.75, which was enough to pay all expenses, pay for the incubator and have money left.

When the chicks were first hatched I placed them in an OLD TRUSTY brooder that was given to me by a friend. I began to feed the chickens small grain after they were forty hours old. I had a box attached to the brooder and give the chicks a place to feed, and had the floor of the box covered with wheat bran, which furnished them with a soft place to scratch and gave them exercise. I was very careful to keep the chicks close to the brooder each morning until the sun was up enough to warm the ground; also drove them in brooder each evening before the sun went down. In this way I was not bothered with them taking cold, which generally develops bowel trouble.

I believe every family that is dependent on a salary for support should own an incubator. They do not cost very much, they are well made, simple, durable, easy to operate and are no more trouble to handle than one old setting hen would be. The oil they use would not cost any more than the lice powder will cost to rid the setting hen of the lice and the mites that she hatches while she is setting. An incubator will set any time of the year and won't quit the nest as long as you do your part towards furnishing the oil and cleaning the lamps. The biggest asset is: it is a money saver and, furthermore, it is a money maker if anyone wishes to raise chickens for the market, but there is nothing that will pay as well as an investment in a 150 egg size incubator for she will pay for herself in the first hatch and is good for any number of years, as there is nothing about them to wear out. I wish to further say that my incubator has been doing the same good business since the year 1912.

In my estimation there will be more incubators sold the coming two years than ever have been sold the past five years, as traveling men ask me daily about them and country people are getting to where they think there is nothing better than an incubator to keep down the high cost of living. I have been in several states the past few years, and everywhere I go they all have heard of Old Trusty. They hear that it is a good incubator and about three-fourths of them say, "I have one and she is all right."

Turn Your Idle Hens Into Winter Egg Producers
WHY allow your hens to loaf when you can make them give you eggs a-plenty right at the time when prices are highest? Feed sprouted grain—crisp green feed that you can make yourself for only 15c a bushel with the "Successful" Grain Sprouter. Make three bushels of tempting egg-making feed from one bushel of oats, wheat or rye—increase the egg yield at least 50%—and at same time save ⅓ feeding cost. Write for catalog and 1916 offer we make on the
"SUCCESSFUL"
SECTIONAL ALL-STEEL GRAIN SPROUTER
Made with double steel walls—metal trays—nothing in it to warp, shrink, swell or mold the food. Fireproof. Lasts a lifetime. Large glass doors. Made in sections so you can add more sections as your needs grow. There's a size for your needs whether you keep 50 or 600 hens. Thousands of poultry raisers say they would not be without this wonderful food maker. The newest, most reliable construction ever made in a grain sprouter. Not only turns idle hens into industrious layers but supplies feed for growing chicks—protects health—prevents chick loss. Booklet "How to Raise 48 Out of 50 Chicks" 10 cents.

DES MOINES INCUBATOR CO., 564 Third St., Des Moines, Iowa

WE have been bringing in the pullets from the colony houses this last week and have been very delightfully surprised at the number and quality of them. They have developed finely and the per cent. of pullets has been exceptionally large for the number of chicks hatched. They should have been allowed to run for some time longer and to have dwelt in their summer homes for at least another month were it not for the fact that we are about to start for the coast, and the great exposition, and desired to see them safely located in their winter quarters, before our departure. The son, who is the junior member of this firm, will have full charge of affairs during our absence, and he will certainly have his time fully occupied if everything possible is done for him before we go. The houses have been fully renovated and cleaned for their arrival, and the weather is favorable for their confinement of a few days, while they are taking inventory of their new homes and becoming accustomed to them. They will then be allowed to run out on nice days for the rest of the fall, but not on cold stormy days, as a cold contracted now, may mean no end of trouble later, and we have never thought that there was any thing gained by permitting them to stand around on cold frozen ground; and in the cold fall rains. They are much better off and will make many more eggs when confined in warm, dry and clean quarters. As they are taken from the colony houses they are graded, according to size; birds of a size being put together in a crate and afterwards housed together. It is some-what surprising to see what a difference there will be in a flock of chicks all hatched at the same time and all reared under the same conditions. Some will so far outgrow others that it is hardly believable that they are of the same age. Why this is, I cannot explain, unless it could be traced to the parent stock. I am firmly convinced that success with the growth of chicks must be due in a great extent to the strength and health of the breeders, and for this reason those pullets which have been slow in maturing and which do not appear to be as rugged as they might should be promptly marked, so that next Spring when we are sorting out the birds which will make the foundation of the next season's flock, these birds will not be used; never-the-less, there is no reason why they should not be profitable layers through the winter. Speaking of marking the different grades of pullets leads me to say, that we have been using the colored celluloid bands for the different grades, and find them very convenient, one color means pullets hatched April 1st, while another color means May hatched, and so on, and one can tell at a glance which is which. Royal purple might mean birds reserved for breeders and then if by chance they lost this distinction the band is changed to a different color, so that when the time for mating the breeders arrives it is a much easier task than the old way. A goodly number of our pullets have found homes in other climes, and the report from their new owners has been without exception, satisfactory. They are now laying exceptionally good for the first of October and their eggs have reached a very nice size, but the heavy price for them arrived simultaneously, and is gradually soaring. The last eggs netted forty-eight cents, which is very good for this season of the year. The grain crop is unusually good and prices are lower than they have been for years, which is all in our favor, and will help to make the balance look better. The old hens have not returned to their work as yet; that is, to any marked degree, but they are smoothing up in their new plumage and will soon be ready to do their share. They enjoy every one of the warm sunny days but cling rather close to the house upon cold windy days, feeling that they are not dressed for the season yet. Their combs are beginning to redden and they seem very happy which we know means that they are thinking of their life's work and will soon be busy at it. When this appears in Everybodys we shall be in the "Golden West", where we expect to find the land of "Milk and Honey", but we are prepared to say to all, that we are proud to be children of the Empire State and if they have any better place to live, any better opportunities or any better chicks, they have got to "Show Us".

There are two maxims which every housewife should have in mind, when she enters her kitchen, they are: "Plan your work and work your plan" and a "Place for every thing and every thing in its place". A few simple things kept handy and a little judgment used in the arrangement of shelves, tables and hooks will do wonders toward

lessening labor and saving steps.

The old saying that it is as cheap to sit as to stand, should be observed in the kitchen of all places. A revolving stool of a convenient height will be found very helpful. It is no longer considered a sign of laziness to sit while you work. Have your table and shelves and sink built to suit your own height; stooping and bending tire. Above all things learn to think; in making trips to the ice box, pantry or cellar take things to be left there and bring up others at the same time. Heed the old saying: "Let your head save your heels".

* * *

Doubtless you have all found the ironing board a hard thing to hang away. Nail two large spools to the wall as far apart as the width of the middle of the board. Slip the board between the spools, small end down.

* * *

When baking griddle cakes, instead of greasing the griddle, rub it with a raw potato. The cakes will brown nicely and the disagreeable odor of smoking fat will not fill the house.

* * *

To clean your white felt hat, make a paste of corn-starch and gasoline, keeping the mixture away from the fire, rub thoroughly into the felt and hang out doors to dry. Then brush the dry paste from the hat with a stiff brush and the hat will be like new.

* * *

When bureau drawers stick or doors squeak, pull the drawers out and rub with soap or paraffine, and also rub the edges of the doors likewise.

* * *

In cold weather soak your clothespins in salty water to prevent their freezing to the clothes.

* * *

To Cook Rice

Put in a pan three parts of water to one of rice, bake slowly in oven until rice is nearly dry. The kernels will be whole, white and of better flavor than when cooked in the usual way.

* * *

Nut Bread

I cupful of flour, two cupfuls of graham flour, two cupfuls of sour milk, one-half cupful of molasses, two-thirds cupful of ground nut meats, one rounded teaspoonful of soda, and one tablespoonful of salt. Dissolve the soda in hot water, and bake for an hour in a slow oven.

* * *

Good Salad Filling for Sandwiches.

One cup of whipped cream, a pinch of salt, a little lemon juice and one-half cupful of nut meats; mix and spread between thin slices of bread.

* * *

Walnut Wafers

I cupful of chopped walnut meats, two eggs, 1 cupful of brown sugar, one tablespoonful of molasses and one-half cupful of our.

Mix together sugar and eggs, beaten separately, and add meats and molasses, adding the beaten egg whites last; then drop by teaspoonfuls well apart on buttered tins.

* * *

Baked Onions

Boil in salted water until almost tender, lift out and place in baking casserole, and salt and pepper to taste. Place a bit of butter upon each onion cover with cracker crumbs and bake in a hot oven for fifteen minutes, or until nicely brown.

* * *

Stuffed Baked Apples

Peel large sweet apples and remove the cores, fill with a mixture of chopped raisins, nuts, cinnamon and sugar, and bake in oven until tender. Put a spoonful of whipped cream on each apple when ready to serve.

ALDRICH WHITE ORPINGTONS

The Aldrich Poultry Farms, Station B. Columbus, Ohio, were of special interest to the poultry breeders attending the State Fair, and we, like dozens of others went to view this famous line and to note their progress and quality. Mr. Aldrich is his own breeder and manager and really lives with his birds and it was very pleasing to note his progress and the very large and beautiful line he has this year. He now has (Sept. 1st) fully grown and matured cockerels and pullets that show the best of shape, color and finish. Heads are unusually fine, combs set strong and are even. Eyes grand, bodies full and heavy, breasts deep, broad and full. They are a select lot, full of breeding value, the kind you can bank on for results. We hope in our next issue to give mention to this line fully, but at this time wanted to advise our readers of their beautiful quality and of the early hatched and finished birds seen there.

Turkeys For Exhibition and For Market

Methods Must Be Devised For Growing Turkeys in Semi-Confinement During the First Months of Life

—T. F. McGrew.—

WHEN traveling through the West during the fall and winter of 1874-75, it was not unusual to see a black bear waddling along within a hundred yards of the road—we remember well one instance when Mr. Bruin stole a small porker from an inclousure that was within five hundred yards of the farm house where we were eating dinner. He ran away with his prize, only to be followed shortly by men, horses and dogs—As the trophy of this chase the old pair and two young were brought into town where the meat of the bears was on sale at the shops before night.

Deer, wild turkeys and prairie hens were plentiful. A deer was shot within sight of the small town where we were staying, the day before Thanksgiving. Our dinner of that Thanksgiving Day was composed partly of a portion of that deer and some prairie hens. However, while many thrilling tales of gun, bear and deer within the range of our experience may be told, there are others to relate perhaps quite as thrilling and more in line with our subject, as for instance, two trips to the turkey roost in the State of Iowa:

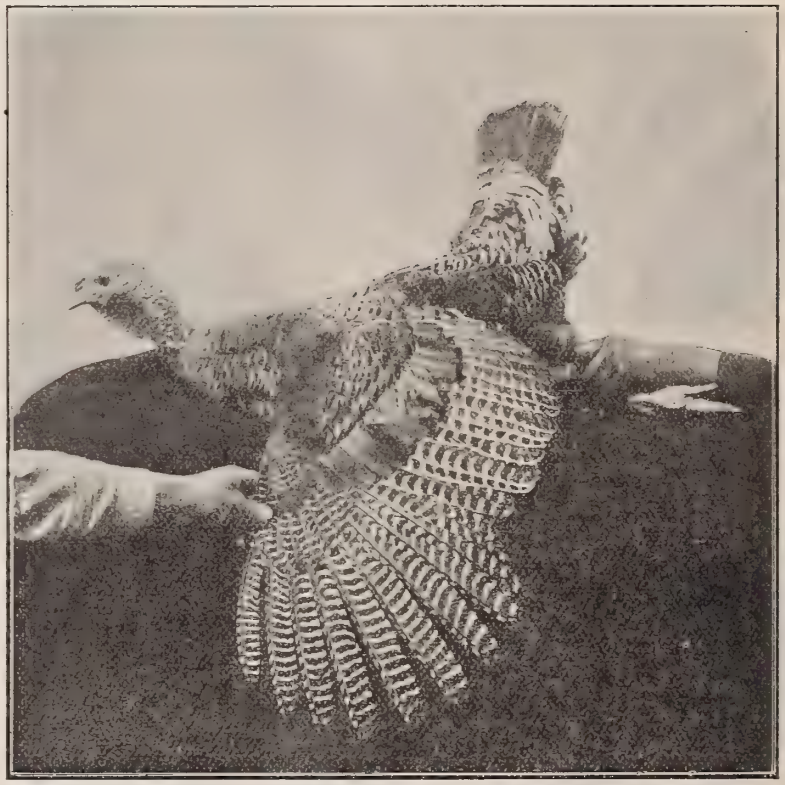
It was a bright, clear morning, just before sun-up, that we saddled our horses for a ride over the hills to a wilderness of trees that was located about twelve miles from a small town. It was about the tenth of November, cool and bracing and we were mounted on horses that took to the chase with pleasure. After a brisk gallop of an hour the guide called a halt and directed a separation of the party of four—one was sent to the right, two to the left and I straight ahead to the top of the hill. My orders were that if I reached the top of the hill and the flock of turkeys were there, I must start them down the valley—when they were fairly started I was to go back over the brow of the hill, ride to the right, down and into the bottom of the ravine, where I would intercept the flock and turn them back.

The call of the gobble came to my ear before I reached the top of the hill—and then, I was almost paralyzed with the sight that met my eyes—There stretched out over the side of the ravine were so many wild turkeys, old and young, that I called them a million. As soon as they saw me they started down the ravine as fast as they could go. I stopped for only a moment—then wheeled the horse to the right, up over the hill and down to the lower end of the ravine—covering about a mile, as fast as I dare ride down the hill; part of the flock had already passed out just as I rode into the mouth of the ravine.

The sight was beautiful:—The sun then an hour high, shown brightly into the ravine—the flock of turkeys came to a halt—frightened to be met by horse and rider on all sides. The older ones of the flock gave one grand gobble of surprise. If only the moving picture man couud have set his machine for the army of feathered life. Clothed in beautiful colors. The plumage glistened as if a thousand mirrors were casting reflections of the sun. We held them there for a short time. I then rode up on the side of the hill and watched the countless throng as they passed down the ravine and out of sight among the trees. Not one of them did we injure.

This was the manner of my first introduction to a flock of wild turkeys. Later in the season when the snow was on the ground we again visited the same locality—this time at night. The moon was shining and some turkeys were captured and taken away to be made use of for a raffle—one, a beautiful young male, was given to me. In the form of a toothsome roast I enjoyed this fowl exceedingly. The wings cut off at the first joint, were with the tail feathers kept for years and highly prized They were a remembrance of my first and only turkey hunt, where the game was so plentiful that no gun was used.

Later, an acquaintance moved from Ohio to Iowa, taking with him, chickens, ducks, geese and turkeys. At my suggestion they killed all the Tom turkeys, depending entirely upon the visits of the wild males in answer to the call of the domestic hens; also they gathered some eggs that were laid by the wild turkey hens. These were hatched under chicken hens and nursed by them; little or no loss occurred with the poults. The young that had gained their vigor through selection by "The survival of the fittest," were as rugged as could be.



Made from an un-retouched photograph, showing the nearly ideal wing of a First Prize Madison Square Garden Winning Bronze Turkey Hen, bred and exhibited by Bird Brothers, Meyersdale, Pa. Their turkeys have been the leading winners at Madison Square Garden for eight consecutive years and we are sure it will pay any one interested in the Giant Bronze to get their 1915 catalogue.—J. T. H.

Some of the turkeys so raised were sent back to Ohio—they were my first introduction to the "Bronze Turkey," and while this variety was well known, prior to this, none so good had been seen in our locality; one, a gobbler, was shown, and scored very high by a then prominent judge.

THE BRONZE TURKEY

This is the variety of turkey most generally kept—they may be found in every land where turkeys are bred—all of them in part a descendant of th North American wild turkey, bred with any black plumaged kind. The

greater percentage of wild blood they carry in their veins the more vigorous and beautiful they will be. The earliest standard description of them for color reads—"Color of plumage, a brilliant bronze hue, which glistens in the sunlight like burnished gold, each feather terminating in a narrow black band, extending across the end." Another clause of color description reads: "Dark bronze, with a lustre assimilating to that of burnished gold—body of plumage black, beautifully shaded with bronze." The entire scheme of "Colortype" embodies the shading of black and gold into a beautiful bronze.

Some of the very best Bronze turkeys grown were shown some years ago by the Fergusons, of Fisher Island. Mr. Nourse, now of St. Paul, who was in charge at Fisher Island before going west, writes as follows of the Bronze turkey:

The coloring of this variety is a ground of black blazoned or shaded with bronze. This shading is rich and glowing, and when the sun's rays are reflected from these colors, they shine like polished steel. The female is not as rich in color as the male, but both have the same color and shadings. Much of the richness of color is lost through inbreeding, as it is improved by each cross with the wild specimens. Of all our domestic fowls none suffer from inbreeding so much as turkeys. This should be guarded against at all times, if it is hoped to gain the best results.

SELECTION OF BREEDING STOCK

Naturally the Bronze turkey should be the largest in size, the most vigorous in constitution and the most profitable to grow. This would be the status of the variety at present were it not that too little attention has been given to the selection of the females for breeding stock. It should be fully understood that size and constitutional vigor come largely through the female, and to have this influence to the fullest extent, well-proportioned, vigorous females in their second or third year should be selected as breeders. Do not select the very large specimens for this purpose; those of a medium size are usually the best. Discard the undersized females at all times, as they are of but little value as producers. Length of shank and thigh, if out of proportion, should not be taken for size; full-rounded body and breast indicate value most clearly; size and strength of bone indicate constitutional vigor, which should be maintained through the selection of the very best at all times for producing stock. When special care is given to the selection of the breeding stock and the grower bears in mind those profitable market characteristics — compactness of form, length of breast and body, and constitutional vigor—the most satisfactory results may come from the growing of this variety. But no matter how much care may be given these conditions, only partial success will come if inbreeding is permitted. The use of oversized males with small females is of less advantage than the use of smaller males with well-matured, medium-sized females.

When breeding for exhibition, the richest colored males and females should be selected. Two or three-year-old females mated to yearling males is a common practice. Mr. Lord, of Rhode Island, used an unusually fine Tom for seven or eight years. This male was mated in his seventh year with hens that were two, three and four years old. The young from this mating were large in size, beautiful of color and very vigorous—Turkeys that will live to such an age, keep well and breed prolifically, are a living proof of health and vigor—such are the kind to produce offspring that will live and be free from disease.

OTHER VARIETIES

The White Holland turkey takes second place perhaps, as to popularity in the show rooms. They should be of medium size as compared with the Bronze. A yearling male of this variety should tip the scale at 24 pounds—a Bronze male of the same age should weigh 33 pounds. Females of the same age should weigh, the Bronze 16 and the White, 14 pounds. The chief features of excellence in the White variety are pure white plumage, type and size, with clear, smooth shanks of a white or pinkish white color—spots of black in plumage and shanks of any other color than white or pinkish white indicate a cross with the white specimens bred from the Bronze or the Narragansett.

When mating this variety select a male that will weigh from 23 to 25 pounds in his second year. His plumage must be pure white throughout—shanks should be smooth, bright and pinkish white; white shanks without the pink should not answer. This male mated to females from two to four years old—these females to be of fine form, pure white, with pinkish white shanks. No female of this variety should be used as a breeder that weighs under 14 pounds at two years old. They should carry this weight when in good breeding condition; not overly fat. Hens that will weigh over 16 pounds at 3 years old should make good breeders—hens of unusual size for the variety are not best—avoid above all the dark shading in shanks or feet—this comes from cross of Bronze or Narragansett. While such a cross may benefit when breeding for market only it is dangerous to use when breeding for exhibition.

The Black, the Narragnnsett, the Buff and the State turkeys are varieties but little bred—each of these have plumage color as indicated by their name. They are all of them of small size as commonly bred—the Blacks and the Narragansett are some of them bred to standard size, which run from 12 to 30 pounds according to age and sex—both of these are worthy of more attention. The general claim of superiority for the Bronze makes them prime favorites to such an extent that but few flocks of other kinds are bred in their purity. Personally we would select the Narragansett above them all—they are, however, so hard to find in their purity, that it would be a difficult task to maintain them as they should be for lack of new blood to mingle with them as needed.

THE BOURBON RED

This variety of turkey is accredited to the mountains of Kentucky as their place of origin. It is thought they have come from the promiscuous breeding of the early day Red turkey, from which the Buff variety was made—with the Bronze and the wild turkey. They were created in a semi-wild state, then domesticated. They are natually of fine form and medium weight and full of health and vigor. Their plumage color is a deep brownish red, tail, primaries and secondaries white. Shanks and toes of a shade of red that is darker than a deep pink—so dark it might be called a pinkish brown.

When selecting this variety to breed for exhibition, choose those of fine form and color, that have good size and plenty of vigor—this same mating will be well for producing for market; they are all of them apt to produce more offspring of inferior color than are the Bronze, the White, the Black or the Narragansett. For this reason no mating can be too good for either or both purposes.

S. E. Upham, of Vermont, writes that the Bourbon Red Turkey is good for that locality. We quote the following from her writings:

This breed of turkeys is comparatively new, and I consider them far superior to any that I have ever raised. Have always thought none were equal to the Bronze turkey, until I decided to try this breed, and I can truly say that I find them the ideal bird. They are very gentle in disposition and do not hide their nests, but lay in the barn or near their home. Have had fine success in rearing the young poults, the mortality among the young being very slight, in fact I have found them not much more difficult to raise than chickens.

When I first read about the Bourbon Reds, I fancied them to be a small, inferior bird, but they are quite the reverse. The male, when mature weighs twenty-eight or thirty pounds, and the female twelve to sixteen.

When there is a scourge of grasshoppers as there has been in Vermont and New Hampshire this year, there is nothing that exceeds a turkey to rid a farm of this pest, as they consider this insect a great luxury. Besides there is no food that will give the farmer as large a profit as a turkey.

BREEDING FOR MARKET

Mr. Brown, of England, says that the majority of turkey breeders make a mistake in mating turkeys that are too young—turkeys do not attain full maturity till they are three years old; thus yearling males and females should not be mated together. If pullets are used they should be paired with males that are two or three years old. It is better not to match eggs from turkey hens under two years old. Only from such maturity can we expect to get healthy offspring. Nothing is of so much importance in turkey breeding as full maturity health and vigor in the parent birds—never kill or sell the most vigorous and best developed Tom turkey. Keep such until two years old and and mate to your very best three year old turkey hens. The young turkeys that have made steady growth—have been healthy adn strong from the begining be sure to sell prior to when two years old produce better than themselves.

To avoid trouble in breeding be sure to sell prior to Christmas, all the male turkeys that are not good enough to breed from. By so doing your flock will be free from the danger of hens being served by males not fit for the purpose. One service of the male will fertilize an entire clutch of turkey eggs. For this reason no Tom turkey unfit to be a sire should be kept later than December twentieth of each year—all surplus stock should be females that will grow into value without doing harm in the flock.

The turkeys that are intended for breeding should not be fed too much fattening food during the winter months—fat turkeys do not lay well nor do their eggs hatch poults that will live and grow to maturity. Two parts wheat and two parts each of oats and corn are good for feeding to the breeding stock during the winter—boiled oats dried off with wheat bran is excellent for them—this to be fed once or twice a week—not oftener. Mr. Nourse says:

Many turkeys have been spoiled by being penned in close, warm houses in the winter. They are intended by nature to live outdoors and an outdoor life, or a close approximation to it, is what they must have for good health and vigor. In ordinary weather of winter, even in the northern latitudes, they roost out of doors with comfort. For severe weather, especially when storms are raging, a shed open to the south should be provided and equipped with a roost well up toward the roof, but back from the front and open side. If the snow blows in, a curtain of burlap or cotton may be let down to cover the open front. In such a place the flock will be comfortable, happy and healthy.

It is never advisable to keep the turkeys in the same pen or even in the same poultry house with hens, ducks and geese during the winter. Experience has repeatedly proven that they will not do well in such company and the successful turkey raiser finds that it pays to provide a separate building or shed where the flock may be entirely by itself. Turkeys are never well satisfied when confined in houses and the constant irritation of their nerves by the flying and running about of the smaller fowls and the quacking of the ducks and calling of geese is more than they can stand with advantage. Moreover, turkeys are inclined to cleanly habits and do best when rosting in trees, far above all filth. A shed provided with high roosts and kept clean is the nearest approach to nature's environment that the northern poultryman can provide for his turkeys during the ocld months.

FIRST PRIZE WHITE ORPINGTON COCKEREL
PALACE NEW YORK SHOW DEC. 1914 BRED & OWNED BY
OWEN FARMS, VINEYARD HAVEN, MASS.

SELECTING THE BREEDERS

Turkey hens that are past two years old and have been strong and healthy all their lives—that are in short good specimens of their kind, may be depended upon for breeding. Such hens must be mated to males that are two years or older and that are full of vigor. From such mating only will poults be bred that are likely to withstand the storms of life that confront them. No one need hope for much success in growing turkeys unless the eggs for hatching come from stock that is healthy, vigorous and well-matured. The lack of vitality now so prevalent in turkeys must be stamped out. This can be done best by selection. Sell all weaklings keep only the best and success will follow.

Dr. Hadley, of Rhode Island, said recently that formerly all blame for weakness in the flocks was directed against the parasites; now he believes that Blackhead is not an infectious disease, but that it is a disease brought about by errors in the management of the turkeys. He tells us that if due to errors of management of the turkeys. He tells us that it is due to errors of management we must find out what specific errors are most to be avoided. He believes that the errors most dangerous will be found in the methods of feeding. He might well have added—and in methods of breeding. We say that the trouble today in the breeding of live stock of all kinds is in the breeding, the feeding and the care and management. Poultry of all kinds are suffering from the loss of vitality. Eggs for hatching produce so poorly that the beginner is often discouraged with his first attempt—only those who have purchased turkey eggs for hatching know the unsatisfactory results that follow such purchases.

If the turkeys of to-day were as strong and healthy as they were forty years ago, the poults would rear themselves. This can only be through selecting of the best for breeding. We repeat what we have written many times. In the breeding of turkeys, eggs for hatching should be selected turkey hens two or more years old, that are of fine body formation and that weigh not less than 16 pounds in their breeding condition.

The hens must be unusually fine in body formation and in strength and vigor—they must have vitality equal to what they possessed in their wild state. Hens that walk about as though their legs were too heavy for them to carry, and that act as if they were scarcely able to eat sufficient to keep them alive, should be discarded, sent away to market and cleared off the farm. Such hens are living nests of disease which they spread to both old and young in the flock

Such hens should be mated to Tom

turkeys that have half wild blood in them or that are all wild, if it is possible to get them. There are people in the country who make a specialty of selling all wild and half wild Tom turkeys. They are worth from twelve to twenty-five dollars each, but one such Tom may make posible the rearing of 100 for market next year, while the lack of the same may prevent the growing of any at all even for your own use.

THE TRENTON FAIR

H. P. Schwab

The poultry exhibit at the Trenton, N. J. Fair, was nearly double that of last year and excepting the New York State Fair. It was the only show seen this year with an increased entry. As usual, it was a quality exhibit, well displayed, clean and seen to advantage by the record-breaking crowds that attended.

Superintendent Harvey E. Rodgers is yearly drawing the specialty breeders to him at Trenton, and we believe under his management this will be one of the big fairs in the near futhere.

Plymouth Rocks in all varieties were large and fine classes. First Barred Rock Cockerel a Gem. All winners fine in shape. Many rich Buffs there.

White Wyandottes also a beauty class, winners in fine condition.

Columbnian Wyandottes strong and well shown First Cockerel, owned by Wilburtha Farms, won Special for Best Bird in Show.

The Wilburtha Farms won Cock 1-3-4, Hen 1-3-4, Cockerel 1, Pullet 1-2, Pen 1. In S. C. White Leghorns, Cock 1-2-3, Hen 1-2-4, Cockerel 1-3, Pullet 3-4, Pen 1-2-3. Single Comb Buff Leghorns, Cock 1-2, Hen 1-2-3, Cockerel 1-2, Pullet 1-2. S. C. Reds, Cock 1-2, Hens 3-4-5, Cockerel 1, Pullet 4, Pens 1-2. All awards in Columbian Rocks.

Speckled Sussex, a rare line of where all Firsts and Seconds were won by Howard L. Davis, Egypt, N. J.

Ducks formed good-sized classes with Pekin in grandest numbers and fine quality.

Geese and Turkeys very nice.

Bantams made a good showing with the Seabright in fine classes.

It was a regular fanciers exhibit, with stock in every class worthy of note, the kind of display we will always enjoy.—H. P. S.

MOUNT AIRY WHITE ORPINGTONS

At Hagerstown.

The Mount Airy Poultry Farms, Powell, Ohio, made their first exhibit of their S. C. White Orpingtons at the Great Hagerstown Fair, winning Cock first, Pullets first, third and fourth, Old Pen first, Young Pen first. This is a good starter and we congratulate Owner C. B. Wolfe and Manager W. C. Young. Do this some more.—H. P. S.

NOTICE—We ask our readers to correspond with Miss Minora Pomeroy, Scotch Plains, N. J., and to aid in making this department one of special interest and value.

* * *

For several years we have been specializing on waterfowl, and four kinds in particular—the Mammoth White Pekin, Indian Runner, White Muscovy ducks and Toulouse geese. We have very successfully raised birds for market purposes, and we have also very successfully raised for exhibition—winning wherever shown, at Madison Square Garden, Grand Central Palace, and the State and County shows of New Jersey. We started on a very small scale and have passed through the many trials and tribulations of the novice, learning most of our lessons in the hard school of experience, until we can at last take our stand among the people who stick and make good. We hope our varied experiences can be of help to others.

The White Muscovey Duck

One of the first questions asked by the beginner is, which breed of ducks one likes the best. Truly we like them all. Many people have told us they find it hard to specialize on just one breed, and we have been no exception to the rule. The Mammoth White Pekin ducks—the "Grand Old Breed" of the duck family—have made good through many years of service, in fact are raised in larger quantities than any other duck in America. The Indian Runners, the "Leghorns of the duck family," will hold their own as long as eggs are eaten. But come with me at mid-day and watch the beautiful White Muscovies as they forage along the brookside and over the green meadowland, or better yet at feed time, when they fly back and forth upon the barn roofs waiting the call for supper, and I will tell you why I like them best of all.

First they are labor-saving. The old ducks will make their own nests, and hatch and rear their young with very little help by man. The only thing necessary is to keep the ambitious mother within bounds for a few days after the ducklings are hatched, so that she does not weary the youngsters with her long-hunting expeditions. As soon as they are on free range they procure by far the greater part of their food themselves, and we feed only at night, to induce home coming. True, they do not grow so fast as the Pekin, but the small amount of feed they consume more than overbalances this account. In the fall of last year we marketed heavier birds, and received a premium over the highest price paid for the White Pekin.

The Muscovies are very hardy and long-lived birds. No winter's day is too cold for them to fly or swim awhile, and at night they are content to nestle down in the deep litter on house or shed floor. They love swimming-water, but when that is not available, are content with merely drinking from a pail. Of all ducks they keep themselves the neatest, both as to personal appearance and surroundings.

Who can deny they are not an attraction for any farm? Their bright red heads and pure white plumage catch the eye of all passersby and people exclaim in wonder as they watch the birds fly back and forth. You say you fear they will fly away? Then clip one wing and they will stay safe near home. Furthermoe they will never annoy the neighbors with their hungry "dinney-calls," for they are a noiselss duck, the only sound they make is a faint hissing.

Thus we have tried to record the characteristics of the Muscovy ducks as they appear to us, but we would be very pleased to answer any questions which may come up about this breed, or about any of the other waterfowl. Perhaps your questions or problems wlil help someone else along. Write to Miss M. Pomeroy, Scotch Plains, N. J., and questions and answers will be published in next month's Everbodys. If you have no questions to ask, can you not tell us briefly of some interesting experience with your ducks or geese? Yours for more and better waterfowl!

FUN FOR FANCIERS

JOHN A. GAMEWELL

Do you want to have some fun? I refer not only to Fanciers but to business men who are seking a hobby to take their minds off of the cares of business.

Well, do as we have done, move to the country, become a commuter if necessary, and breed some Golden Penciled Hamburgs.

We have always been an admirer of finely-bred chickens regardless of the variety. Of course, some have appealed to us more than others.

However, we recall distinctly a Golden Penciled Hamburg Male that was exhibited at the Garden about fifteen years ago, that in our judgment was the handsomest bird we have ever seen.

Although at that time we were making a specialty of Black Minorcas and White Rocks, we would sneak around at every opportunity and gaze longingly at this fine specimen.

We can close our eyes and see that bird as clearly defined today, his image was so indellibly stamped on our mind.

We regretted many a time that we had not purchased him, although we do not know if the owner would have disposed of him.

We made up our mind that some day we would breed this variety as it is truly a fancier's fowl, and we also believe its useful qualities can be developed.

Never have we spoken to a single breeder of whatever variety who has not expresed his admiration for the beauty of this breed.

Several years ago we were obliged to dispose of all our fine chickens as business interests took us to the city. About a year ago we moved to the country again and the first thing we proceeded to do was to look around where we could purchase some Golden Penciled Hamburgs.

We had been out of touch with the "chicken world," so we proceeded to subscribe to several poultry papers and carefully perused them for the advertisements of the breeders of them.

It was surprising to find so few breeders, and those with whom we corresponded had no stock for sale, while some to whom we were referred said they were not breeding them at this time, though they would be pleased to take them up again if the interest in them revived.

We visited several shows and did not find a single specimen shown, though there were some very nice ones shown in Boston.

Well, we finally determined to get started somehow, so decided to purchase some eggs and ordered the best anl as many as we could obtain.

Remember, we are a novice as far as this variety is concerned, but will give you a short account of the experience we have had with them.

Some eggs hatched better than others and we have birds that are nearly five months old. Have found them hardy, easily raised and have lost very few of them.

In fact they did splendidly and we did not lose any of them until they were about two months old, when we had a rainy spell and they moped around for a few days, several appearing droopy, so that we killed them, six if we recall it.

We gave them a little stimulating food and they came around splendidly. From the time they were hatched they have had all the sour milk they could drink, good, wholesome grain, dry mash and green food.

They were confined in wire runs for the first three weeks, then allowed free range. You ought to see them forage—early in the morning out over the clover fields and they are very seldom idle. At night, as soon as they were old enough to roost, we let them sleep in the trees, the result being they are hardy, never had any sign of white diarrhoea and not a symptom of a cold. We tried raising some under hens and some in brooders and we are in favor of the brooders, although the old and experienced breeder of this variety advocates hens.

Some of them are beginning to shed their chick feathers and getting the plumage for the show room. Every morning while shaving we can look out of our bath room window and see them roaming through the clover field and it is a pretty sight.

We have become very much attached to them and can readily see that here is a variety that is a delight for a true fancier.

It will be a decided advantage to organize a club to promote and further the interests of the variety. So let us see what can be done as quickly as possible and bring out exhibits at the Fall and Winter Shows, that are bound to attract the attention of anyone who enjoys seeing a beautiful fowl.

We will have to interrogate older breeders of this variety and experiment ourselves to produce winners in the show room and at the same time develop a strain that will be useful as well as ornamental.

It is going to be rare sport and we wish as many as possible to join us to see what can be done.

Why are there so few breeders of this fancier's fowl? Here is a fowl that will give you an opportunity to display your skill in harmonizing colors so as to produce the finished specimen that will be pleasing to the eye and gratify the tastes of the most ardent fancier.

Now let us see if we cannot organize a club and with the co-operation of the editors of some poultry papers who have kindly offered to aid us and also the superintendents of some of the shows who have also kindly offered to readers what assistance they can, bring this before the public.

If you are a breeder of Golden Penciled Hamburgs, advertise the fact, exhibit them, and write what you think of them.

For the time being you may send your name to the writer at Little Silver, N. J., and if you are not already a breeder and are seeking a variety give them a trial.

When we receive a goodly number of names we will form a temporary organization and appoint an energetic man or woman who has the time and the hustling proclivities to assume the secretaryship.

Let us then decide on a show to hold one first meeting and become properly organized—elect our officers and start a campaign to bring this handsome variety before the public so that there will not be a specimen list that will not contain a number of specials offered for this breed.

We received our first premium list this evening of a large show and not a single special is offered by an individual or the show committee on Golden Penciled Hamburgs. Who is to blame?

The latest edition of the Standard does not contain a representation of the ideal male and female of this variety. Whose fault is it?

The last Garden show, where even if you win the yellow riboon is an honor, did not contain a single specimen of this variety. Why?

Fanciers, here is a "Golden" opportunity to avail yourselves of the privilege of becoming so efficient in producing specimens of this variety that they will not only be a credit to every exhibition but the exhibits will offer special inducements to have them.

VIERHELLER BUFF PLYMOUTH ROCKS

WINNERS AT HAGERSTOWN, 1915

First Old Pen, First Young Pen, Third Cock, First and Fourth Hen, Third Cockerel, First and Fifth Pullet, First Display, Champion Female, Etc. They are Universal Winners at the Best Shows.

Stock For Sale. Write your wants. We can please you. Address,

VIERHELLER BROS. No. 17 Sylvania Ave. PITTSBURGH, PA.

JOHN A. GAMEWELL can and will bring the Hamburgs to their deserved place among our popular varieties. It is not like boosting a new variety, but rather educating the poultry lovers to the many sterling qualities of the Hamburg fowl.

* * *

Secretary Baldwin, of the Pittsburgh, Pa., Exhibition Show, is busy at work on the coming exhibition to be held Jan. 17 to 22. This is the week following Boston and should prove to be a great drawing card for exhibitors. Every effort will be made to make this year's event the banner show of this enterprising organization.

* * *

$50,000,000 was paid out in wages by the various manufacturers and mills in the Pittsburgh district for September. Quite a "chunk" of this will be spent by those game chicken cranks in the purchasing of fancy stock for the shows in the Western part of Penna.

Those steel workers average up a large percentage of "chicken bugs" and know a good one when they see it.

* * *

Write Mr. I. Putman, Route 115, Elmira, N. Y., for information regarding his plans for making a home-made brooder. These plans are accurate and full information accompanies same.

* * *

The Winter Poultry Exhibitions will soon be on with a rush and time will tell who will be the successful exhibitors at these annual events. Now, get busy, you that have some good ones and who perhaps are a little weak kneed in showing, and resolve to make at least one or two shows the coming months.

* * *

Don't you know that sometimes stars are left out of the show room, just because the owners are not up to the mark in knowing what constitutes a show specimen. Study your birds, learn them and no where else are the lessons better learned than by placing your birds in competition, with a competent judge to place the awards.

* * *

Geo. H. Kitchen & Sons, Hanover, Pa., on three entries of Buff Leghorns won three first prizes at the Hanover, Pa., Centennial Poultry Show, September 13 to 17, and this is the second largest class in the show. Mr. Kitchen is offering some exceptional show and breeding specimens at astonishingly-low prices. Write him.

* * *

E. K. Eichelberger, Desk A., Hanover, Pa., thus far this season has made phenomenal winnings on his S. C. Reds, at the Allentown, Lancaster and Hanover Fairs, capturing 13 firsts, 12 seconds, 8 thirds, 6 fourths, on a total of 33 entries.

It was the writer's privilege to handle several of these winners and they are indeed a choice lot. Mr. Eichelberger is the post-master at Hanover, Pa., a gentleman and a fancier of true type.

We recommend his line of Reds to our readers knowing that satisfaction cannot help but result to the buyer. He has both young and old stock for immediate sale at prices most reasonable. Whether you desire a bird to show or a pen of breeders, the same consideration will be shown you.

* * *

Over three thousand copies of the October issue of Everybodys were sold through the mediums of the various News Agencies of the country. Every state now has one or more solicitors representing Everybodys exclusively, bringing us the class of readers who are the men and women directly interested in poultry keeping today.

* * *

With Syraucse, New York, showing a record entry, following with Allentown, Pa., Trenton, N. J., Brockton, Mass., and Hagerstown, Md., with large and wonderful exhibits, the fancy poultry business has started off with a rush for the 1915-16 Show Season. Every day is showing improvement along all lines of the poultry industry, which should bring much encouragement and confidence to the breeders and all affiliated with the industry.

* * *

We call your attention to the ad in this issue of E. M. Dutton, Newfane, N. Y., breeder of Single and Rose Comb Rhode Island Reds. They offer exceptional value for sale in both young and old stock. Write them to-day for prices on single birds, pairs, trios or pens. We are

Elbert Wakeman, Sondgates, Maryland, Secretary of the La Fleche Fanciers Association, desires the names and addresses of all interested in this variety. Help Mr. Wakeman to boom this variety by sending in your name as well as any others you know who are breeding the La Fleche.

* * *

The poultry show at the Spokane Interstate Fair, Sept. 13 to 18, was the best ever held in the Inland Empire, both in point of numbers and in quality. Upwards of 600 birds were entered, and there was keen competition in many classes. The fact that the molting season was on in Spokane County prevented many from showing, but more than 200 were selected as fit to exhibit at the Panama-Pacific exposition. J. G. Dickson was the superintendent of the show, and D. E.Hale, of Chicago, the judge.

Commenting on the show, Mr. Hale said:

"I was surprised at the high quality of the exhibits. The Rhode Island Red class was as good in respect to quality as that shown in Chicago last winter."

GOLDEN PENCILED HAMBURG breeders and prospective breeders of this beautiful variety, we want to organize a club, create an interest, and exhibit what you have at the Fall and Winter Shows. An energetic, hustling man or woman wanted to assume the secretaryship. Get busy and send your name to

Little Silver, N. J.

SUNSWICK BUFF ORPINGTONS

At Hagerstown.

Honors are coming fast to the Sunswick Poultry Farms, South Plainfield, N. J. Their line of S. C. Buff Orpingtons made a new mark at the late New York State Fair this year and now we have to chronicle another victory for them just made at the Great Hagerstown Fair, when they won Cock in a rich class. Cocks first, second and third, Hens, fourth and fifth, Cockerels, first, second, third and fifth, Pullets, first, second and fourth, Old Pen first, Young Pen first. Champion Male and Champion Female.—H. P. S.

WILL YOU DO THIS?

When writing advertisers, mention "Everybodys." Thanks.

ANDREWS BARRED ROCKS

To win a ribbon at Hagerstown's Great Show in Barred Plymouth Rocks, is proof of superior quality. It is a test of merit and we are always pleased to congratulate the winners. This is now due to O. B. Andrews, Chattanooga, Tenn., breeder of the "Efficiency" Strain, who at his first exhibit there won Old Pen 1st, Hen 4th, Cockerel 2nd, Young Pen 2nd. Mr. Andrews has been breeding successively for years and has a line of character and worth.—H. P. S.

ALL READY FOR A GOOD MEAL

If you want eggs this winter---or if you want your birds to fatten up quickly---
Get a Pail of

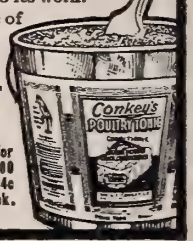
Conkey's POULTRY TONIC

and start feeding it now.

Conkey's keeps their organs in strong working condition; they have an appetite for their food and that means EGGS or rapid fattening.

There's nothing in Conkey's Poultry Tonic that can hurt your birds---no cayenne pepper--nor filler--just good medicines that help nature do its work.

Get a Pail or Package of your nearest dealer or write us for prices.



The G.E. Conkey Co.
1007 Conkey Bldg.
Cleveland, O.

Use Conkey's Roup Remedy for colds and Roup, 25c, 50c and $1.00 packages, postpaid. Also send 4c for valuable 80-page Poultry Book.

ENGER'S BARRED ROCK FARM

Have won more First, Second and Special Prizes during the last three years than all our competitors combined at Cleveland, Ohio's winter Shows and the Forest City Exposition, Cleveland's Summer Show. This great winning proves beyond all doubt they are Ohio's foremost strain of Barred Rocks.

If it's a prize winner you want, write us today. Prices reasonable. Send for descriptive booklet. Fifteen acres devoted to Barred Rocks.

GEORGE W. ENGER, Station E, Bedford, O.

Single Comb Rhode Island Reds

Winners at Ohio leading shows the past two years.

At seven shows I entered 27 birds and won 13 firsts, 6 seconds and 3 thirds. Entered four pens and won 3 firsts and 1 second.

The Value of An Established Strain

E. S. Aldrich

THERE are many people who are seeking standard bred birds, who do not understand why the prices charged by the specialist for birds of any established strain are worth much more than the bird that in appearance may be its equal, and who buy a bird from a huckster, who has bought them from—no one knows who—in preference to one from an established strain whose appearance does not quite strike his fancy.

One who does not know the relative value of the different points, will very probably select the bird which is more beautiful in preference to the one which shows strength, and stamina; the bird with five point comb almost identical with four or six points whose legs are nearly twice as heavy as the one he chooses.

A beginner in the business may do as a customer of ours did, who was beginning with the breed; object to a bird sold at off time in the year at half the regular price, because his comb showed a slight depression called a thumb mark, not knowing that the first cockerel at Madison Square Garden, that year had a comb almost identical with the bird sold which was a relation of the prize winner. This bird later won 1st prize at a large state show.

Of course, the men of experience who show at the largest shows realize that if they expect to breed their own prize winners, they will stand a far greater chance to breed them from an established strain, than from a sire or mother of equal appearance, whose pedigree is unknown, and they know that a bird from an established strain that is itself a winner at a large strong show, will be far more likely to beget a far greater proportion of first-class birds, than one that has been the product of a chance mating, and that such a bird is very valuable.

This is the principle well known to the breeders of fast horses, when many a fast trotter is sired by a father whose ancestors were fast, even if he himself was not so fast as some of his ancestors.

So much as to the value of the established strain from the breeding standpoint, and now let us see as to its value, from the money side—its selling price.

No man, except the amateur, is willing to do business at a sacrifice, in order to get a name in any competition. No other man will knowingly spend his time and capital without a fair profit. It is expensive to start a plant for standard bred fowls. A location near a good shipping point is necessary. A tract of ground must be well drained, and with an abundance of shade. In order to raise one thousand young birds a year, several acres of ground will be required; this will cost several thousands of dollars, if well located.

While the small buildings may be portable, a number of permanent ones will be required to make the plant convenient and fit for the business. Incubators, brooders and other fixtures will run up into hundreds of dollars.

A man starting this kind of business to make a real success must have intelligence enough to run almost any business, and some experience in the business itself; and unless he is an expert in it, will have, for a time at least, to employ an expert at a large salary, to superintend the raising and preparation of the birds for exhibition or sale.

We will suppose that a man sees a variety of chickens that pleases him. He knows its advantages and also its defects, and believes that in its state of development it is a valuable variety, and believes that it is susceptible of great improvements in many respects, and that when so improved it will take rank with, if not above the other most popular variety. He has learned to judge the variety, and he attends the exhibitions and visits the established farms of the variety. He takes the best Journals, and learns the standing of the various breeders, and the class of birds which win at the larger shows.

If the bird is a foreign one, he learns of the leading breeders is the land of its origin. He learns that A has a stock that is above the ordinary in certain points. B, a stock better in other respects. C, for prize-winning males. D, for prize-winning females. E, has males of good weight and strong of bone. H, has birds of better egg record, in number, but not so many in the winter or his birds are not up to the standard of weight, etc.

If the breed is a composite one, he learns that the birds of A will often revert to the type of one of the original ancestors. Those of B, to those of another and of C, to those of another; for example, one White Orpington Breeder is troubled with blue legs, another with white ear-lobes, and they tend to be light in weight, as the Leghorn or Hamburgs are; another breeder has heavier birds but they do not lay so well and tend to show stubs and red or black feathers from the Cochin blood.

He starts out to eliminate all the defects as nearly as possible, to get type, purity of color, standard head points, proper size and number of eggs, laid at the season when most valuable; in other words, to make the breed as nearly perfect as it is possible for a variety to become.

In order to do this, he must select the best individuals from the different sources, always taking those whose brothers and sisters, fathers and mothers showed the fewest defects, and to do this he must start with the best that mony will buy in order to make the improvements in the shortest time. When a first-prize cockerel at the best shows in the country costs from $300 to $1000 and pullets $100 to $200. one can

——LOW CROFT——
R. F. D. 1, Box 108. Pemberton, N. J.

see the amount of capital it takes to start a farm of this kind, and this is the only way to avoid many more years of time waiting for the desired result.

Then there is, of course, the cost of caring for the birds, using trapnests, keeping a record of the birds, not only of the males in the pens, but also of the females. This is the one way in which it can be determined. If but few chickens are found with a certain defect, this is probably from one of the females which can be determined if all the eggs are marked and the chix punched when hatched. If the defect is general and from different hens then it will be known that it is from the male, that must be discarded as a breeder.

The holding of the contests for the production of eggs has become quite popular in the United States recently, and, of course, it will be of value in determining the number of eggs that should be laid by selected specimens of different varieties, but it should be remembered that the number of eggs laid by a variety in the course of a year, is by no means the only thing that should be considered by a person who is about to select a variety for his own use, or even for commercial purposes.

An inspection of the records of these shows will probably disclose the facts that birds weighing on the average of four to four and one-half pounds will lay more eggs in the course of a year, than the heavier varieties. By a little closer inspection the records will show that this excess in number is because of their laying a larger proportion during the warmer months of the year, and that during the winter season the heavier varieties of good laying quality, will produce more eggs from the middle of November to the 1st of April, and as the market prices of the eggs during the year is considered it is sure that the value of the eggs laid by such breeds as the Orpington will exceed that of the products of many of the smaller varieties.

One other thing which should be considered in this connection; one does not care to breed fowls for eggs alone, the meat value of the poultry industry in the United States would very nearly equal that of the egg production, and if a bird weighing four and one-half pounds should lay fifteen cents worth of eggs more in a year, than one that would dress six and one-half to seven pounds, it will readily be seen that her value would be from fifteen to twenty cents less than one of the varieties of the heavier weight. If there were five million Leghorns and the same number of Orpingtons, you would see that from an economic value, the Orpingtons would be worth from one to two million dollars more than the same number of Leghorns.

If these facts were put before the people so that every farmer and every person raising fowls for their own consumption, could understand the facts, we can readily see how greatly the country would be benefitted by the change from the smaller to the high producing heavy varieties.

The time will come when this difference will make a very great item in supplying meat products for the whole country. The ordinary party engaged in the production of poultry is not likely to consider these facts, unless they are called to their attention and, of course, Poultry Journals which are not published for any special variety may have some hesitation in giving them prominence for fear of its effect in decreasing the advertisements of the varieties whose disadvantages are shown by their publication, as the publication of such facts would probably arouse the resentment of the breeders who might be injured if they were made known clearly to all people.

THE RESOURCEFUL SOUTH

In an interview on the improved business situation James E. Pedder, division superintendent of Bradstreets, at Atlanta, Ga., said: There is business in the South, lots of it, and it is getting better every day. The recovery from the depression caused by the breaking out of war has been wonderful. This recovery has not been local, but has covered the entire South. There is plenty of cheap money in the banks which is easily procurable for legitimate business, and the cotton mills are running day and night. The South's debts are smaller owing to nine months of enforced economy. Whether war continues or not we will have a ready market for every ounce of foodstuff we can raise or cotton we can grow. The only man who will complain of business conditions is he who will not go after it. My reports show that business is getting better and better. The fall trade will undoubtedly be the best we have ever known.

THE BROCKTON, MASS., FAIR.

A Great Quality Show, Well Cooped and Finely Displayed. — H. P. Schwab.

This was our first visit to Brockton, Mass., where yearly one of the leading fairs of the East is held and where the number and quality of poultry shown has made this one of the famous fall shows. Brockton was all we expected. Its Poultry Exhibit was one of exceptional quality and value. All the classes were well filled and in each was seen the kind of stock that has the right to win everywhere. The classes of White and Barred Rocks, Reds, Orpingtons, etc., were of superior merit, strong in quality, with a good evenness all through the entire exhibit.

The judging was of high order, quickly done and the public admitted by 3 P. M. on Tuesday. In poultry 2291 birds were entered with Pigeons numbering 1324, making a total of 3615 birds. Superintendent Fred. W. Rodgers had his week planned well, all arrangements seemed to be perfect and it was good to see how cleverly every detail and every department was handled under his care. He deserves the best we can say of him.

Light Brahmas formed a beautiful class, shown in extra large coops to advantage. W. A. Hendrickson, Milton, Mass., won Cock 2-5, Hen 2-4-5. Cockerel 5, Pullet 1-5, Pen 1. J. W. Shaw, Cock 1-4, Hen 1-3, Pullet 2-3. F. S. Barton, Cockerel 1.

In Black Langshans, J. F. Robinson, South Weymouth, Mass., Cock 1. Hen 2-3. Cockerel 1-3, Pullet 1-2, Pen 1-2. Another winner was T. D. Smith, Hen 1, Cock 2, Cockerel 3, Pullet 4.

Barred Rocks, a splendid class, also one of the largest out this year, First Cockerel, First Hen and First and Second Pullets very select. The winners were H. N. Plummer & Son, E. C. Coff, W. W. Carpenter, Lambert's Poultry Farm, W. E. Tower, F. E. Sherman, etc.

White Rocks, one of the best classes ever seen at a Fall Show. First Cock a wonderful bird in type, fine head and the best of style. First Cockerel also one of the select kind. The Mirimichi Poultry Farms, Foxboro, Mass., made a record of credit with a line that was noted for years and is superior to-day. They won Cock 1-2, Hen 3, Cockerel 1, Pen 1-4, Special Shape male. In White Wyandottes, Cock 2-4, Hens 1-3, Cockerels 3-5, Pullet 4, Pen 1. In S. C. Reds, Hen 1, Cockerel 1, Pullet 1, Pen 1. For real all-around quality, this line belonging to W. H. Soart stands high for every purpose.

Geo. H. Pollard, one of our best-known White Wyandotte breeders won Cock 1, Hen 2-4, Cockerel 2. The White Wyandotte Poultry Yards won Pullet 1.

S. C. Reds were one of the largest classes, quality very fine and the class in these and Rose Combs were well and satisfactorily handled by Judge Geo. W. Tracy. Among the winners were Mirimichi Poultry Farm, G. W. Little, W. B. Parker, E. W. Sturtevant, E. F. Benson, E. O. Cornforth, Geo. H. Chandler, C. P. Hamm, Buck Bros., A. E. Alden, W. H. Nobbs, etc.

Buff Orpingtons, a quality class, with the winning Cockerels of type and rich color. Here Miss Hooker won Cock 1-2, Hen 3, Pullet 5. Geo. E. Bessom made a killing on Cockerels by winning all five prizes. while T. H. Kite-Powell won Cock 3, Hen 1, Pullet 4, Pen 1. Sunset Poultry Yards won Pullet 1 and 2.

Dark Cornish formed a select class with first Hen a beauty, one of the best seen.

Anconas, good quality classes, many fine birds here in the winners and in others as well.

Black and White Orpingtons, good quality, but rather small classes for these popular varieties.

The Leghorns in all varieties were a disappointment in size of classes.

Ducks and Geese were all well represented in all varieties. The Rouen's particularly good, as was also the Runners.

Bantams a fine showing; Pigeons, extra good and extra large.

WILL YOU DO THIS?
When writing advertisers, mention "Everybodys." Thanks.

Just to give you an idea of how our Prize Cups are appreciated by the Associations who have already received them. Read this offer on another page of this issue.

Kennett Mo., Sept. 15, 1915
Everybodys Poultry Magazine,
Hanover, Pa.

Gentlemen:—Iam enclosing list of twenty-five subscribers, secured by Jas. Pool. Also money order for $6.25 to cover same. I am indeed glad to know that these people will have twelve numbers of your splendid magazine, as I believe that their reading of this excellent poultry literature will be of great benefit to the poultry industry in this country. The articles contained in your magazine in the next year will tell them more than we possibly could. I am expecting it to increase the attendance at our show this year. The interest stirred up will surely work for our benefit.

Very truly yours,
Dunklin Co. Poultry Association,
ROBERT HALL, Secretary.

THE BARRED PLYMOUTH ROCKS OF TODAY

(Continued from Page 527)

terment, with a clear idea of the desired shade of color and style of barring. It was but a question of time to insure it for time to come. While, as stated, the improvements were gradual, the climax was evidently reached during 1905-1906, from which time on greater time or greater quality and more rapid improvement were noted. It came in jumps and bounds, and affected the entire make-up of the variety. Shape, color and barring were seen at their best, with a combination of each to such a degree of perfection thot it was evident that a new epoch in Plymouth Rock history had arrived, a fact the breeders were quick to note and to take advantage of. This was partly due to several causes, the foremost one being that the years of careful mating and breeding were returning results; that the male and female were drawing closer together in color, as well as in barring and style of barring; that they were closely matching each other; and that the narrow barring of even width along with the marvelous evenness of sound color from tip to tip, and in all sections, had been produced and was an accomplished fact.

The result of all this is the Barred Plymouth Rock as we have it today, true to breed and variety, with the quality to breed and to reproduce highest quality in numbers unsurpassed by that of any other breed or variety. Now as lfty years ago they are leaders with the make-up and inbred greatness that ever insures for them first position among all kinds and varieties of poultry. The fundamental principles of a general all-purpose fowl must combine the qualities first found and introduced by the Barred Plymouth Rocks. Hardiness, strength of constitution and of production, fertility, quick growing and early to mature, great layers with quality of eggs and meat, all go to make and are an essential quality demanded in poultry for profit, that are found in a harmonious blend of superior quality in the Barred Plymouth Rocks. They are the qualities the originators aimed at and that first brought this variety into favor and which placed them all these years (never more than right now) in the front ranks of profitable poultry.

Chapter III. "The Barred Plymouth Rocks. Shape, Color and Barring," will follow.

THE HANOVER FAIR.

Here, the same as at the other great fairs of this year, the Poultry Department was the feature exhibit. Classes were well filled and quality uniformly high, in most cases of the best. It was a display full of interest, one to attract and Manager Chas. S. Shirk and the breeders that made this possible, deserve much praise. It was a real fanciers' exhibit, charming to see and beautifully displayed.

The judges were J. Harry Wolsieffer, Jas. T. Huston and Geo. L. Young. Their work was promptly done and a satisfied feeling was notileable among all exhibitors and visitors. The exhibition building is large, light and airy, much better than we have seen this year at two Western State Fairs.

CHEAPEST GRAIN FOR CHICKENS

Poultry World, 1873

The cheapest grain that can be given to fowls is Indian corn, which may be served out in all its shapes, cooked and uncooked, for the sake of variety. No one in his senses will, of course, think of confining the diet of his fowls to this one article, whether in any shape or all of its shapes. It must be given together with all the other articles commonly given fowls, but may be the main article in their diet. The annual estimate for each fowl is from a bushel to a bushel and a half. In this "land of corn" our national grain must always be the poulterer's principal reliance and it is fortunate that fowls prefer it to any other.

WILL YOU DO THIS?

When writing advertisers, mention "Everybodys." Thanks.

IN THE GOOD OLD DAYS

Under this head we will monthly publish a select line of articles published years ago that are of special interest to the breeders of this age. We also ask for contributions for this department either in books, Poultry papers or in manuscript form.

WINTER FOOD

Poultry World, 1872

It is hardly possible to speak too emphatically of the importance of providing a winter diet that shall, to a certain extent, take the place of and resemble the food eaten in summer. And in doing this, we must remember that in summer the fowl obtains, by her own exertions many articles which we must endeavor to supply. The grain that was furnished throughout the summer was sufficient, indeed, because it was supplemented by insects, worms, grass and the like. In winter the snow and frost cut off all these sources of supply, and the breeder who thinks that in allowing an unlimited quantity of grain, leaving open barrels of corn, etc., he has done his whole duty to his flock, is very much mistaken. We cannot, indeed, supply the exact articles eaten in summer, but in place of worms, grubs, grasshoppers, we can give scraps of meat, and in place of the vegetables, we can furnish boiled potatoes, raw cabbages, onions and the like. If the household department is managed to this end, the women understanding the matter, this diet can be provided without much extra cost.

LIME FOR LAYING HENS

Poultry World, 1872

It is not certainly known whether birds in the wild state need any supply of lime or not, beyond the amount contained in various plants and other articles of their food. They are not known to resort to crumbled shell or dry bones, as might be supposed. But the domesticated hen is under different conditions. Instead of sitting after having having laid a nestful of eggs she continues laying for an indefinite period, and thus there is a call for a large amount of lime in some one of its forms, a call that shows itself in a most voracious appetite for substances containing it, in those cases where the egg-shells are thin, and the effect of administering it is very soon seen on the shell.

This supply should be carefully attended to in spring, when fowls begin to lay a more rapid rate, and the demand is best met with pounded oyster or clam shells. Pulverized mortar is sometimes used but is not so good. Raw bones can be crushed, and in this case the value of the article is increased by the fatty matters in the cells of the bone. There is a very good article in the market known as bone meal. But bone meal must be perfectly sweet. Fowls have been injured by eating bones ground for fertilizers, containing putrescent animal matter.

RAISING DUCKS FOR PROFIT

(The Poultry World 1872)

It is a common saying that there is no profit in raising ducks for the table, because, "they eat more than they are worth." Let us examine this notion a little.

In the attempt to change grain into meat by raising poultry, it is necessary to keep alive the first pound of flesh gained by a bird while the second pound is being accumulated. We say to keep alive, because animal tissue cannot exist for a moment in a fixed state, but is constantly undergoing waste and repair, and every day and hour that this first pound is supported it is done at the expense of a certain amount of feed. When the second pound has been gained two pounds must be kept alive while the third pound is growing and so on. Now this is mere maintenance of the animal machinery is no inconsiderable amount of the whole cost of feeding an animal, no matter whether it be calf, lamb, chicken or duck, until it is old enough for the table. Consequently the faster the creature grows the less time and cost is necessary to support the first few pounds of flesh acquired while the animal is reaching the desired weight. In other words, early maturity is essential to the economical raising of table fowls. Now we have no domestic birds that mature faster than ducks. Their appetite so far from being an objection is their great recommendation. They eat for good reasons. From nothing, nothing comes. Just try the experiperiment of raising chickens of the fastest growing breed you please in the same yard with ducks hatched the same day (common poodle ducks, or blooded ones either) and feed both species all they will eat, and you will find that the ducks will increase in weight the fastest absolutely, and the fastest in proportion to their weight when mature.

BANGING

Away in the advertising columns of "Everybodys" will find you customers for all you have to sell. Don't take our our word for it, try it.

THE DARK CORNISH FOWLS

JOHN M. PRISKE

The good qualities of the Cornish Fowls have been set forth in the poultry journals in such a satisfactory manner of late, that there seems little need of my attempting to elaborate on the subject of the merits of our breed, in an article for a publication that is largely intended for those who have already become acquainted with the sterling characteristics of the Cornish Fowl.

I shall endeavor in a humble way to present the impressions of one who has spent some years in England, most of the time in Cornwall, among those generous hearted, sturdy, Cornishmen, who have evolved the greatest fowl in existence, a bird that is as staunch and reliable as is everything with which one comes in contact there.

Even that substantial dish known as a Cornish Pasty has no terrors for my digestive apparatus, in fact, I must confess, that I still have a weakness for that old dish, but my admiration of their fowls exceeds that of everything else.

This species that has been developed and perfected by these West-country folks is inded, the very ideal of poultry development. There could be no spectacle more pleasing than that of a flock of these Dark Cornish as I have been privileged to see them in the county of Cornwall. Now here is where I must answer the question usually propounded.

Have you any such flocks in this country?

At the present time I have never had the pleasure of seeing such numbers in any one flock, neither have I seen the uniformity of type development in the largest collections seen here.

The imported birds are in most cases splendid examples of this uniform type development, but for some reason the birds bred from these specimens have in many cases proven to be utter disappointments. This is due no doubt to a lack of knowledge of the correct balancing of the individual attributes of each bird used in the mating. Do not mistake me, however, and draw the conclusion that there are no competent breeders in America for there are several who are producing birds of wonderful quality, birds that can easily outclass some of the imported Cornish.

So many American bred birds, however, have been a great disappointment in type, especially so in the length of shank, due I believe to the fact that so many of our breeders overlook the importance of the female in their matings. They are most particular, in their selection of the male, in regard to shortness of shank, but there is need of selecting a female of like attributes in order to secure a good percentage of short-shanked progeny.

I have noticed too, this past season, in examining the Cornish in our show classes, that there has been in too many instances a lack of the hardness of plumage that is so essential in a genuine Cornish. This defect has been appparent to a greater degree in the female than in the male. The excuse that in a warm hall the feathers are released, does not deceive one who knows the appearance of a good, hard plumaged bird.

These cochinized Cornish are to be avoided surely, and we should not allow ourselves to be cheated with the delusion that a female having a coat of double penciled feathers has all that need be desired. The color markings are indeed important, but the double penciling seems to be somewhat intoxicating in its effect, goes to our heads, very rapidly, and while in this condition we are apt to overlook some serious defect in the specimen up for inspection. One of the chief characteristics of the real Cornish, is, or should be, an enormous weight for their apparent size, and not vice versa, as is the case with some loose feathered specimens of Cornish examined this season.

Don't misconstrue these remarks to mean that all American-bred Cornish have these defects, or that they are failures, for I have seen some that cannot be beaten by any imported stock for either type or color.

Some have said that the climate of Cornwall is superior to ours, but even the Cornish climate has its faults. I remember one year that I spent there when there were no two consecutive weeks without rain and I have seen conditions on Dartmoor during a winter, that would rival a Lake Superior blizzard.

So far as any benefit of their superior climate is concerned we can enter the race with no handicap.

In conclusion, I would say that the faults I have mentioned are those that in my humble estimation are altogether too obvious and too numerous.

We are no doubt rapidly approaching the time when we shall produce birds that will rival England's best in every respect, but let me urge my fellow breeders to be abstenious in their attitude toward that intoxicating effect of the color markings in the female Dark Cornish, and to pay close attention to the real Cornish characteristics. As the Shorthorn is to the cattle family, the Cornish Fowl is to the Poultry World, a creature that commands one's admiration for its very massiveness. No matter from which prospective viewed, it should indicate great breadth in hard, well-developed proportions, and a breadth that is not produced at the sacrifice of depth in any section. If we search for these developments in the female as carefully as we do in the males, we shall soon see the Stars and Stripes on a few first Crystal Palace Winners.

OLD FORGE
Buff
Orpingtons

As well as winning at America's Leading Poultry Exhibitions, have made wonderful records at the Missouri Egg Laying Contest.

The same blood lines which have produced these remarkable show specimens are firmly bred into our utility line.

FOR IMMEDIATE SALE

500 Cockerels $3.00 to $10 each
300 Pullets $2.00 to $5.00 each

Every one of this grand lot raised on the Old Forge Farm, where the conditions are only such as will produce strong, vigorous, healthy, profitable fowls.

Order today direct from this Ad. Your order will have special attention of P. H. Glatfelter, Owner.

EVERYBODYS Belgian Hare and Pet Stock Department

SOMETHING ABOUT BELGIAN HARES

By U. G. Conover

I WANT to tell the readers of Everybodys something about the Belgian hare.

The Belgian was originally a rabbit, small in size but fine in color, and by a series of matings brought about by the fanciers of England and America, a fine hare has been produced, of a rufus red color, and weighing from eight to ten pounds when mature. However, there are cases on record where they grow considerable heavier, as the writer owned a buck at one time which weighed sixteen pounds. However, this is an exception rather than the rule.

The fecundity of the Belgian make them very profitable. A doe can be bred four times a year without harm to herself as well as her young, and as they average something like eight young to the litter, you can readily see that they will multiply rapidly.

Some writers would have you believe you could breed the doe every 30 days and make an immense fortune out of the business in a year or so.

I do not expect to indulge in exaggeration while I have charge of this department, and in reading my articles I will be pleased if you will bear this in mind.

The Belgian is such a profitable animal that no exaggeration is necessary, if the reading public do not get interested in mere facts then they should let the business alone, and try to get rich in some easier scheme.

What are Belgian hares good for? This is a very likely question that most any one will ask about them who is not acquainted. In fact the writer has seen the time when just such a question would have been asked by himself.

They are good eating as chicken—if not better. Many people prefer them. They grow much quicker than a chicken, it does not take long to grow a Belgian weighing 4 to 5 pounds, and which brings from 18 to 20 cents per pound alive when sold to Commission men for eating purposes. Hares eat much less than chickens, and eat things a chicken does not care for, such as all vegetables in the garden, clover hay, mangle wurtzels, carrots, weeds, etc. I have found by experience that hares do better if fed but once a day, whereas young chickens should be fed two or three times daily.

The writer is not trying to "knock" poultry, far from it, as we have both, and my wife is a lover of nice poultry, but I am simply giving a few facts, and no one need discard poultry to raise Hares. True you cannot raise them both in the same pens, for the chickens would eat up all the grain before bunny would get but few mouthfuls. The ideal thing with Belgians, they can be raised in connection with poultry as a side line to that or any other business.

They feed something like a sheep, in fact about the same kind of food is eaten, and they are very clean. They do not have lice or vermin of any kind.

When the mother doe has her young she takes all the care of her babies herself, therefore, relieving all trouble and care of extra comers from the attendant. The mother hen does not do this, you will note right here is a point in the Belgian's favor.

I want to say right here before any one might think otherwise, that the Belgian never lays eggs, therefore, the hen is a necessity for this function, but for making a great number of pounds of meat in a very short time, then take the Belgian.

Hares can be raised where poultry, hogs and other animals would not be allowed, such as in many towns and cities. They are quiet and a pen or "hutch" 4 x 8 feet, is plenty large enough for a mother doe and her young until weaning time.

Expensive buildings are not required by beginners, as many simply obtain large dry goods boxes and fasten poultry netting in the front which also serves as a door and placed under the dry out of the rains. This would be all that is necessary until you give the business a try out, then if you like them and their care you can go to as much expense as you wish in preparing buildings. The writer did that very thing in the begining and had fine success, but as success creates success, I later on erected some very nice buildings for that purpose only.

Many readers may think the Belgian is just a "cotton-tail" under another name. Nothing is farther from the truth. The ordinary cottontail or wild rabbit seldom attains over three pounds when mature, while the Belgian will go three or four times as much. The wild rabbit has a wild flavor, and the Belgian tastes altogether different, the meat being very white and more easily digested than most other meats, so doctors claim, and is suited for invalids. Any one not knowing the amount of meat there is on a dressed Belgian is much surprised as they make much more than a dressed chicken.

A hare six months old and fried the same as a chicken, makes a delicious dish, and is sufficient meat for a family of eight for one meal.

Because of the high cost of living, and of which meat is the most expensive article, the Belgian will certainly appeal to the laboring man as well as others who desire to reduce the expense of the table. They are just as good eating in the hot summer as in the winter, and is so used by the finest hotels of Cincinnati and elsewhere. Before closing this talk, let me say, there is as much difference in Belgian hares as there is in any kind of stock. If you expect to succeed, purchase stock of a reliable breeder who can easily convince you that he has the real Belgians, and not an imitation. This advice may seem to some not necessary, but let me say there are some breeders offering Belgian hares for sale which have but little or no blood of the Belgian in them, and have more mongrel or cottontail than anything else. The cost of poor stock is only slightly less than the best stock, while the feed and care of both is precisely the same. You cannot raise better stock than you buy, as like produces like.

The difference is purchasing good stock and poor stock will make the difference of success or failure, which will be at your option.

The writer has always thought "what is worth doing is worth doing right."

MARKETING THE FARM EGGS

(By B. F. KAUPP)

The families of the cities want strictly fresh eggs, they are tired of storage eggs and eggs sold them for strictly fresh country eggs which are not (the writer having lived in the city for more than 20 years, speaks from experience) and they are willing to pay the highest prices for them. Will you deliver to them this first class product? Now with the parcel post it is within your power to come in direct touch with the city consumer. How are you going to reach them?

Most farmers look upon eggs as by-product of the farm and in many instances the hens are compelled to forage for themselves and are not provided with proper shelter, feeding and care.

When the hens forage for a living and go without care it may be true that the money their products bring in is clear gain, but on the other hand if they were properly cared for, watered, fed and housed they could be made one of the most profitable branches of the farm. They should be placed on the basis they deserve.

The losses to the egg industry which are avoidable is about 17 per cent. and includes rotten, stale, held, dirty, heated and cracked eggs.

Don't keep broody hens around on the nests used for laying hens. A broody hen is not a profitable hen and if she is not needed in setting and brooding purposes break her up at once—don't put off from day to day until finally she gets discouraged and gives it up herself. If she is broken up from setting she should return to laying in about 10 days. Don't keep mongrels or pullets that don't reach maturity by early winter. Keep clean nesting material in the nests as soiled eggs don't present a pleasing appearance to the city buyer and they don't pay so much for them. Provide special rooms for the setting hens and keep the room closed so they will not be molested. Collect the eggs daily in hot weather. Store eggs in a clean, dry, cool room and market them twice a week. Sell your eggs in attractive packages and sell on a cash basis, delivering only clean, fresh and large eggs. The eggs should weight at least 24 ounces to the dozen. Under such conditions you will find it profitable.

Egg circles are being formed. Every community in North Carolina should organize their egg circle. By a neighborhood thus uniting they can ship their eggs direct to the wholesale firms of the cities. Often, select trade is built up and the eggs delivered direct to the homes of the city through the parcel post. Recently this office made some trial shipments from Raleigh to Washington, D. C., shipping in six dozen cartons. The eggs were all clean, white, selected large and strictly fresh. They brought seven cents a dozen more than they would have brought on the Raleigh markets and three cents above the top quoted price. In shipping in cartons it is advisable to wrap each egg separately in paper so that each egg will be held securely in its compartment and not shake.. The box should be maked in large letters on all sides, "EGGS."

The breakage in shipping by parcel post has averaged 11 per cent., that is out of 88 packages of eggs shipped in cartons where the eggs were packed in either wheat bran or cotton seed hulls there were 12 which contained one or more broken eggs. Of 20 packages shipped by express, some in baskets, others in cartons or wooden cases there were two or ten per cent. that contained one or more broken eggs.

LESTER TOMPKINS' RHODE ISLAND REDS

BOTH COMBS

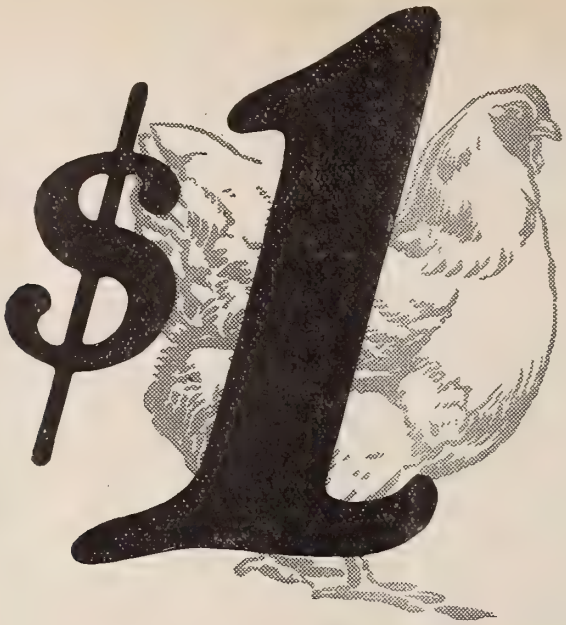
The Greatest Winners For Ages at the Greatest Shows held in America.

The TOMPKINS Blood Lines are the foundation of Rhode Island Red success. Right now I have the Best Stock ever to offer to you for select breeding. If you want to Win, win with the Tompkins Strain.

Mated Pens and Trios a Specialty

My absolute Guarantee of Quality given to all, write me today, please, for Mating List and Wants. Address.

LESTER TOMPKINS Box E Concord, Mass.



Put the price of one hen into a subscription for The Country Gentleman. It will keep you up-to-date in your poultry yard every week for a year

The Poultry Calendar is a weekly reminder and guide for everyone who keeps chickens. It provides a timely schedule for every detail and gives the best methods for the fancier, the commercial egg and meat producer and the amateur. It will keep you from forgetting what to do and when to do it. It will give timely advice on breeding, feeding, hatching, brooding, remedies for diseases and pests, and plans of houses, coops, trap nests, roosts and feed hoppers. Every issue gives practical experiences of practical poultrymen everywhere.

* * *

The Best of All Farming Everywhere is covered in the scope of this national agricultural weekly. Every state, every kind of farming, every crop, all kinds of livestock and all farmers' interests are touched by the largest staff of contributors on agricultural topics.

* * *

Answers to Your Questions by Mail through our R. F. D. Letter Box will bring you solutions of hard problems as they arise. More than a hundred experts are employed for this service and it is entirely free to our readers. Simply write a letter, enclose stamped, addressed envelope and you get the advice of the best authority we can find.

FOURTH ANNUAL INTERNATIONAL EGG LAYING CONTEST

Report of the Egg Laying Contest for the Month of SEPTEMBER

The present or fourth laying contest at Storrs is now on its last legs as there is only one more month to go. During September there was a total production of 12,921 eggs, some 2500 less than for the month of August but relatively more than 2500 better than for the corresponding month a year ago. Thus the egg yield for the month of September averaged 23¼ per cent for all breeds and varieties which brings the average production per bird up to a little over 144 eggs each or just about the production for the entire year in the preceding competition. To state the case differently the hens are now relatively more than 6000 eggs ahead of last year, or the whole month of October ahead of the game. The subjoined table furnishes a comparison for the eleven months between the present contest and the preceding one and shows the best pens in the principal breeds and also the average for all pens.

Breed	1914	1915
Rhode Island Reds	1763	1875
White Leghorns	2000	1925
White Wyandottes	1958	1881
Experimental Pens	1979	1895
Plymouth Rocks	1580	1613
Average pen score—all breeds	1378	1443

At the end of eleven months sixty-one hens including Barred and White Plymouth Rocks; White, Buff and Columbian Wyandottes; Rose and S. Comb Rhode Island Reds; White and Black Leghorns; and Salmon Favorelles have laid 200-eggs each or more. In last year's contest the number of 200-egg hens was about 7½ per cent of the birds competing. In the present contest 6 per cent of the birds entered have already laid 200 eggs and it is believed that some 70 more individuals will reach this mark, or a total of 13 per cent of the birds entered in the contest.

The 10 best individuals to Sept. 30 are as follows.

R. I. Reds No. 261
St. Albans, Vt. .....242 eggs
Barred Rock No. 59
Storrs, Conn. .....239 "
Wh. Leghorn No. 584
Storrs, Conn. .....235 "
Wh. Wyandotte No. 993
Stillwater, N. Y. .....234 "
Wh. Leghorn No. 857
Ballston Lake, N. Y. .....225 "
Wh. Leghorn No. 722
Calverton, N. Y. .....224 "
Barred Rock No. 2
B'kf'd Ctre, Conn. .....223 "
Wh. Leghorn, No. 806
S. Coventry, Conn. .....223 "
Barred Rock No. 21
Mt. Carmel, Conn. .....223 "
Wh. Wyandotte No. 142
Hoghton, Eng. .....222 "
Wh. Leghorn No. 613
Red'g Ridge, Conn. .....222 "

The accompanying table gives the standing of the Experimental pens. It will be noted that the milk fed pens continued to gain on the check lots as they have for the past two or three months. They are now 977 eggs ahead as compared with a lead of 843 at the end of August. The Experimental Pens all taken together average 147 eggs per hen as against 144 for the average of all other pens.

Breed	Pen	No Milk	Milk
Barr. Rocks	5 & 6	1096	1744
Wh. Wyand's	19 & 20	1403	1669
Rho. Is. Reds	37 & 38	1667	1429
Lig. Brahmas	45 & 46	1023	1105
Wh. Leghor's	59 & 60	1675	1895
Total		6865	7842

MISSOURI CONTEST

The ten highest pens in this contest for the eleven months are as follows:

Pen
40, Barred Rocks .....999 eggs
34, Barred Rocks .....996 "
6, S. C. Wh. Leghorns....944 "
10, S. C. Wh. Leghorns....914 "
0, S. C. Wh. Leghorns....913 "

S. C. BUFF S. C. WHITE

MONMOUTH FARMS LEGHORNS

SURE WINNERS AND LAYERS

Made the Seasons Record at the Great New York State Fair 1915.

S. C. BUFF Cockerel, 1 Pullet 1-2, Cock 2-5, Hen 3, Old Pen 1, Young Pen 5. Best Display and Specials. S C. WHITE Old Pen 1, Young Pen 1, Pullet 3, Display2. This was one of the largest and best classes ever shown AT GREAT BARRINGTON. Mass. We won every first prize and championship on both S. C. Buff and S. C. White Leghorns.

Cockerels and Pullets fully developed and in perfect condition to win anywhere. Yearling stock of richest quality. Start right with

MONMOUTH S. C. BUFF OR WHITE LEGHORNS

We have 3,000 selected yearling hens and pullets in perfect laying condition backed by our best "Blood Lines" also a grand lot of "Line Bred Cockerels" to offer. Properly mated Pens and Trios a specialty. Write for prices and circular now. We are both loosers if you do not purchase some of these remarkable birds. Address

Wm. Stanley Hill, Owner, New York Office, 103 Park Avenue
Monmouth Farms
John Lockwood, Supt., Box 54 Freneau, Mon. Co., New Jersey.

3, 14, S. C. Wh. Leghorns.219 "
4, 32, Wh. Ply. Rock ....218 "

The five highest pens for September are as follows:

Pen
10, S. C. Wh. Leghorns....100 eggs
0, S. C. Wh. Leghorns.... 94 "
34, Bar. Plymouth Rocks... 93 "
18, S. C. Wh. Leghorns.... 90 "

Pen 10, S. C. White Leghorns, owned by J. R. Money, Butler, Mo., won the cup for September by laying 100 eggs.

NATIONAL CONTEST

The ten highest pens for the eleven months in the National Contest are as follows:

Pen
21, S. C. Wh. Leg., Eng...882 eggs
1, S. C. Wh. Le., Penn'a..806 "
19, S. C. Wh. Leg., Eng....805 "
75, Rho. Is. Whites, Ill....786 "
74, S. C. Reds, Penn'a.....745 "
3, S. C. Wh. Leg., Penna..736 "
29, Bl. Leghorns, Georgia..733 "
43, Wh. Orpingtons, Wis...722 "
76, Rho. Is. Whites, N. J...721 "
8, S. C. Wh. Leg., Ken. ..708 "

The five hens which have the highest records for the eleven months are as follows:

Hen Pen
129, 21, S. C. W. Leg, Eng.214 "
2, 1, S. C. W. Leg., Pa.206 "
277, 43, Wh. Orp., Wis....200 "
131, 21,S. C. W. Leg., Eng.196 "
73, 13, S. C. W. Leg.,Eng.194 "

The five highest pens for September are as follows:

Pen
74, S. C. Reds, Penna .... 94 "
76, R. I. W., N. J..... 91 "
73, S. C. Reds, Missouri... 86 "
35, Anconas, N. J. ..... 80 "
21, S. C. W. Leg., Eng. ... 79 "

The total number of eggs laid in this contest for September was 2871.

The cup was won by pen 73, Woodman & Smith's S. C. Reds, with a record of 94 eggs. Their address is Wycombe, Pa.

Altoona, Pa., August 22, 1915.
H. I. Co., Salem, Va.

Within a radius of 10 miles, we have the Cholera among the poultry and breeders in my immediate neighborhood have lost from ten to fifteen hundred birds inside of three days. The disease came so rapidly that no one knew it. And when the birds started to die, no one knew it was the Cholera. As soon as I saw in different breeder's yards, th° birds dropping to death like flies, I immediately inoculated my whole flock of 200 birds, mostly prize winners,with "OCULUM," and none of my birds have died on account of this dreadful disease. Everybodry around here wonders why I do not havs any loss, my answer is, I use"OCULUM."

Everybody is doing it now.

Mrs. R. E. Knauss,
Ass't. Sec. American Polish Club.

Read the "OCULUM" ad in this issue headed—"Easy Way to Get Eggs" and then get a trial bottle. It's only 10c. You will always be glad that you did. Ed.

PRIZE SILVER CUP

For every association that will send us 25 subscriptions at 25 cents each. These beautiful cups are just what your association needs to draw a big entry and any exhibitor will be glad to win it. Our

RUSSET-BACKED THRUSH

Length 7¼ inches. Among thrushes having the top of the head and tail nearly the same color as the back, this one is distinguished by its tawny eye-ring and cheeks. The Pacific coast sub-species is russet brown above, while the other sub-species is the olive-backed thrush. The remarks below apply to the species as a whole:

Range: Breeds in the forested parts of Alaska and Canada and south to California, Colorado, Michigan, New York, West Virginia, (mountains) and Maine, winters from Mexico to South America.

Habits and economic status: This is one of a small group of thrushes the members of which by many are ranked first among American songbirds. The several members resemble one another in size, plumage and habits. While this thrush is very fond of fruit, its partiality for the neighborhood of streams keeps it from frequenting orchards far from water. It is most troublesome during the cherry season, when the young are in the nest. From this it might be inferred that the young are fed on fruit, but such is not the case. The adults eat fruit, but the nestlings as usual are fed upon insects. Beetles constitute the largest item of animal food and ants come next. Many caterpillars also are eaten. The great bulk of vegetable food consists of fruit of which two-fifths is of cultivated varieties. Where these birds live in or near gardens, or orchards, they may do considerable damage, but they are too valuable as insect destroyers to be killed if the fruit can be protected in any other way.

The Leech Market

Speaking of wild things whose lives have been upset by the war, there is also the leech, known among American kids as "blood suckers." There are thousands of old-fashioned folks in England who continue to believe that illness comes from having too much blood in one's person and that the thing to do is to be bled, either by a lance or a leech, and they prefer the leech, who does his work without leaving scars. But the leech market went dry. A physician of one of the great hospitals wrote a public statement complaining that the armies of Europe are fighting over some of the best leech fields in the world. They are probably trampling to death leeches that are greatly needed in England. Leech patrons, however, rested easily when two days later another statement appeared to the effect that a fair supply of leeches was being obtained from Australia. They didn't have the same Latin name as their European brothers, but they had just as good suckers and just as deep a thirst for blood.—By William G. Shepherd.

HUBBARD'S POULTRY SECRETS

—BY—

Chas. Hubbard, Manager, Foxhurst Farm

Treating on Mating, Feeding and conditioning Fancy Poultry for the SHOW ROOM.

Written by a man whose reputation is known to every exhibitor at Madison Square Garden and America's greatest exhibitions.

Disclosing to the public every secret Mr. Hubbard has used in placing Foxhurst Farm's Black Orpingtons among the undisputed CHAMPIONS of the WORLD, as shown by their 12 consecutive years' record at Madison Square Garden.

Many an otherwise good bird has failed to win because it was not shown right.

This Book Will Tell You How.

..THE HOUDAN..

For the Fancier and the Market Poultry Man.
By T. F. McGREW.

THERE does not seem to be the least possible doubt as to the early existence of fowls having five claws. The earliest writers of agriculture make this very plain. Both Calumella and Pliny mention fowls having fine claws, as the most to be depended upon. Calumella wrote in the year 35 that "Those hens are recorded as the purest breed which are five-clawed, but so placed that no cross spurs arise from the legs." Pliny wrote in the year 77, "Superiority of breed in hens is indicated by the upright comb, black wings, ruddy visage, and an odd number of toes." He also wrote that their combs were sometimes double.

The main features with both is to call attention to the five claws or toes on each foot in addition to this Pliny wrote, that upright or double combs are best for hens. This would indicate that the lay-over comb of the Italian fowl was an indication of inferior quality. The second point of value; Calumella wrote that these hens should not have cross spurs growing from their legs. This might be accepted as meaning that they were the best until so old that spurs grew from their shanks. We read in modern literature on the subject (Mowbroy,) when writing of the Polands says: "Perhaps, the genuine sort has always five claws."

Harrison Wier wrote in 1900, that he had seen a Polish hen at the Crystal Palace Show that had five claws and a very large spur on one shank. He also wrote that the five toes were the common appendage of Kent, Cussex and Surrey; also of other breeds in France, Spain, Italy and other countries. The advantage of tracing this is that we may know whether fowls with five claws were so noticeably preferable as early as the year 35, they must have existed long before that time and they were perhaps in competition with Aseel, which were the sacred property of the Prince of India from the earliest date and with other game fowls mentioned in the writings of the earliest Greek authorities long before the Christian Era.

These writings also tell that not only did fowls having five toes exist in Rome over two thousand years ago, but that they were brought to England by the Romans. Kent, England, having been favored with one of the Roman roads would also more than likely be supplied with the best fowls from that country. This would bring the fowls having five claws into that locality, where since has been built up a wonderful class of table poultry, the greater part of all of them having five toes. The earliest writers of England accredit the fowls of Kent, Sussex, Surrey and Dorking to the coming of the fowls from Rome having five toes. We are now ready to ask from what origin or from what mixture was the Houdan made and for what purpose were they made.

The Origin of the Houdan

Edward Brown, F. L. S., of England, in his book, Races of Domestic Fowl, states that the Houdan Fowl was made from the union of Black Polish and Creveoeur, with five-toed fowls. The Crevecoeur be-in largely of Polish descent, the original Houdan was more than half Polish. At the same time it must not be forgotten that the early day Black Polish had crests of small size, the greater part of all of them less than half white, some of them entirely black. The Polish and the Crevecoeur of that time had but very little beard—the real Polish, none. Quite a proportion of them had five toes.

The Houdan was made by the French who work continually for poultry of better kinds for the table. They had the Bresse, the Crevecoeur and the La Fleche and hoped from the union of these or from some of them with the five-toed fowls to have a better fowl for the table than any heretofore bred. At one time there were more Houdan fowls dressed and sent to market from Houdan, France, than were sent of any one kind from any other district in the world. The Houdan was at that time the prime favorite of all market fowls in France.

Wingfield and Johnson wrote of the Houdan in 1853, as the Normandy fowl. They wrote, "The old birds are entirely speckled in black and white;" They have small erect top-nots, not drooping beckwards like a lark-crest. The plumage of the male is much darker than that of the hen. In shape they are lengthy but become contracted towards the tail. The cocks tail is of great length, his comb and wattles are of large size.

HOUDAN HEN—This line cut was made from a photograph of first and medal winner at English Dairy Show, 1914. First Cup Club Show, 1915. Made to show the proper underbody, shape of a Houdan female. When a line is drawn across to conform with the back, the breast and body below this line is almost a half circle.—McGrew.

No mention is made of the style of the comb—Mr. Gaylin describes them in a book written by him in 1865, as having a triple comb, the outside of which opens like two leaves of a book, the center having the appearance of the ill-shaped long strawberry. From then until the comb was changed in America the Houdan had the leaf comb—sometimes called the butter-

fly comb because of it having the shape of a small butterfly, the wings of which are pressed back against the crest, the body resting on the beak. In addition to the leaf or wing on both sides of the beak there was a lump or strawberry comb between the leaves or wings in the center just over the beak.

The chief features to be noticed prior to 1875 are the length of body, the length and width of the breast bone and the fullness of the breast in front. In color they were entirely speckled black and white, the plumage of the male darker than that of the hen (note this). The most remarkable and distinctive feature, the triple comb having two wings or leaves and an elongated lump or strawberry comb between the wings; also they had the five toes or claws on each foot.

The English Standard of 1910 describes the Houdan as being broad, deep and lengthy as in the Dorking; toes five in number and similar to those of the Dorking. Comb, leaf type somewhat resembling a butterfly placed at the base of the beak, fairly small, well defined and each side level. Plumage color, glossy green black ground with pure white mottles, mottling to be as evenly distributed os possible except on the flights or secondaries and in the male bird the sickles and tail-coverts which are irregular edged with white. The black generally preponderates to a great extent in young Houdans, but what mottling there is should be even and clean. Legs and feet pinkish white mottled with dark black.

Dark colored legs undesirable--Let us note here that both the La Fleche and the Crevecoeur have V-shaped or other antler comb and slate black colored shanks and feet.

The American Standard described the Houdans as long in body, deep and plump in breast, compact and well proportioned, having a V-comb and five toes—Plumage color black, about one feather in five tipped with positive white, shanks and toes pinkish white mottled with black. The comb and color description between the English Standard and the American Standard are so marked as to call for comment. If the original Houdan of France and England have leaf combs and evenly mottled white and black plumage why should the country of their adoption change them for features belonging to other fowls? Why should they adopt the V or other antler comb—the true belonging to the Poland Grevecoeur and La Fleche?

In writing to England of our poultry shows a visitor from there makes these comments: "The fowls they call Houdans are Crevecoeurs, comb and all, only their shanks and feet are not so dark and they are slightly mottled with white." We should understand that they have three varieties of Crevecoeurs in England, the Black, the Mottled and the pure white, and while there are very few of the mottled and white, there are enough of them to excite the suspicion of the Englishman as to the mingling of the mottled Crevecoeur with the mottled Houdan of America to get the antler comb and the dark plumage

Mating Houdans

Let us first consider what the English fanciers of prominence have to say relative to mating Houdans for breeding fowls for exhibition. One well able to speak recommends the use of hens in their second season. These hens should be long in body, full in breast deep and broad and they should be mottled evenly with clear white as free as possible from smut or grains and the black with a green edge; the combs should be small and neat and set centrally on the head. Wattles very small. Skull formation should be large, round and protuberant, and thickly covered with evenly mottled crests. The more closely placed the better the crest, which should be large and shapely. Beard is very important, but difficult to get. Special attention should be given to the careful selection of beard and muffling.

The fifth toe should be well set apart and tended upwards, black in shanks and the feet should be discouraged. If the fowl possesses pinky white legs slightly mottled, it is a strong feature and tends to improve the looks of the fowl that has them as well as her offspring.

A cockerel used with such hens should be darker in plumage than the females. The white in his plumage should be mottled on the black and not separate black and white The tail and sickles of the male should be carried a little higher than are the tail feathers of the female. The sickles should have a tinge of green. White sickles are a defect and should never be tolerated in a male used for breeding. Head formation for both male and female must be large and the crest must not be split in the center.

The secretary of the English Houdan Club says one method is to get large two-year old hens with long bodies, tails carried a little low, high tails or fan tails undersirable. Crests large, firm and globular, never loose, divided or split. Plenty of beard and mottling with small wattles and a small neat comb. Shanks and feet should be slightly mottled in black. Avoid those having black shanks and feet. The plumage of these hens should be black and white, not grey. Black should predominate and there should be a fair amount of black feathers in the crest.

A dark cockerel of fairly good size, very straight as to back, tail not upright but rather low, to have long black sickles. The crest feathers should be long and go well back. Avoid the Polish type of head. Most of such fowls have a straight back, very little beard and early hatched pullets that are light in color may be mated to two-year old cocks that are not too dark in color.

To succeed best with the growing of Houdans, females two years old of large size, having body and proportions like those shown in our illustration should be selected. It is an error to suppose that the Houdans should have the body proportions of a Dorking. The under body should be almost a crescent, breast full,

HOW CAN YOU PROTECT STOCK FROM DISEASE

Disease prevention is the keynote of healthy dairy work, poultry stock and live stock. It's the farmer who takes steps to keep disease away that always has the strongest and healthiest work horse, the sleekest and best producing cows, and the finest and best laying poultry.

One of the most modern and efficient means of disease prevention now in use is

CARBOLA
The Disinfecting Germ Killing White Paint

CARBOLA is a scientific combination of pure white mineral paint and germ killing agents. It is not a whitewash or kalsomine and is prepared under the strictest regulations of the Federal Department of Agriculture by expert chemists and paint mixers.

It comes in dry powdered form that can be easily mixed and applied with a wide flat brush or spraying machine, and when properly put on will not peel, crack or rub off. Ten pounds of CARBOLA, enough to make 10 gallons of guaranteed germ killing white paint will be be sent to any address for $1.00, plus delivery charges. On orders for 20 pounds, $2.00, or 50 pounds, $4.00, we pay the charges. Special price for larger quantity. Sample on request.

Philadelphia Poultry Show

Anniversary Show———Tenth Annual

NEW METROPOLITAN BUILDING—BROAD & WALLACE STS.

DECEMBER 14-18, 1915

Thirty-six thousand feet of floor space. A show you cannot afford to miss. The best of judges—the best of everything. Send your name for a Premium List. Ready to mail November 1st. Entries close Monday, November 29.

HENRY D. RILEY, President F. E. GILBERT, Secretary.

603 Lippincott Building, 46 N. 12th St., Philadelphia, Pa.

body long and deep. The males used for such a mating should be as near as possible in shape to those illustrated in the American Standard of Perfection (1915.)

The chief difficulties in the breeding of Houdans is color. We believe that it has been made very plain in this article that the male should be darker than the female and that the body color of both males and females should be a rich glossy black, marked with white, the white markings to have the appearance of being laid on and not mixed in with the black. To breed exhibition Houdans of the most excellent type requires that the color of the fowls used for breeding shall be strictly in accordance with Standard demands. It will be utterly useless to hope to produce show specimens of this breed from fowls having a rusty of grayish shade of black mixed with white. The demands are that the body plumage color shall be rich glossy black with about one feather in five tipped with white.

Knowing as we do that white naturally predominates in the females of the English bred Houdans, we must guard against this by breeding from hens only that have the plumage color demanded in the American Standard and to mate such females with males fully as dark in color as the Standard calls for.

Do not be discouraged with a large percentage of offspring much too light for the Standard demand. It will take years to produce Houdans that will come near to the Standard demand, yet it can be done and the only way to accomplish it is to select specimens that have the size and shape and head formation demanded by the Standard and to use for breeding only those that come near to color requirements; selecting each year the best of the offspring to be shown in the cockerel and pullet classes, reserving the best of them until two years old to be certain that they will hold their color into the second year. If they do hold their color they may be depended upon from which to breed the most desirable type of Houdan for exhibition.

THE WHITE VARIETY

With the issuing of the Standard of 1915 comes the separation of the Houdans into varieties—the Mottled and the White. The White Houdans are a new variety that originated with Mr. Bearman, of Dunellen, New Jersey. They are of the same general type and body formation as the Mottled variety. The Standard for them requires that the shape, crest and general makeup shall be the same as the mottled variety, beak, shanks and toes pinkish white; plumage fluff and web pure white. In breeding this variety the best specimens that can be secured should be mated for size, shape and color, carefully selected, culled and re-bred again until they have been improved or made the equal of or the superior of the mottled variety.

Some of this variety were shown last winter, some of them quite a credit to the originator. We have seen the White Faverolles are bound to become quite popular. We have seen within the last sixty days some white fowls hatched from eggs laid by White Faverolles that would be a credit to the White Houdan family. They were large, heavy-bodied, beautifully formed, white fowls with every feature of the Houdan except that their crests were small, shanks entirely free from feathers. We mention this fact to caution purchasers of the new variety of White Houdans. Be sure that you get fowls and eggs of this variety from those who are known to have them in their purity and who would be sure to send out only the best. It would be a waste of time to attempt rearing White Houdans from anything but the purest and best of stock.

YORK, PA., FAIR

Th 1915 poultry exhibit of the York County Agricultural Society proved to be the largest and best in the history of this old established Fair; Fanciers from all sections of Southern, Pennsylvania, and bordering states showing in force.

Surely the Directors of this Association should now and after their long years of "watchful waiting" come forward and give the Poultry Department accommodations such as they deserve, thus showing appreciation of the efforts made by the officials of the Poultry Department in placing the York Fair among the best of Penna., Fall Poultry exhibits.

Many improvements were made on the old building, as well as better cooping accommodations, yet with all, what York needs is a new and enlarged building, fitted modernly, thus competing with the larger Shows of the East in regard to accommodations.

Many classes were filled and overflowing, with grand quality, with interest keen among the exhibitors, all expressing their intention of returning with larger strings another year.

Much credit is due those who made this year's exhibit possible and "Everybodys" hopes that the directors will another year show their appreciation by giving the Poultry what they are entitled to thru this year's grand exhibit.—J. T. H.

We Thank You

For mentioning "Everybodys" when you write our advertisers.

Young's S. C. White Leghorns

Bred for **Show** purposes and **Laying** qualities. Splendid cockerels and pullets, **also this year's grand breeding** stock for sale at reasonable prices. No **heavier laying strain, no better show birds anywhere.** Raised under ideal farm conditions. Twenty-five years experience. Honest treatment and satisfaction guaranteed.

Oak Grove Poultry Farm

R. F. D. 20. Huntersville, N. C.

$1,569.89 ON A TOWN LOT

Chas. A. Cyphers

Principal

Not connected with any other company

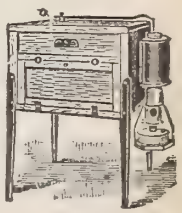
Every man that is proficient in trade or profession has learned little tricks or practices that help to greater accomplishment in his daily work. Some men are a little quicker in observation, or surer in judgment in selecting the best practice of others, and thereby achieve more—accomplish ends others find difficult. When we find such a worker it is profitable to study his methods.

Mr. Carter, a carpenter after a long spell of sickness that left him almost a cripple, undertook to make a living with poultry on a town plot 110x120 feet. The 4th year he carried over 550 layers. The market eggs were all sold through a commission house. The yearlings brought 75c each. A few hatching eggs were sold.

The total receipts were $2,798.07. The total expenditure for the year was $1,228.18.

The Net Profit on the Investment and Labor Was $1,569.89

Here is a "human interest" story that all can learn something from. It will profit you to read the account of this Buffalo customer who is making more real money on a small investment than any one I know. His buildings are fully illustrated, and a full account of his methods given. Ask for the Carter writeup.



When you get all through shopping around you will decide that Buffalo Equipment is what you want. Buffalo incubators and Brooders are the leaders. We give you the best hatchers the world has produced. Our new $15.00 Brooder Stove, up to 1500 chick capacity, is a winner. Get our catalogue.

Buffalo Incubator Co. Chas. A. Cyphers, Presiden

484 Dewitt Street - - - - BUFFALO, N. Y.

POULTRY PROSPECTS AND CONDITIONS

Grant M. Curtis

RECENTLY we addressed a circular letter to about two hundred firms that have had the agency for Cyphers Incubators, Hovers, etc., for a period of five to fifteen years, and asked them for their opinion of the outlook for the sale of these goods during the season of 1915-1916. A majority have replied and in four cases out of five their replies are favorable—that is, they express the belief that the outlook is now decidedly better than it was a year ago. Among the reasons touched on by these business firms are the following:

War Now A Year Old—The old-world war is now more than a year old and the unsettled conditions that existed last fall have passed away, the result being that the banks are now full of loanable funds and people in general are not worrying as they were a year ago.

Bumper Crops Once More—Again this year our country is favored with bumper crops—the largest crops of wheat, oats, corn, barley, rye, kaffir corn, etc., ever produced by us. It is a larger crop even than was harvested in this fortunate country a year ago. Last fall and winter our farming class received unexpected high prices for a bumper crop, and this experience is to be repeated, in large part, this fall and winter.

Lower Cost Of Poultry Foods—However, on account of the continued wet weather two or three of the farm crops suffered more or less, so that it is estimated that about 25 per cent. of the wheat crop, for example, is unfit for flour making and therefore can be sold to best advantage in the form of poultry food. The prices of other grains are considerably less than they were a year ago. At this time wheat that is well suited for poultry food can be bought at 90 cents per bushel, and kaffir corn and milo maize are selling in Kansas City, at $100 to $1.05 per 100 pounds. These prices are decidedly lower than those which prevailed a year ago. They appear to make it certain that poultry foods this coming season are to cost much less than they did last winter and spring.

Shortage Of 1915 Poultry Crop—On account of the high prices of wheat, corn, oats, etc., a year ago, also last spring—with the talk of $2.00 wheat—tens of thousands of persons were deterred from entering the poultry business and still other thousands who were in the business sold off part or all of their flocks, on account of the high cost of poultry foods. The inevitable result was a shortage the past spring in young stock raised. Probably this shortage amounts to fully one-third. In other words, we doubt if more than sixty-five percent. of a crop of chickens and ducks was raised during last spring. Now that we are to have low-cost poultry foods for the balance of 1915 and first half of 1916, it would seem certain that a great many people will take up poultry keeping, or extend their present operations in order to make up for lost time.

High Prices Will Prevail—The market prices of eggs have been good all summer. Here lately they have improved to a surprising extent. At this time fresh eggs by the case are bringing 32 and 33 cents at wholesale in Buffalo, which is four and five cents per dozen more than could be obtained a year ago. It would appear, therefore, that high prices are going to prevail this winter and next spring for market eggs. The same conditions undoubtedly will apply to poultry for table use. The shortage last spring in the crop raised should mean this and we believe it will.

Purchasing Power Improved—No doubt the buying power of the general public is improving daily. The great farming class has had two "war prices" for their grains, live bumper crops in succession with stock, surplus horses, etc. This has meant billions of dollars placed in their hands, much of which has come from the European countries. As regards industrial conditions, it is well known that our leading cities at present, especially east of the Mississippi River, are manufacturing hundreds of millions of dollars worth of war supplies and munitions. This was not true a year ago. It was not true six months ago. Today the great European nations are going into debt to the United States fairly head-over-heels. This is having the effect of putting back to work tens of thousands of workmen in many lines of industries. It also means a general distribution of immense quantities of cash.

Domestic Trade Improving Also—Better still, domestic trade, both in manufacturing and merchantile lines is improving throughout the country day by day. Of this there can be no doubt. When the farmers are prosperous, the village merchants also do well. Back of the village merchant stands the city wholesaler and the manufacturer. Today we are shipping hundreds of millions of dollars worth of goods abroad, while at the same time our manufacturers and merchants are supplying a steady growing home trade, based on agricultural prosperity. A timidity still exists on account of the "war scare", but this cloud undoubtedly is to pass away soon, and when it does it is absolutely certain, as we believe, that there will be a substantial return of prospertiy—a prosperity that is already dawning upon us.

Will Help The Poultry Industry—All these things are certain to benefit the poultry industry. Speaking for ourselves, we confidently expect a 25 to 50 per cent. increase in the demand for goods of our manufacture, including incubators, brooders, hovers, poultry foods, etc. In this letter we have merely touched the high spots—have aimed to suggest reasons why poultry keeping is to be far more popular than it was last fall and winter—also last spring. The reasons mentioned herewith are those that have been spoken of by our valued agents in the letters they sent us, in reply to our request for their best opinion. We are passing these reasons around, because we believe they will prove encouraging and therefore be of real help to every earnest merchant who can spare the time to read this long letter.

TURTLE POINT FARM, SARATOGA SPRINGS, N. Y.

A letter just received from the Turtle Point Farm, Saratoga Springs, N. Y. Reports by far the largest and best crop of youngsters ever reared at Turtle Point. During the past five years their birds have been prominently exhibited at such shows as Madison Square Garden, Boston, Buffalo and Chicago Never have they been defeated for high honors invariably winning best display in all varieties that they were eligable.

In R. C. Whites, S. C. Blacks and Silvers this Farm breeds without question the best in these varieties. Their winnings year after year has forcibly proved this fact. The Black Leghorn is becoming very popular and is due largely to the efforts of both Mr. Manning and Mr. Anderson. They have given the breed much thought and time and in consequence have produced Black Leghorns of the highest merit. In type they will rival any of their Leghorn cousins. In color they are the equal of any black fowl and above all possess the much sought for yellow legs. Black Leghorns of this sort are a most beautiful fowl. Further the Blacks will prove the best of layers, producing nice eggs.

To the beginner and to those who are looking for an excellent breed of fowls to take up we can not too strongly recommend the Black Leghorn and we do not hesitate recommending Turtle Point Farm as the right and logical place to go for them. Their catalog is free and will give you an excellent idea of their stock. Those who get a good foundation in this variety now will be in a position to reap the heavy business that is sure to follow in this noble variety.

If you wish new blood in R. C. Whites, now is the time to take up the matter of a good cockerel or trio with this farm as they can give you for better value now and better selections than later and it is a rule with the management that first come first served. Write for their catalog to-day.

PROTECTS CHICKENS AND LIVE STOCK FROM DISEASE

Most poultry raisers are of the opinion that such diseases as Roup, Cholera, Blackhead, White Diarrhoea, etc., are unavoidable and are willing to charge dead chickens carried off by these diseases to profit and loss, and let it go at that. They do not seem to realize that these chicken losses can be avoided and that every dead chicken represents so much cash actually thrown away.

Thanks to a remarkable discovery infectious epidemics cannot only be prevented but lice, mites and other vermin can be quickly destroyed without handling the fowl, and rats and mice kept away from the poultry house.

The new discovery is known to the scientific world as CARBOLA and consists of pure white mineral paint with which is combined powerful germicidal elements. It is inexpensive and has shown remarkable results wherever tried..

While containing disinfecting qualities three times stronger than carbolic acid, Carbola is absolutely safe as it is non-poisonous and users speak highly of its merits.

In order to get the best effects poultrymen and live stock owners should paint Carbola liberally on poultry house walls, runs, roosts and nests, barns, stables, pens, yards, cellars, etc. Get it into every crack and crevice. Don't give the germs a chance.

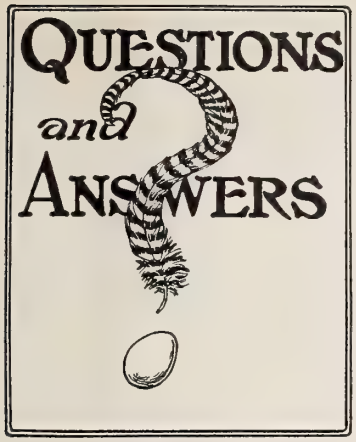
CARBOLA can be secured only through the manufacturing laboratories whose advertisement will be found on page 578 of this issue.

We wish to call your attention to the advertisement in this issue of Ryan Bros., Boxes 141—151, Hendricks, W. Va., breeders of S. C. White Leghorns. Their prices are most attractive and we understand they have a large number for immediate sale

NIXON'S WHITE WYANDOTTES

The product of over 20 years' labor. Cocks, Hens, Cockerels, Pullets, in any number and for any show in the world. Highest egg records proven. Matings composed of my Madison Square Garden and State Fair, 1915, winners have produced the new Standard type galore. Guarantee with every bird to please you. Write me today. Have the best.

CHAS. NIXON, Judge and Breeder : : : : : : : Box 100, WASHINGTON, NEW JERSEY



In this department we will answer questions pertaining to poultry. When special information in regard to diseases, etc., is desired, same will be furnished by mail to avoid delay. Ask your questions, let us help you.

Q. (a) Will you kindly advise me as to the following: I have several half grown chickens that seem to have colds. It differs from canker, in that they run at the nostrils, sneeze and rattle in throat. They eat well, but when the rattling starts, they stop eating.

(b) Why it it that many of my young chicks are slow in feathering? Can you suggest something that will remedy this?

Wilmington, Del. MRS. G. L.

A. (a) Believe your chicks have cold in the first stages of roup, also some bronchial trouble. You will find advertisd in our columns sevral remedies for these afflictions. We believe them all to be reliable and trustworthy and would advise you to write to those parties for a cure as their prepared tablets are usually surer and work quicker than any remedy we could advise.

(b) Chicks that feather slowly should be given plenty soft, rich food, oil meat and sun flower seed are excellent. Poultry mixture is proving a wonderful feather grower. We have used this with pronounced success for three years.

* * *

Q. I had 17 hens during Feb. and March and 16 for the balance of six months, they layed 1974 eggs. One hen layed 152 in six months. Never having kept hens before I would like to know whether this is a fair production.

Bridgton, R. I. F. A. I.

A. You surely have a wonderful lot of layers, as your average is over 240 eggs per hen per year. We consider hens that lay from 150 to 175 eggs per year extra good layers. Please let us know what variety you have, also your mode of feeding, housing, cared, etc. Would like this for our readers, with a full statement of the unmber of eggs received.

* * *

Q. Since I am interested in Poultry, I have been buying your Magazine at the news stand. It certainly is fine and full of valuable information. Will you kindly inform me whether the climate near Billings, Mont., is suitable for successful poultry raising? Do you think it would pay to start in the business there? E. E. B.

Hobson, Mont.

A. Personally, we do not know just what the climate near Billings, Mont., is. We know that poultry is grown in that section to advantage. Climate, in fact, has little to do with successful chicken raising, as they are grown in every section of this country at profit. I believe it would be perfectly safe for you to take up chicken raising there.

* * *

Q... (a) I have 200 Leghorn and Houdan pullets, March and April hatched. How late before it will be necessary to put them in winter quarters.?

(v) Is it better to confine them or allow them out on mild days through the winter months?

(c) Will a house 16x50 be sufficient to take care of my flock. D. W. F.

Rocky Ridge, Md.

A. (a) Chickens should be put into their winter quarters aweek or two ahead of severe weather to get them accustomed to their new home.

(b) We would allow them all the range you possibly can give them. We let our poultry out every day in the year if they wish to go.

(c) Your building of 16x50 is not large enough to keep 200 fowls, under proper conditions for best results. We would allow at least 6 sq. feet coop room to each bird. Overcrowding is very liable to result in sickness. I believe also that you would get more eggs from 125 to 150 females in a coop of that size than you would of the 200.

We are just in receipt of a letter from Messrs J. C. Fishel and Son, Box 50, Hope, Ind., informing us of their late win at St. Louis Fair winning in a great class 1st., 2nd cock, 1st, 2nd, hen, 2 cockerel, 1st, 2nd pen proving that Fisheldotte White Wyandotte ran always be depended upon. Write them for their handsome catalogue telling you of this famous line.

Dr. L. E. Heasley, Box F, Holland, Mich., breeder of Egg-Bred-Winners, S. C. Buff Leghorns, won at the Michigan State Fair, 1st and 3rd Cockerel, 1st, 2nd and 3rd Pullet, 1st pen and all A. P. A. Special premiums. To exemplify the wonderful egg qualities of this exhibition egg laying strain, would state that the 2nd and 3rd pullets were sired by the son of this breeders famous winning hen of the Missouri Egg Laying contest last season, whose record was 215 eggs in 11 mo. Dr. Heasley has demonstrated beyond a doubt that his exhibition strain of S. C. Buff Leghorns are also record layers J. T. H.

WILL YOU DO THIS?

When writing advertisers, mention "Everybodys." Thanks.

Oat Sprouter $2

For $2.00 you can build the simplest, most efficient, easiest to operate and very best oat-sprouter ever constructed. A boy can make one in an evening with no tools but a saw and hammer. Cost of operation for a 40-hen size less than 7c a month. There are thousands in successful operation. Plans with plain directions for building, 25c postpaid.

I. PUTNAM, Route ELMIRA, N. Y.

A NEW VALUE

is being placed on our awards. Don't you feel that you should share in the publicity we are giving our exhibitors?

The Palace Show

is a topic of conversation wherever you go. On all sides you hear breeders say they intend to exhibit and that others intend to visit. This show has become in five years an institution in

CORNISH SUPERIORITY

John H. Porterfield

The origin of the Cornish has been so thoroughly discussed that I am sure we are all familiar with it and we know that any breed which can stand such a crucial test as any bird of game origin has to pass through and still retain their prominence and popularity is worthy of any breeder's due consideration. Such a breed is the Cornish and they are truly deserving of all praise for all qualities which have pulled them through all tests and trials until now they are on a firm and substantial foundation to again show their superiority to all other breeds.

Although it is necessary to tell any lover of the true type of Cornish, a few plain facts will put the idea of Cornish Superiority more firmly in a Cornish Breeder's mind and set the other fellow thinking more seriously of the same idea. A good Cornish of the modern type, is as heavy as the general run of breeds used for their meat production, but invariably with a proper method of feeding, the Cornish will mature more quickly, produce more meat of superior grade at less cost than any other utility breed and the Cornish will outlay any of these larger breeds. They will be better general purpose fowls for the farmers as they have all of these qualities, besides being good foragers and go all over the farm hunting for food and during their rapid growth will surprise one in the way they manage to keep away from the horses' or cattle's feet; and still can hold their own if placed in confinement. As for their beauty, one has only to see a flock of Cornish to be convinced. At first one sees only their awkwardness, but he sees the true beauty and cannot help but admire them.

With other breeds we see everything at first glance, but the Cornish remain a study as long as one sees them and thus one who ever keeps Cornish will always come back to the fold. As in the larger breeds we are deceived in their appearance when we try to judge their weight unless we are familiar with Cornish, but unlike other heavy breeds we will guess less than they weigh instead of more as is the common mistake in guessing the weight of other breeds.

We are now at the turning point of a Cornish career. We are placed in the English class where we belong, and no longer need fear the usual aversion to a Game Bird. We have a bunch of good, honest, thoroughly conscientious men belonging to the Cornish Club, whose aim is to promote the breed rather to introduce people to the breed and then we have the merits of the breed which keeps up one's interest as soon as he gets on to this good thing. So my advice in conclusion is to any Poultryman, is to try the Cornish and I am sure that if the old adage, "The Proof of the Pudding is in the Eating," we have the edge on others in this respect and as you sit reading this article which I hope you will enjoy as much as you do a good cigar, let us thing when we compare Cornish with other breeds as did Kipling in reference to a good woman, "A Woman is only a Woman, but a good cigar is a smoke."

MADISON SQUARE GARDEN

America's Leading Show—Twenty-seventh Annual Exhibition

Historic Madison Square Garden will open its doors for the 27th time to the Poultry and Pigeon Fanciers of the world December 31, 1915, and the exhibition will conclude on Wednesday evening, January 5, 1916.

When the above dates were posted at our last exhibition as a notice to all intending exhibitors for this year's show, they were received with enthusiasm and I find that there is a universal feeling of satisfaction that we have been able to return to our old dates.

All winnings can this year be advertised early and the public will know in ample time for the egg trade in whose yards these winners may be found.

See Us Grow!

50,000

COPIES OF

"EVERYBODYS"

—FOR—

NOVEMBER

This is Practically ALL NEW CIRCULATION

"Everybody Reads Everybodys"

At Madison Square Garden "A Win wins most," for not only are premiums and specials large, but the prestige connected with any award cannot be duplicated and is the greatest asset that any breeder can have.

Sales at the Garden have always been heavy and at long prices, and even last year when the show was held at comparatively late date, the reports of the transfer of birds for good coin of the Realm were very numerous.

This year when so many New York business men are in on the top of a boom it is expected that there will be more business done than ever before.

We had the largest attendanie in our history last year, which we believe is accounted for both from increased interest on the part of the public and wider publicity, and we shall make every endeavor at our forthcoming exhibition to widely distribute the particulars in regard to the show and will, therefore, expect to attract even a larger number of visitors than heretofore.

The fact that the show begins on Friday and ends on Wednesday is most convenient for exhibitors, and the public seems greatly to appreciate the opportunity of coming to the show on Sunday.

The first night of the show will be on New Year's Eve and we know that both the exhibitors and the public will take advantage of this social season in the city of New York

The new departments which were opened three years ago will be continued and we hope to make the exhibitors' lounging and reading room more comfortable and convenient for them and to do everything in our power to make their stay with us as pleasing and homelike as possible. Owing to the greater perfection of the system in conducting the details of the show I trust to be upon the floor a great deal of the time to meet and talk with the friends of Madison Square Garden.

The Bureau of Information has been found to be of great service and its further and more universal use is urged.

The awards will be posted immediately after they are made as was the case last year and we are perfecting a system of shipping the birds home which we believe will meet with the approval of the exhibitors and in which we ask their hearty support. The details of this arrangement will be found in the Premium List.

From advices already received, I am confident that our entries will be extremely large and I am hoping, as usual, to see a large number of new faces in the ranks. We will try to initiate these new comers with warm hospitality and painstaking service. Please remember that the secretary is at all times desirous of meeting and talking with every exhibitor upon the floor and that the latchstring of his office is always out.

Those who are really desirous of receiving a Premium List will please send their names to me as soon as possible as we are endeavoring to perfect a new address list and to do the work ourselves so that it may be properly done.

A number of Poultry and Pigeon Specialty Clubs are to meet with us. New specials are to be offered and with an Educational Exhibit which we believe has never been surpassed, we feel we can entertain and interest all.

Yours very truly,
CHAS. D. CLEELAND,
Secy and Supt.

Eatontown, N. J.,
October 1, 1915.

H. F. Rikhoff, 528 Occidental Building, Indianapolis, S C. Brown Leghorn breeder has been successful in raising an exceptionally large number of ducks the past season. Among these are a large percentage of high grade breeders and show birds. This line has been shown and been winning consistantly at Madison Square Garden, Chicago, Coliseum and Middle West exhibitions during the past several years. If in need of either high class show specidens or breeders you will find them here.

"Oculum is winning such testimonials as the above from every state in the Union. We urge our readers to try it. The H. I. Co. have been carrying an ad with us for years. They will refund your money if "Oculum" is not satisfactory to you.—Ed.

WILL YOU DO THIS?

Geo. H. Burgott, Lawtons, N. Y.—Silver and A. O. V. Leghorns and Javas.

Judges of Pigeons will be announced in December issue

* * *

TRI-STATE FAIR POULTRY SHOW

The 1915 Memphis, Tenn., Poultry Show set a new standard for Southern Shows. It was great both in quantity and quality and so well staged that many of the seasoned exhibitors were surprised. It was the general opinion of visitors and exhibitors that it was the greatest show ever held at this season of the year. For a September show the quality was unusual.

Thirty-two hundred exhibits caged for competition overflowed the regular building and caused the hasty construction of an annex to hold the turkeys and water fowls. In addition to this, twenty well filled display pens and the large exhibition pool for ducks brought the total close to four thousand.

Fourteen states were represented by their best. Classes were all large and well balanced. The Barred Rocks led shading the Leghorns and R. I. Reds by a small margin. Three hundred and sixty-seven Barred Rocks The R. I. Reds numbered two hundred and seventy-nine.

The White Rock carried the third largest class of the Show, numbering two hundred and forty-seven and included the Champion Pen, a well matched pure white. The White Leghorns fell short of the 1914 showing, numbering this year only two hundred and thirty-six birds, but these were of excellent quality and type. This class furnished the Champion Cockerel. The Orpingtons followed the Leghorns in number. The Wyandottes filled all classes in whites, buffs and partridge and the buff and partridge rocks showing was representative. Nearly evry standard and some non-standard varieties were cooped in numbers sufficient to interest the visitor

Unsolicited the out of town exhibitors presented a token and a vote of thanks to the Tri-State Poultry Association, etc., the hard-working secretary, C. W. Merker, and efficient manager, Charles Frank, and all were full of praise for the show and its success.

* * *

GET READY FOR GREATER BUFFALO

The Greater Buffalo Premium Lists are now being mailed to thousands of prospective exhibitiors. Inquiries from as far east as Portland, Me., and from several large exhibitors in the south including Augusta, Ga., Birmingham, Ala., and other southern cities have been received. Our Middle West poultry keeping friends are also enthusiastic about exhibiting at Buffalo's Big Thanksgiving Week Poultry Event.

The Greater Buffalo Show is held in the Broadway Auditorium which has excellent accommodations for taking care of a large number of breeders and a large attendanse. However, it is expected that this year's show will be crowded to its caapcity.

The entries close Nov. 10th or just as soon as all the cages have been engaged. There is over $11,000.00 offered in Regular and Special Prizes, being divided so there are liberal Gold Specials and Sweepstake purses on most all varieties. On some of the American classes the specials amount to over $200 on a single variety.

The National Bantam Association, the State Branch of the American Buff Wyandotte Club, the National White Wyandotte Club and the Blue Andalusian Club of America will hold their Annual Club meets at the Greater Buffalo Show. Scores of other clubs are being represented with their club specials. Sec'y Wm. O. Jennings has been working overtime for the past four weeks geting out the premium list and arranging for special exhibits.

W. M. Anderson, manager of Turtle Point Farm, Saratoga Springs, N. Y., who so successfully looked after the detailed work of the enormous New York State Fair exhibit this year, has been engaged to superintend the show. A more careful, painstaking superintendent could not be found.

Twenty-three of America's best known judges have been engaged to place the awards as follows:

Maurice F. Delano, Vineyard Haven, Mass., Barred, Buff, Silver Penciled and Partridge Rocks.

A. O. Schilling, Buffalo, N. Y., White Plymouth Rocks and Blue Andalusians.

W. C. Ellison, Elma, N. Y., Buff Wyandottes.

J. W. Andrews, Dighton, Mass., White Wyandottes

Ira C. Keller, Prospect, Ohio, Partridge, Silver Penciled, Silver and Gold Lace Columbians and Black Wyandottes.

H. P. Schwab, Irondequoit, N. Y., R. C. Rhode Island Reds, Columbian Rocks and Buckeyes.

James W. Simmons, Geneva, Ohio, S. C. Rhode Island Reds.

Len Rawnsley, Columbus, Ohio, all varieties Orpingtons.

Frank W. Conway, Welland, Ont., Canada, Sussex, Dorkings, Faverolles, Cornish, Malays and it Games.

F. L. Platt, Swanton, Ohio, Brahmas, Cochins, Campines and Houdans.

F. G. Bean, Collegeville, Pa., Langshans, Javas, Black Leghorns and Exhibition Games.

Geo. J. Kerr, Trenton Jct., N. J., S. C. White Leghorns.

Fred Kummer, Butler, Pa, all varieties of Leghorns except black and white

W. M. Anderson, Saratoga Springs, N. Y., Anconas and Buttercups.

M. L. Chapman, Browns Mills, N. J., Minorcas, Spanish and Dominiques.

Ira M. Farber, Sandyville, Ohio, Spangled Hamburgs and Polish.

Wm. McNeil, London, Ont., Canada, Penciled Hamburgs.

Geo. W. Webb, Rochester, N. Y., Turkeys, Ducks, Geese and Pet Stock.

BANTAM JUDGES

George L. Young, Brooklyn, N. Y., Clean Leghorn varities.

Chas. M. Smith, Bay Shore, N. Y., Feathered Leg Varieties

Wm. Brown, All Game Bantams.

* * *

NATIONAL BANTAM ASSOCIATION PLANS BIG MEET AT BUFFALO

Thousands of diminutive members of the feather tribe will cackle and craw at the Broadway Auditorium Thanksgiving Week, Nov. 22 to 27th. The Annual Bantam Club meet of America, held under the auspices of the National Bantam Association, will be held at this show. An attractive and liberal list of Special Prizes on most all varieties of the Bantam family has been arranged for. The judges, which are furnished by the National Bantam Association, are as follows:

Geo. L. Young, Brooklyn, N. Y., Clean Leg Varieties. Chas. M. Smith, Bay Shore, N. Y., Feathered Leg Varieties. Wm. Brown, Camden, N. J., All Game Bantams.

The prospects are that there will be some pretty hot competition in the Game Bantam classes. Buffalo is a noted center for enthusiastic Game Bantam breeders. Many of Madison Square Garden, Boston and Chicago winners claim their home in Buffalo. Sec'y Geo. L. Young, of the National Bantam Association is using every effort to bring out the largest class of Bantams the Club meet has ever had.

Premium Lists of the Greater Buffalo Show giving full information regarding the different specials are ready for mailing. If you have not received your copy, address Sec'y Wm. O. Jennings, Electric Building, Buffalo, N. Y.

* * *

GREATER BUFFALO SHOW GETS NAT'L WH. WYANDOTTE CLUB MEET

The annual meeting of the National White Wyandotte Club will be held in connection with the Greater Buffalo Show, Thanksgiving Week, Nov. 22 to 27. J. W. Andrews, Dighton, Mass., has been engaged to place the

The above shows the Broadway Auditorium, the building in which the Greater Buffalo Show will be held Thanksgiving Week.

awards as a judge and with a class of specials amounting to more than $225, there should be one of the strongest classes of White Wyandottes at the next Greater Buffalo Show that has ever been assembled in this country.

* * *

"WATCH THE PALACE SHOW"

On all sides you hear this slogan. Breeders are making plans to attend A great advertising campaign for entries ends with this month. Never in the history of any show have you seen such effort. No matter where you go, you will see the Palace button, "Meet me at the Palace Show."

From now on the campaign will take another angle. In the press of Country you will see the invitation extended to one and all to visit the show. Get some new blood for the flock. Look over the incubators and appliances. Pick winners for shows to follow.

Every effort will be made to have buyers on hand, in fact just as much work along this line as has been done to win entries.

The Farm Section is being improved and enlarged. Utility breeders are urged to take part in this part of the show and full information will be cheerfully sent

The premium list is in the mail and is full and complete as it could be made. Yet there will be clubs listed in the Catalogue that were too late for the premium list.

Some of the Club meetings are:—American Buff Wyandotte Club, American Houdan Club, American S. C. Brown Leghorn Club, American R. C. Brown Leghorn Club, American Buttercup Club, United Ancona Club, White Faverolle Club, White Houdan Club, N. Y. State meet of Cornish Club, N. Y. State Branch of A. P. A,, American Tippler Club, The Runt Club of America.

Some of these clubs have 5th prizes on all awards to be made with cash prizes on shape and color. It will be necessary to send for premium list to get the full facts.

So far as we know, no association has ever listed forty judges to pass upon its classes.

Herewith is a partial list of judges with the classes each will handle:

1. George B. Weed—Black Orpingtons Black Leghorns, Black Wyandottes.
2. C. H. Shaylor—Barred Rocks
3. Chas Nixon—White Rocks.
4. I W. Mole—Buff Rocks, Partridge Rocks.
5. Paul W. Doll—Silver Pen. Wyandottes, Silver Pen. Rocks.
6. F. W. Otte—Columbian Rocks.
7. W. B. Atherton—White Wyandottes.
8. J. D. Jaquins—Buff Wyandottes, singles
9. J. E. Wilmarth—Buff Wyandottes, pens.
10. W. E. Samson—Silver Wyandottes.
11. H. P. Schwab—Partidge Wyandottes, White. Blue, Ermine and Jubilee Orpingtons.
12. D. Lincoln Orr—Columbian Wyandottes and Light Brahmas, singles.
13. Harvey C. Wood—Light Brahma pens.
14. I. W. Bean—R. C. R. I. Reds.
15. J. W. Simmons—S. C. R. I. Reds and Buckeyes.
16. Geo. W. Tracey—R. I. Whites, White Minorcas, Javas, Red Caps.
17. J. Harry Wolsieffer, Buff Orpingtons.
18. Frank L. Platt—Campines, Sussex.
19. F. W. Aubry—Faverolles.
20. F. C. Sites—Langshans, Cochins.
21. H. V. Tormohlen—Brown Leghorns, S. C. Leghorns.
22. J. C. Punderford—White Leghorns.
23. H. J. Fisk—Buff Leghorns.
24. F. G. Bean—Anconas.
25. Daniel Shove—Houdans.
26. Wm. G. Minnich—Minorcas, Polish, Hamburgs, Andalusians.
27. Chas. T. Cornman—Dark Cornish.
28. John W. Ward—White Cornish.
29. W. M. Anderson—Buttercups.
30. Jas. Glasgow—Games.
31. John Brett—Waterfowl.
32. Geo. Young—Clean Leg Bantams.
33. Chas M. Smith—Feather Leg Bantams. Jas. Glasgow—Game Bantams.
34. George Feather—Pigeons.
35. Jim Wood—Pigeons.
36. F. W. Gorse—Pigeons.
37. F. W. Snow—Pigeons.
38. Jas. Glasgow—Pigeons.
39. L. G. Plath—Rabbits.
40. W. H. Tabor—Rabbits.
41. Murray N. Donald—Rabbits.
42. Louise Mirick—Cavies.
43. Mrs. Harriet B. Furners—Cats.
44. Mrs. Walter MacCammon—Cats.

There is still time to make an entry at the Big Palace Show.

The Grand Central Palace is a big building, but unless all signs fail, it will be tested to its capacity and no doubt entries will be returned. We urge you to make sure of yours. by early action. At all shows entries have to be returned for correction. If you wait until the last minute you miss your chance to exhibit. Write now to L. D. Howell, Sec'y, Mineola, N. Y.

Entries Close November 22d.

"Watch the Palace Show."

PHILADELPHIA POULTRY SHOW

All poultry fanciers will be very much interested to hear that the management of the Philadelphia Poultry Show has been able to secure the New Metropolitan Building, Philadlphia's largest and best lighted exhibition hall, at Broad and Wallace streets, for this year's exhibition. This building contains about 35,000 available feet of floor space, nearly twice as much as any other building where other shows have been held, and this will permit of cooping the whole show in single tiers which will offer a fine opportunity for fanciers to show their stock. This is the tenth annual show, and will be celebrated as the Anniversary Show and special efforts will be made to make it the best and biggest ever held. The dates selected are December 14th to 18th. Premium lists will be ready. to mail about November 10th and may be had by applying to the Secretary, 603 Lippincott Bldg., Philadelphia.

* * *

Poultry Association Secretaries are requested to offer the following in their premium list:

The American Houdan Club offers Ribbon for Best Color, Ribbon for Best Shape, Ribbon for Best Crest. To be awarded only to members of the American Houdan Club whose dues are paid in full, or to those sending application and fee of $1.00 to the secretary, John A. Gough, 130 Howe St., New Haven, Conn., and becoming enrolled before the opening of the show. Ribbons not to be awarded unless two or more members are entered. Annual year book and membership list gladly forwarded to any address upon receipt of 10c in stamps, sent to the club secretary. Secretary of show should send copy of catalogue containing above offer to John A. Gough, secretary, 130 Howe St., New Haven, Conn.

* * *

Members of the Beaver Valley Poultry Association are now making arrangements for their big eighth annual poultry show to be held at Junction Park Pavilion, Dec. 8-11, 1915.

Several new and interesting features are being added and it is expected the coming exhibition will be the best ever held by the association.

* * *

The Rhode Island White Club of America will hold its National Club meeting in connection with the Ohio Falls Fanciers Association, Louisville, Ky., during Thanksgiving week, 1915. About $100.00 has been offered in prizes for the breed. If you are not a member of the club send $1.00 initiation fee and dues to Nov. 1, 1916, to Mrs. C. M. Vertrees. secretary-treasurer, Ceceila, Ky. For show catalog write, A. W. Haller. secretary, 103 West Market St., Louisville, Ky.

* * *

Newton, N. J. Show, Dec. 14-17, 1915—The secretary has just notified us of many new features adopted this year which should make this the largest show they have ever held, Every breed is remembered and no competition required to win display moneys. A finely lighted hall with excellent ventilation and uniform cooping. Two of the best judges have been engaged, Wm. J. Stanton and Wm. C. Bowman.

Their premium list will be out in a short time. Send for copy to secretary, J. S. Roe, Lafayette, N. J.

* * *

GOLDEN PENCILED HAMBURG CLUB

All lovers and breeders of this beautiful variety are invited to come together at Madison Square Garden during the week of December 31, '915, to January 5, 1916, for the formation of a permanent organization. The meeting will be called for Monday, January 3, 1916, at 3:30 p. m., the location of the meeting place to be announced at the Bureau of Information. Entries should be made as large as possible, in order to attract the attention of the public. See list of specials in the Garden premium list. Communicate at once in regard to specials and other matters to John A. Gamewell, Little Silver, N. J.

* * *

The Fayette Poultry Association, Uniontown, Pa., announce their coming show dates as Dec. 13-18, with Messrs. Kummer and Auerswald, judges. Secretary Endsley writes us that premium lists are now ready for mailing.—J. T. H.

* * *

SUSSEX CLUB MEETING

The Annual Meeting of the Sussex Club of America will be held during the Chicago Coliseum Show, December 10th to 15th, 1915. In addition to the regular prizes, the Chicago show is offering generous cash specials, and the club is offering three handsome silver sweepstakes cups to be awarded the best display of Red, Speckled and Light Sussex. On top of this the Chicago show is offering $30

DO you know that *many* poultry men and poultry women are making their flocks pay that—and more? And they give the credit to *scientific feeding.*

Red Comb Poultry Feed

is the answer. The quick developer of market birds—layers—show birds. Cheaper than you can mix the materials. Sell your grain—buy Red Comb. Used and endorsed by T. E. From all indications, the Greatest Exclusive Poultry Show South, to be held at Lake Charles, La., Dec. 13th-18th, inclusive, will no only be the greatest event of its kind ever held in the South, but one of the greatest ever held in the whole country. The regular cash premiums offered by the association: $20, $7.50 and $5.00 for first and second and third pens, and $4.00, $2.00 and $1.00 for first, second and third singles are indeed unusual. Special cash premiums of $2.50 for best male, $2.50 for best female, $5.00 for best Cock, Hen, Cockerel and Pullet, $5.00 for best bird and $7.50 for best display. In addition to these premiums the Barred Plymouth Rock Club holds its state show and is offering members $45 Gold Specials, also three handsome silver loving cups. The Rhode Island Red Club, as well as the White Orpington Club, also offer their handsome state cups to their members.

* * *

THE GREATER KANSAS STATE SHOW

The Kansas State Poultry Federation show, which will be held in Topeka, Kansas, on December 14th to 16th, 1916, promises to eclipse anything in the way of a poultry exhibition ever held in the state of Kansas. Ideal time, Kiepper Cooping, Low Entry Fee, Good Cash Prizes, plenty of silver Cups, official A. P. A. state show, and no charge at the door are the special features that are bringing inquiries from all parts for premium list, which will be ready for mailing November 15th.

This being a chartered state organization, and have an annual state appropriation insures a successful show, and the free door is something new and sure to bring out many interested in poultry. All the A. P. A. specials and gold medals will be awarded at this show.

Write L. H. Wible, Chanute, Kansas, (the secretary), for a premium list and get in touch with western breeders, who are the real buyers of high class birds.

* * *

KANSAS CITY MID WEST POULTRY SHOW ASSOCIATION

Don't fail to show your birds at the Great K. C. Mid-West Poultry Show, Nov. 29th to Dec. 4th, inclusive; 47 silver cups, besides cash premiums and other special prizes and ribbons. Open to the world. Premium lists now ready. Wm. Hunter, Secretary, 2648 North 22nd St., Kansas City, Kansas.

* * *

OXFORD'S POULTRY SHOW

The Second Annual Poultry Exhibit of the Chenango Valley Poultry and Pet Stock Association will be held in Agricultural Hall, at Oxford, New York, January 11th, 1915. Cash prizes are very liberal. It will be one of the largest and most comprehensive exhibits of poultry ever shown in Central New York. Premium lists can be had upon application to W. O. Cooper, Show secretary, Oxford, N. Y.

* * *

The third anual meeting of the Blue Andalusian Club of America will be held in connec- N. Y., Thanksgiving week, Nov. 22 to 27, tion with the Greater Buffalo Show in Buffalo, inclusive. The Thirteenth Annual Show of the Minnesota State Poultry Association will be held at Minneapolis from January 6th to 11th, 1916. These have been the dates of this Greatest North West Show for the past ten years and the prominent exhibitors of this section of the country are accustomed to looking forward to these dates as a reunion of poultry men as well as the opportunity to see the progress their favorite breed has made during the past year. Numerous inquiries from new exhibitors as well as from the old friends indicate a banner show for 1916.

The Rhode Island Red Club and the Northern Orpington Club have already decided to meet with us and other clubs have it under consideration. Club officers should write to the secretary for the special club inducements.

The Orpingtons will be judged by Mr. Byers, Orpington specialist of Hazelrigg, Ind.

The National Guard Armory has been engaged for the 1916 show assuring sufficient space for all, and making it possible to lay out one of the most attractive rooms in the United States. All poultry breeders are invited to show with us, we have every convenience and facility of any up-to-date exhibition; excellent, cooping arrangements competent judges with national reputations, valuable silver cups as specials and liberal cash premiums. Write for premium list to George M. McCrea, Secretary, Landour Hotel, Minneapolis, Minn.

* * *

Three years ago the American Single Comb Brown Leghorn National Club meeting at Chicago drew the largest entry of this variety ever gotten together at any show and the fifth largest class in the show. For four or five years interest in the old time egg machine has been on the increase and this once popular variety is again one of the prime favorites. The American Single Comb Brown Leghorn Club has taken on new life and is doing much to advance the variety to the first place again.

The old time favorites, THE BROWN LEGHORNS, coming back strong—Popular interest in this variety greatly on the increase—National Club meeting to be held in connection with the Palace Show, New York, Dec. 7th—11th. H. V. Tormohlen, Judge. All breeders of the Brown Leghorn are urged to join the club. J. H. Henderson, Secretary, 127 Kenyon Avenue, Knoxville, Tenn.

* * *

The seventh annual show of the La Porte County Poultry Association will be held January 27—31, 1916, Frank L. Platt, Judge. This will be the banner show of Indiana, bar none, as the members of the association are raising money by giving dances, moving picture shows etc., in order to give big cash premiums and expensive cups. Also they will raffle off a Ford touring car. These efforts are all outside their regular ways of raising money, and the difference in their finances means a better show and bigger money for winners. The premium list will be ready early; be sure to send for your copy.

CANTON, OHIO, FAIR

Mr. J. G. Smith, secretary of the Poultry Department, Canton, Ohio, Fair, writes us that this year's exhibition was one of the best ever held in connection with that fair. Many prominent breeders exhibiting and the exhibits of exceptionally fine quality for so early showing. Much interest is being taken in Canton's Winter event, the management being determined to make the Canton Poultry Exhibition one of the largest and classiest in the Poultry State of Ohio. These two annual events have become of universal interest to not only Ohio poultrymen, but to fanciers throughout the Middle West.—J. T. H.

* * *

At the meeting of the Springfield Poultry and Pet Stock association it was decided that the annual show will be held January 11th to 17, inclusive.

It was announced at the meeting that the Ohio State Cornish club has selected Springfield for its state meeting this year. This will be held in connection with the show of the local organization and will bring to the city some 300 birds whiuh have never been shown here.

Judges selected for the show: Z. D. Struble, of Bacom, and J. W. Ward, of Pennington, N. J., for the poultry; Jesse McCul-

BUFF WYANDOTTE CLUB ANNUAL MAIL ELECTION

President, L. D Howell, Mineola, N. Y. Vice-President, C. E. Coffin, Providense, R. I., F. L. Waterman, Barrington, Ill., S. A. Power, Fairfield, Iowa, W. L. Springs, Winston-Salem, N. C., E R Durand, Toronto, Ont., Can., Secretary-Treasurer, J. E. Willmarth, Secretary-Treasurer, Roosevelt, N. Y. Above officers are Club Executive Committee. Place of Annual Meeting, Palace Show, N. Y. City. This Club has always a very large class at its National Meetings, and there will no doubt be at least three hundred birds in line at the Palace. All Buff Wyandotte Breeders should join this Club. Write the Secretary, J. E. Willmarth, Roosevelt, N. Y., for a Club Year Book.

RED BREEDERS CLUB OF THE WORLD

The Executive Board of the Red Breeders Club of the World have decided to hold the annual meeting of the Club at the Milwukee, Wis., Poultry Show, January 21st to 26th, 1916.

The show is offering the Club fifty cents per bird special prize money (that is if 200 birds are shown they give the club $100 in special prize money, if 300 birds $150 and so on up) and in addition to these cash specials they will give a handsome silver cup for best display in each variety provided there are 150 entries in each.

The membership fee in this up-to-date club is only one dollar which pays your first year's dues.

If you are not a member and are interested in the promotion of this popular breed you should by all means become a member of this wide awake club by sending one dollar to Aaron Fell, Secretary-Treasurer, Perryville, Pa.

HARRISBURG FOR A. P. A. MEET

The A. P. A. State meet will be held in conjunction with the Central Penna. Poultry Assn., Show at Harrisburg, Pa., Dec. 7th to 11th. Inclusive.

The Central Penna. Poultry Assn., is a Chartered organization composed of good business men of the Capital City, and Breeders showing there may be sure of hot competition and hearty welcome.

Drop a card to G. E. Brown, Camp Hill, Pa., for premium list.

* * *

The International Single Comb Black Minorca Club has selected the Kansas City Poultry Show as the place of holding its next anual National meeting. This meeting will bring together more Minorcas than have been seen at any show west of the Mississippi.

The State meet of the American Buff Wyandotte Club will be held. Also a special meeting of the National Partridge Wyandotte Club. The Missouri Branch of the American

Cornish Club will hold its Annual State meet at the Kansas City Poultry Show. Breeders interested in exhibiting should write E. L. Noyes, Secretary, 726 Main street, Kansas City, Mo.

NOTICE

COLUMBIAN WYANDOTTE BREEDERS

Believing the Columbian Wyandotte to be one of our best standard-bred varieties, and to create more interest in their breeding, we offer herewith, open to all, a cup to be known as the Wilburtha Poultry Farms "Challenge Cup," to be competed for at the New York Palace Show, for best Cock, Hen, Cockerel, Pullet and Pen, to be won three years consecutively for final ownership.

Now come and win this.

Wilburtha Poultry Farms, Trenton Junction, N. J.

We wish to call the attention of our readers to the cut of the Homestead Campine Farm, picturing their Young Pen as shown at the Syracuse State Fair, September 1915. These well known Campine Breeders have made a reputation not only from their consistant winnings at America's greatest poultry exhibitions, but from the fact that they have sold hundreds of prize winning specimens to satisfied customers in all sections of this country and foreign lands.

It would be well for all those interested in Silver Campines to write them, asking for their new catalogue which is just off the press press, showing their birds with beautiful illustrations and descriptions of the Homestead Campine Farm. In writing them, mention this illustration as pictured in Everybodys. J. T. H.

MORE BARRED PLYMOUTH ROCK HISTORY

Francis Damond

Having been born and bred in Plymouth, Mass., living there until eighteen years old, Mr. Schwab's mention of Barred Rocks is especially interesting to me. As in small place, everyone then knew everyone else, and my people were well acquainted with the Dr. Bennett, referred to by Mr. Schwab, as the originator of the Barred Rocks.

Plymouth at that time had only about eight hundred population, and I can remember very well hearing my father talk of the Doctor and also speak with pride of several Rocks he had in his flock of fourteen, the rest being the Black Spanish.

As to the breeding to get the Rocks, I know nothing, my people getting a few eggs of the Doctor and setting them under one of his hens. Particularly vivid in my mind is the Rock rooster that headed the flock, as he was a "Screamer" with a big "S." He [illegible] gearing, but he licked everything in [illegible] neighborhood without [illegible].

You know how country boys are for thinking their possessions are always best, and one of my school boy friends, a short distance away, claiming to have a rooster that could whip anything, dared me to put them together. So I smuggled our Rock to a neighbor's barn and they got together. The Rock had a walk-over. I mention this wondering if there wasn't a strain of fighting blood somewhere back there.

All this has no bearing on the Rocks breeding, but to find Mr. Schwab at this day referring to my boyhood home, and a man friendly with my people, makes this old world seem mighty small.

It may interest him to know that the Barred Rock got its name of Plymouth Rock, from the striking resemblance of its bars to the make up of the Plymouth Rock, made historical through the landing of the Pilgrims. The rock is not a granite, although somewhat suggestive. The nearest place that rocks of like coloring and texture have been found is on the Newfoundland Coast, and it is believed this original Plymouth Rock the Pilgrims first stepped on, was brought down by ice to the Plymouth Shore, but it was from the coloring of this rock that Dr. Bennett named his new breed. If I had only known forty-five or fifty years ago how things were going and that Everybodys was coming, I would have had all the data and am mighty sorry I can't go back to those boyhood days.

PATENT OFFICE NEWS.

By Edward W. Kibbey.

The following inventions, which are the latest patented in the Patent Office, will be of interest to poultrymen:

A. An Egg Carrier is shown in Cleveland, Ohio. This invention is a simple device by which eggs can be handled or transported without danger of breaking, the eggs being individually held in the respective carriers, which are thus capable of being handled singly for various purposes, each carrier containing a single egg. The eggs can be readily put in place in the carriers, which are designed to hold any size egg.

The carrier consists of a cylinder, made of cardboard pressed or rolled and cut into shape, with two heads of end pieces of cup shape with a marginal flange of proper size to fit snugly within the cylinder. Each head has a central opening to fit over the end of the egg.

One head is fastened in one end of the cylinder by glueing with the edge of the flange flush with the end of the cylinder. The other head is removable, being slipped into the end of the cylinder and pressed down against the egg which holds it firmly in place. The egg is removed by pressing on the head, which is fastened, and the egg will be forced out, carrying with it the removable head.

B. Vernon Cassard, of Stamford, Conn., has received a patent on his apparatus for killing poultry, which is provided with means for killing poultry in a manner whereby the operation is of least objection to the operator, involves minimum pain to the fowl operated on, and also insures marketable condition of the killed fowl.

The chicken is suspended from a clamp, and after adjustment of its head, the operation of severing the arteries of the neck is performed, mechanically, and, if desired, out of the sight of the operator.

ANDREWS PAPER BOX CO.

Your attention is called to the advertisement on the back inside cover page of the Andrews Paper Box Co., Box E-P 303, Chattanooga, Tenn. The Andrews Efficiency Koops and Egg Carriers are perfection in workmanship and durability. Knowing the needs of poultrymen, Mr. O. B. Andrews, who himself is a breeder and exhibitor of note, has spent considerable time in the perfection of these coops and boxes, thus giving the poultrymen an article which has been made over the plans of a practical poultryman, who realizes that many breeders have by the old style methods of shipping, been paying too much to get their product into the consumers' hands. J. T. H.

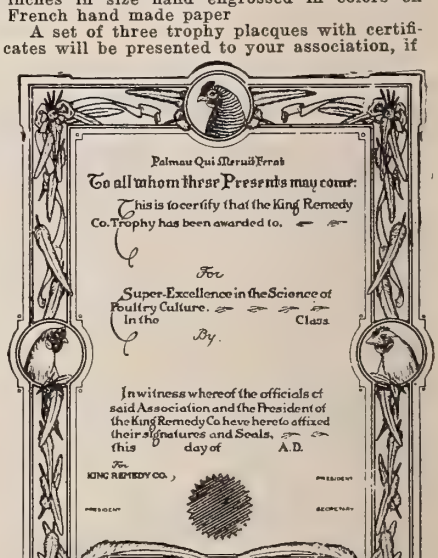
YOU WANT BUSINESS?

Look for it in the great list of "Everybodys" readers; they are progressive buyers and they have the price. Waste in your advertising by patronizing "Everybodys"—the medium that reaches the buyers and will make good for you. Try it.

CONCERNING THE "KING TROPHIES AND CERTIFICATES OF AWARD"

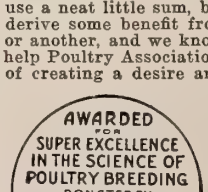
Which we present each year to Poultry Associations and Fairs holding Exhibitions without charge or conditions of any kind. The Trophies are placques made of genuine bronze 2 1-4 inches in diameter, in plush covered, silk lined cases. The certificates of award (one for each trophy) are 9 1-2 by 12 1-2 inches in size hand engrossed in colors on French hand made paper

A set of three trophy placques with certificates will be presented to your association, if



acceptable, to be awarded to the best exhibit of birds in the three leading classes; viz: American, Mediterranean and English.

Each set of placques and certificates costs use a neat little sum, but we feel that we shall derive some benefit from the plan in one way or another, and we know that the trophies will help Poultry Associations in the laudable work of creating a desire among poultry raisers in general to further their interest in, and knowledge of, the science of practical poultry husbandry.



Cuts and suggestive layouts for notice of the trophies in your premium lists, et., will be furnished gratis, and we will be pleased to co-operaet with you in any way that will prove mutually advantageous.

May I have the pleasure of serving you?

Cordially, Chas W. Hakes,
President.

C. GUY MYERS — BOX Z — SIDDONSBURG, PA

TO-DAY

RIGHT TODAY—the Aristocrats are the most Sensational Barred Rocks in the World. This is a big, broad statement—but it is true. This does not mean "they will be"—but it means "They are—To-day."

Ah! You Ought to See Them

What beautiful, beautiful specimens! What Showbirds. If you possibly can, come and see them yourself. I invite inspection, for you will go away simply astonished at seeing so many, MANY showbirds of the HIGHEST rank. If you cannot come yourself, send someone to scout around for you. If he KNOWS Barred Rocks he will buy for you these birds. If you cannot do either one, then do the only other thing you can do—let me send you ANY bird or birds you may wish, for ANY show, ANYWHERE in all America, with this clear, business-like understanding: That you may examine such bird or birds in your own yards for a WEEK, and if they are not BETTER than you expected them to be for the price you paid—please return the chickens to me and I will promptly refund you the FULL purchase price. There are no other conditions, no other strings tied to this proposition. You, YOU, must be satisfied. Is not this as broad, as fair, and clear as you can reasonably expect Is not this a convincing argument showing that the Aristocrats MUST have the quality I claim?

FELLOW BREEDERS—these Aristocrats this year are simply a revelation. Not only in that sharp, dazzling, scintillating COLOR AND BARRING for which the Aristocrats are noted all over the world, but also in fine FINISH, proud, vigorous CARRIAGE, ideal Plymouth Rock TYPE and SHAPE, in almost perfect HEAD POINTS, and in deep orange colored LEGS they are looking for their equals. I am proud of these birds—proud and happy.

If you wish to WIN at ANY show with any kind of Barred Rock—write me—for I can surely furnish such winners. You may order old birds or young, male or female, cockrel-bred or pullet-bred, single or pens—all are guaranteed as above. If you want to be sure of winning, you simply MUST have Aristocrats.

Halbach's White Plymouth Rocks

are assuredly the leaders. This is the weighty verdict of America's Best Judges. They have made the greatest records ever approached and as usual will again be found in the strongest competition of the season at the

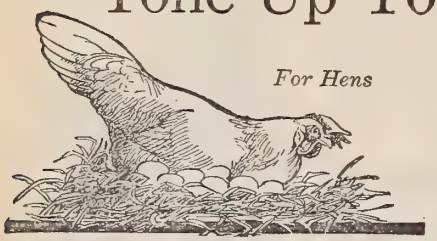
Coliseum Chicago Show

This is the annual meeting place of the American White Plymouth Rock Club and will be the greatest quality show of high class White Rocks ever caged. We will have the most sensational string ever exhibited. A strong statement. Watch the awards.

In the meantime, If you want to win at your show, if you want a trio or pen properly mated, your money will buy most if you come to the acknowledged Champions. My prices are reasonable. We know we can please you. Satisfaction guaranteed. Send 20c for large illustrated catalog.

H. W. HALBACH, Box E. Waterford, Wis.

Charc-Oil Will Round Out and Tone Up Your Whole Flock



For Hens

For Cocks

Read This Letter

Charc-Oil is a Medicated Charcoal.

Everybody knows that pure charcoal is

A Wonderful Corrector

of all intestinal troubles. But Charc-Oil is better—it's pure hardwood charcoal medicated with antiseptic, soothing oils. It regulates digestion, corrects intestinal gases, heals, soothes. With it you can save your young chicks, keep the youngsters growing and vigorous, and the old birds in perfect condition through all seasons.

The most important ingredient of Charc-Oil is Pheno-Septol, an antiseptic and germ destroyer. There are also such costly and aromatic oils as Thymol, Eucalyptol, Menthol, Peppermint, etc. Charc-Oil counteracts the filth and poisons that fowl constantly pick up in grain scattered in litter, dust, etc., and in drinking from puddles, etc. Charc-Oil is the "Safety First" ingredient in modern poultry feeding. Your flock needs it—right now.

LAKEWOOD LEGHORN FARM

Lakewood, New Jersey,
October 23, 1915.

The King Remedy Co.,
Rochester, N. Y.

Gentlemen:

I am writing you of the excellent success I have had this year in raising about 1,000 chicks. I can truthfully say that there has been less bowel trouble in the flock than ever before and I attribute this fact largely to the use of Charc-Oil which was fed regularly.

I have also used Charc-Oil for our moulting hens with very satisfactory results.

It is needless to add that I shall continue the use of Charc-Oil and recommend it to my customers.

Very Truly Yours,
LAKEWOOD LEGHORN FARM,
(Signed) C. S. Greene,
Proprietor.

Charc-Oil

both prevents and cures White Diarrhea, Indigestion, Constipation, etc. "Charc-Oil will make show birds out of culls." Nothing like it

For Birds of All Ages, Sizes and Conditions.

Packed in Three Grades:

XXX Grade (fine) granulated for young chicks and ducks.

XX Grade (medium) for half grown chicks.

X Grade (coarse) for adult fowls.

Our Free Service Bureau

is in charge of Prof. C. A. Rogers, former instructor and investigator in Poultry Husbandry at the New York State College of Agriculture. All questions pertaining to the use of Charc-Oil will be answered promptly and gladly. Write today. *Don't delay.*

For Chicks

Chicure
TRADE MARK
FOR YOUR CHICKS

Charc-Oil

For Growing Youngsters

is winning its way everywhere. It is our latest and best preparation, and there's nothing like it on the market. Clean, tasty and of a very pleasing odor. Poultrymen declare it to be the "missing link in chick raising," the "unequalled preparation for quick effective results," etc. So easy to use, too. No dosing or swabbing. All birds have a natural craving for it and they doctor themselves. It is sold on **sixty days' trial**—no risk. If after following the simple directions we give, the results do not prove our claims, we cancel the charge. Send for a pail or drum today.

KING REMEDY CO., 21 Elm St., Rochester, N.Y.

Ship me at once ____10 lb. Drums at $1.50 per Drum, ____25 lb. Drums at $2.50 per Drum, ____100 lb. Barrels at $8.00 per Barrel. Shipping charges prepaid. Guaranteed to tone up the layers—take them quickly through the moulting season and keep them free of all bowel troubles. To be paid for after 60 days' Free Trial, if Charc-Oil does as you claim.

OTHER GOOD THINGS ON OTHER PAGES

F. E. HARRISON'S "ROYAL RED" SINGLE COMB RHODE ISLAND REDS

First Young Pen Chicago 1912-13, Royal Reds Pen won first, Young Pen Coliseum, Chicago, for the past THREE YEARS.

Hold the World's record for consecutive wins in the World's Greatest Red Shows. A record of 19 FIRSTS at the four last Chicago Shows where I have exhibited, while my nearest competi or won but one first, is known to every Red breeder.

You should consider this Great Show Record before making the purchase of your This Season Show Birds or Breeders.

In the past three years I have won Special for Best Display in every show where I have competed. They are, namely: Colisum Chicago Show, three times; Greater Chicago Show; Wisconsin State Show, Detroit, Indianapolis, State Fair of Upper Michigan and Illinois State Fair. In addition to winning every special for best display at these shows, I **have Won a Total of 45 Firsts, while all competitors combined won but 6 firsts;** or in other words, I have won **45 Firsts** while my nearest competitor has won but one first. These facts have produced some knockers, but Royal Reds really have no close competitors.

CATALOG FOR THE ASKING

I raised the best Rhode Island Reds this year that I have ever owned.

F. E. HARRISON, Box 89, MENOMINEE, MICH.

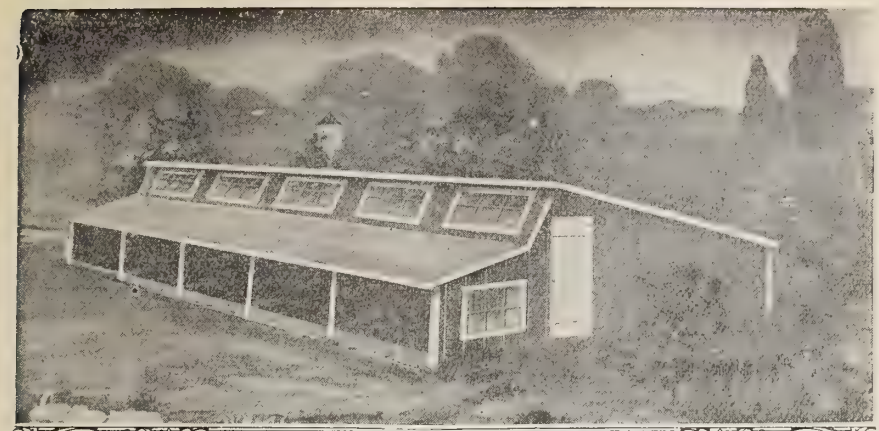
POULTRYMAN—MANAGER OR ASSISTant wishes position. I have had several years experience with poultry both showing and raising. Have a certificate from Ohio State short course. Harvey Jackson, Sidney, Ohio. (87)

A GOOD SOBER INDUSTRIOUS MAN, to have charge of a 12,000 egg capacity house. Plant in fine condition. Only White Pekin Ducks. 700 layers. A fine position for right man. Address 1896 E 70th Street, Cleveland, Ohio. (87)



BUILD IT YOURSELF FROM OUR SIMPLE BLUE PRINT PLANS

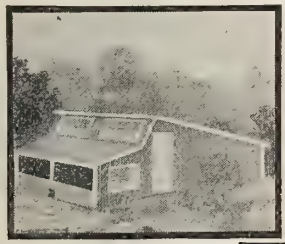
The "DIAPHRAGM"

Automatic Fresh-Air Suction Poultry House is one of the greatest discoveries ever made in the construction of poultry houses. Embodying all the best features of other houses, it also offers something entirely new in having a roosting compartment into which fresh air is forced automatically by the fowls themselves. No matter how many fowls are on the roosts the air will at all times be absolutely pure, thus preventing disease. It is a well known fact that nearly all the different diseases develop during the cold and damp nights, while the fowls are sitting still on the roosts, because sitting directly above the dung they breathe the germ-laden air over and over again, especially where there is a drop curtain in front of roosts. One of the best features which we claim for our house is that **double the number of fowls can be kept in a house equipped with a "DIAPHRAGM"** than are usually kept in a house of equal size, for the greater the number of fowls on the roost, the greater will be volume of fresh air rushing in and expelling the foul odors.

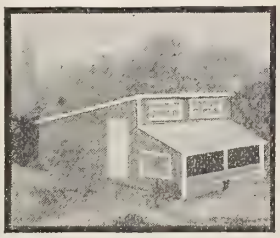
Designed by Louis A. Stahmer

Equip Your Old Poultry House with a "DIAPHRAGM" —It Costs But Litlle to Build

Complete specifications accompany each plan. All measurements are in plain figures, no technical architectural terms used. If you can handle hammer and saw you can build any one of these open air poultry houses from our plans.

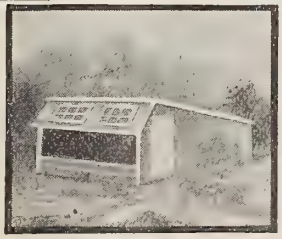


Dr. Woods' Open-Air House with Diaphragm Roosting Compartment



THE DIAPHRAGM HOUSE

Plan No. 2 gives complete specifications and meeasurements to build this 8 ft. by 16 ft. model No. 1 or 8 ft. by 12 ft. model No. 2 house. The most scientifically built poultry house.



DIAPHRAGM HOUSE
Model No. 2

WOODS' OPEN-AIR HOUSE

with diaphragm roosting compartments. Plan No. 3 gives complete information to build this most popular house. Thousands of them in use all over the country. Size: 8 ft. by 16 ft.

Anybody Can Build from Our Simple Blue Print Plans

PLAN No. 1 will enable you to build an 8' by 20' diaphragm house or one section of a continuous house. It also shows drawings for model No. 2. 8' by 13½' building.

PLAN No. 2 shows the drawings for an 8' by 16' diaphragm house or one section of a continuous house. It also shows drawing for an 8' by 12' model No. 2 house.

PLAN No. 3 gives complete information to build an 8' by 16' Woods' open air house with diaphragm roosting compartment or for one section of a continuous house.

All these houses have been endorsed by America's foremost fanciers and have given universal satisfaction under all conditions. These plans are for sale at our office and we will send any one of the above complete plans and specifications for $1.00 or with subscription to the

J. C. FISHEL & SON, WHITE WYANDOTTES, HOPE, IND.

White Wyandottes are having one of their best years. That their popularity is greater today than ever is evident. More are being shown, type is improved and they are making substantial records at all the egg laying contests, this with their early maturing qualities places them favorites as a popular variety. The above illustration shows a beauty winning pen of the famous J. C. Fishel & Son line that for years has been a factor in White Wyandotte success.

EVERYBODYS POULTRY MAGAZINE

Vol. XX. HANOVER, PA., DECEMBER 1915. No. 12

THE VALUE OF A $10.00 BREEDING MALE

A $10.00 Male Will Start You Right in Better Poultry Breeding.
A $10.00 Male Will Insure an Increased Egg Production.
A $10.00 Male Will Increase the Size and Weight of Your Entire Flock.
A $10.00 Male Will Insure Similarity and Improve Market Qualities With Best Prices
A $10.00 Male Will Establish Early Maturing Qualities.
A $10.00 Male Will Insure Profit and Success With Poultry.

NOTE—The following articles and those that will appear, are in reply to requests for articles dealing with "The Value Of A $10.00 Male," to the farmers and beginners wherein we wish to show the value and benefits derived from Standard breeding. We ask for further contributions of articles along these lines.—H. P. S.

(Prof. H. R. Lewis)

THE term 'utility' as applied to domestic poultry, is being grossly misused. At the present many amateur poultrymen, who keep but a few birds are being led to believe that any cockerel, regardless of his pedigree, regardless of his plumage pattern or regardless of his body shape; if he is called 'Utility,' he is satisfactory for use in the breeding pen. This gross misuse of the word must be corrected or serious injury to the standard bred poultry industry of America is bound to result. It is a well known fact. that the standard bred-bird which has for years been bred along definite lines, possesses characteristics which are fixed and which will reproduce themselves with unfailing certainty. There is, in other words, a greater reliability in breeding when standard requirements are used. Futhermore, such birds are just as capable of producing just as many eggs and of putting on as fine a quality of meat as are mongrels or cross-bred birds. One of the most marked results of some of our egg-laying contests has been the fact that birds which have made phenomenal records have later gone into the show room and received high recognition on account of their conformity to standard requirements. Columbian Queen. Lady Show You and numerous high producing individuals are examples of these types. A few isolated cases where birds of mixed breeding have made high records have been given undue prominence and exaggeration, whereas, many cases where standard bred birds have performed the same feat or even excelled it, have been allowed to go unnoticed.

The use of well bred cockerels which have been produced by reliable, careful breeding will do much to increase uniformity in resulting progeny. This is especially true with reference to shape, size and color of the eggs which are produced. Likewise, a uniform plumage pattern will be secured which will result in the birds not only being more valuable themselves, but will make an attractive and uniform flock which will be a credit to the breeder. Uniformity in reference to standard qualifications, especially shape and color pattern, are strong advertising factors as to his ability and show system in all his operations. The appearance of this uniform flock has a definite commercial value for it leaves a pleasing appearance with possible purchasers and makes sales. The poultryman himself is bound to take more interest in such a flock since it costs no more to feed and to care for a uniform flock of well bred birds. A greater egg production can be secured from standard bred egg breeds because they have been produced for generations with that definite aim in mind until their every effort is spent upon the reproductive process; likewise a better quality of meat can be secured from the standard bred meat breeds, the Light Brahmas being a typical example. In other words, there is a greater efficiency resulting from the keeping of pure bred birds, of careful breeding for any utility purpose, and utility means usefulness.

The poultryman who takes an interest in breeding to a standard and producing good birds has a big demand for hatching eggs, baby chicks, pullets, breeding cockerels and even for a large number of breeding birds in season: the demands being at very remunerative prices. The poultryman who is striving to sell market eggs and who does not take advantage of these additional sources of revenue by the breeding of standard bred birds is not developing his opportunities or getting out of his business everything that is in it. There is no better way that all poultrymen can more quickly or more surely develop their flocks along standard bred lines than by purchasing from reliable breeders, breeders of one or more standard bred cockerels, and by paying ten dollars and upwards for same. This cockerel should be mated to a few of the very best hens and thus gradually

increase the size and quality of the flock. There is no feat of egg or meat production which the standard bred bird of excellent type and color cannot perform, whereas, the mongrel or cross bred individual is capable of no higher production and more often falls far below the standard types when it comes to ultimate profit.

Ten dollars expended in a suitable breeding cockerel, if he is properly handled, is the surest way to make an attractive flock and increase revenue and resulting profit.

(I. K. Felch)

Rarely do we think of the times in 1848 and before, when the Asiatic Fowls were first introduced into Massachusetts and note their influence upon the farm flocks of the land in eighteen months. Their influence upon the average weight of the poultry in the market of Boston at that time was a full pound or 20 per cent. advance; and not only that, the influence upon the farm stock shows a like 20 percent, of increase in the egg production. These facts set the farmers to thinking and many a farmer became a Poultry Fancier, Exhibitors became known and poultry culture became an intelligent care, brought to the surface its influence and thoroughbred breeding became the live question and the heretofore false idea that Poultry raising was of minor importance was supplanted by the conviction that it was among the greatest of agricultural industries and as a result, we have seen this industry grow into a yearly product of over a billion and a quarter dollars.

It has not been the small mongrel stock of the farmer that has done this, but the influence of thoroughbred breeding among fowls.

Great as the early influence was in the earlier days, there is the same chance for the farmers today, who have not yet awoke to this thoroughbred influence in farm stock.

The early influence of cross-breeding set the early poultryman to general cross-breeding because of the increased production of eggs received from new blood, introduced to their flocks, but they soon found that thorough breeding went one better and just as much improvement on the halfbreed resulted as in the early days, the crosses had demonstrated their superior merit over the mongrel product of the earlier age.

The pride in owning the best begets a greater investigation into the subject and the thoroughbred to-day holds first position. There is not a breed, that with intelligent care, will not pay a profit above care and keep. Today it is fair to say that the average production of all standard breeds taken together will produce twelve and a half dozen eggs, per capita per year, while individual speciments have produced from this up to the World's Record of 313 eggs in 333 days; this increase however has been made by thoroughbred culture in fowls. There are mighty few who can keep a flock of chickens who cannot afford to buy two females at $5.00 each and a male for $10.00 that entitles them to produce one hundred chichen for the first season. This is only fifteen cents of additional cost, even if the original trio be eaten in the fall.

Fanciers know that the male is half of a breeding pen, even if the flock be two or twenty, even if the latter number can be indulged in with Leghorns.

While good results are possible with a $15.00 trio from well bred stock, pride in the possession of owning the best has led men to go even from $5.00 to the world's record of $7500.00 for five birds. All this has been achieved through care and intelligence in breeders and with thoroughbred stock.

No one, not even the isolated farmer can longer ignore the influence of thoroughbred stock on his farm, be it horses, cattle, swine or poultry. Success cannot be hid under a bushel.

If you breed nice stock it will be known and a corresponding demand will come for it and a price in keeping with the merit you show will bring its reward in dollars and cents.

Watch out for merit, learn to score by Standard demands. Breed from specimens which score from 92 to 9 points, and learn to select the shape that proves the most prolific and standard in color.

In nearly all cases standard excellence will take you to the most profitable type. Show your flocks and convert your neighbors into fanciers and thinkers upon this, one of the best money earners of their farms.

(U. R. Fishel

It is very hard to estimate the value of a ten dollar breeding male bird. The returns from an investment of ten dollars for a breeding male bird will be forthcoming many years after the bird has died from old age, for the blood lines this ten dollar male left in the flock of fowls can be noticed and results obtained from years.

In poultry, as in no other live stock, is the male so important and is used for so many females. It is true that the life of a cock bird is short but stop and consider the results you have obtained from this interest.

For ten dollars you should purchase a good individual male bird of most all or of any breed and variety. Naturally you will get better value in solid colored birds than in parti-colored ones. You should receive for your ten dollars, not only a good individual bird, but a bird with the breeding and blood lines behind him, so as to make the investment worth while, and make the bird of some value to the breeder. If the poultry breeders would stop and consider the matter in a business like way before they purchase a male bird, I am sure they would all profit by buying a ten dollar breeding male. Try it for one year and see the splendid result you will obtain. I am sure of the gain that a ten dollar male bird will do for you. It is a sure fact that you will invest twenty dollars in the next male bird.

(T. F. McGrew)

Few people seem to understand the true value of well selected Standard bred stock, especially when it is selected for special need of those who keep it.

It would likely be a startling fact to be told that there has never yet in all the world been a prize won in egg laying competition by fowls of any kind other than Standard bred fowls. There has never been a prize won in the market poultry classes by others than specimens of the Standard bred varieties except an occasional cross bred specimen produced from crossing two varieties of Standard bred fowls. The prizes for eggs are always won with eggs laid by some one of the Standard bred varieties. In the present contest at Storrs, there is a White Wyandotte hen entered by a woman who lives on a farm; this hen is laying wonderfully well while common farm hens are doing but little at egg production.

The farming community and people in general are being well educated by the agricultural press in the value of better cows. It would be a great help to the farming community if the same papers would take up the cry of well selected Standard bred fowls as the best for the farmer. There comes to Allentown Fair each year a farmer who has bred Plymouth Rock for twenty year; he brings fresh laid eggs from these fowls to the fair and enters them in competition in the market egg classes. For two years he has won first prize for Plymouth Rock eggs, first prize for best brown shelled eggs and this year he won special prize in the classes for the best dozen of brown shelled egg produced by American fowls; his hens lay many eggs of large size with smooth shells, the most attractive kind for market. It costs him no more to feed and care for his Standard bred hens than it costs his neighbors to feed and care for the mongrel kinds from which they get no eggs during the winter months.

(Continued on Page 649)

THE MANLY MAN

The world has room for the manly man with the spirit of manly cheer;
The world delights in the man who smiles when his eyes keep back the tear;
It loves the man who, when things go wrong, can takes his place and stand
With his face to the fight and his eyes to the light, and toil with a willing hand.

The manly man is the country's need, and the moment's need, forsooth,
With a heart that beats to the pulsing tread of allied leagues of truth;
The world is his, and it waits for him and it leaps to hear the ring
Of the blows he strikes and the wheels he turns and the hammers he dares to swing;
It likes the forward look in his face, the poise of his noble head,
And the onward lunge of his tireless will and the sweep of his dauntless tread.

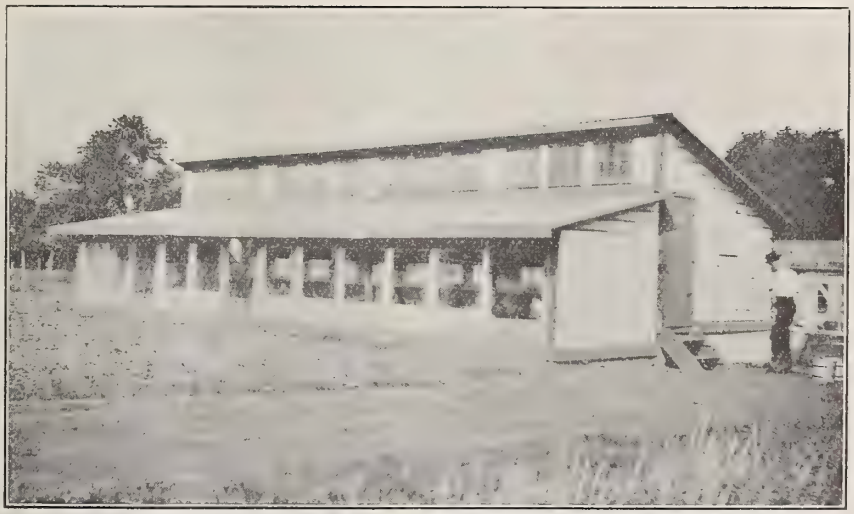
Hurrah for the manly man who comes with sunlight on his face,
And the strength to do and the will to dare and the courage to find his place!
The world delights in the manly man, and the weak and evil flee
When the manly man goes forth to hold his own on land or sea!

THE BREEDING PEN FOR THE EGG FARMER

The Most Important Step in The Increasing of The Egg Yield in any Poultry Flock is The Selection and Mating of The Breeders—Willard C. Thompson

AS the cold, snappy days of December come upon us we who are interested in the poultry flocks are hoping to see the egg production go up and be kept up through the winter days. There are two very good reasons why every poultry raiser and particularly "egg farmers" want to possess flocks that will lay eggs during December and the other winter days. In the first place the market price of eggs is usually high during this time and fresh eggs will command prices that will mean greater profits to the producers. It is a season when the great majority of flocks are resting, thus affording a great opportunity for those flocks that have been so produced and handled as to be winter layers. The spring is the natural laying season for fowls and birds of all kinds, and therefore it becomes necessary to furnish special conditions in order to get winter laid eggs. In the second place the birds that make good records toward filling the egg baskets during the cold, wintry days are usually the highest producers during the rest of the year. Thus the winter production is a fairly accurate method of measuring the annual production of a flock of birds.

Producing winter eggs and particularly December and January eggs is not an easy problem for the poultry keeper to solve. It is the goal toward which the great majority of egg farmers, and everyone is an egg farmer that is keeping chickens for eggs primarily whether it be on a general farm or on a specialized egg plant, are striving. The task is not easy because its accomplishment is not the result of merely feeding properly or housing properly, but is the result of the combination of several very important factors, including the breeding of the birds themselves, the feeding of balanced rations, the careful housing, and the systematic care and management of the flocks. All play a part and no one alone can do it. This is the reason that many who have tried to produce winter eggs have failed, they have not reckoned on all the factors that work together to force egg production at an unnatural season of the year. An attempt must be made on the part of the poultry raiser to imitate spring conditions is so far as it is possible. All the essential factors cannot be furnished at once, but consideration can be given to them and a systematic effort can be planned which will soon bring results.



A large Flock of 200 Breeders Can be Housed Together With Splendid Results.

The Place of Breeding in Developing Winter Layers

Today we find scattered over the country and particularly near the great centers of marketing and distribution large farms that are devoting the greater part of their efforts, at least, to egg production, and, because of the reasons already mentioned, to winter egg production. In the gradual building up of this agricultural industry the relative importance of the various influencing factors to egg production has been studied and investigated as a matter of good business. It is generally conceded that the quality of the birds themselves is the fundamental factor in production. If one does not have stock that is capable, under correct conditions of feeding and housing, of high egg production further effort is wasted. Attention must come first of all to the make-up of the flocks which are expected to perform the work.

Fortunately the improvement of the quality of the laying flocks is not a difficult task, nor even a very expensive one, especially when considered from the standpoint of future results. It is much a matter of planning carefully and using good, tried stock with which to build up the whole flocks. December and January are the months in which to start the improvement of your poultry flocks, or, if the start has been made, to keep the good work going and growing. It means the making up of breeding pens from which the eggs for another spring's hatching will be selected. It means stopping relying upon the laying flocks for the necessary hatching eggs, and hatching eggs from all sorts of individuals in the laying flocks. It means the selection of hatching eggs from good birds. One cannot get away from the old saying that "like produces like." It stands to reason that eggs from carefully selected birds will hatch chicks that will be better than those from eggs from a general flock.

It is too often thought or imagined that keeping a breeding pen entails too much expense and labor for the average poultry keeper. This is not the case, or need not be. Maintaining a breeding pen simply means that the best birds in the flock are selected out and placed by themselves during the late winter months and spring months, and mated with male birds that are not only themselves good individuals but from good lines of stock. There are several good, practical arguments in favor of the establishment of a breeding pen wherever poultry is being kept for profit, and every argument is itself a good reason why such a plan should be adopted.

1st. It does not necessitate the purchase or keeping of so many male birds. Only enought should be kept on the place to mate the birds in the breeding pens. The regular laying pens should not be mated at any time of the year with male birds. Supplying the entire laying flocks is an unnecessary expense and cuts down on the quality of the eggs produced for the market or table. Male birds in a laying pen are unnecessary to egg production and often decrease it, in fact.

2nd. It furnishes hatching eggs from the best birds on the place, eggs that can be relied upon and eggs that are from known stock. This means that the chicks another year will be improved in quality and more uniform, coming from only the selected birds of the flock. Experience has taught the great and the small egg producers that the value of this argument cannot be overestimated.

3rd. It produces chicks that another year will form the basis of the laying flock. Each year the laying flocks will receive pullets from the always improving breeding pens, and thus the end is gradually accomplished.

4th. It permits the purchase of better cockerels, because of the reduced number required. Money put into good breeding males is not misspent, for their influence on the chicks hatched is very great

5th. It does not require extra labor enough to mention.
6th. It necessitates only a pen set aside for the breeders.

What Are Good Breeders?

The first practical question that comes up after making up one's mind to try the breeding pen method of flock improvement is as to what birds shall be chosen for this pen. How shall the breeding pen be made up? What

A Colony Breeding House for a Dozen Choice Birds is a Valuable Asset to the Poultryman's House Equipment. (House of E. C. Young Type.)

kind of females shall be selected, and what kind of male birds shall be used in order to secure the results desired?

In selecting the females for the breeding pens the the purpose for which they are to be used should ever be borne in mind. Go through the laying flocks and select enough of the birds that fulfill as many of the desired requirements as possible to make up the breeding pens to the size planned. In doing this bear these factors in mind:

1st. Select the number of females that will probably produce the approximate number of hatching eggs that you desire to use in the spring. As a general rule for the average poultry raiser one female should be counted upon for about fifty eggs during the four months from January through April. Some will do much better, and some will do much worse, but I believe that this is a safe average. If one is planning on all early hatching the number of breeders will have to be larger than as if eggs were to be saved during the four months. After the flocks have been built up to higher egg production this average number of eggs to be expected from each female in the breeding pen can be safely increased. In some cases where small breeding pens are used the object is only to obtain better cockerels for another year's work. The object of the mating up of the breeding pens will influence the number of females to be selected.

2nd. Select the females that are of good breed type. No birds that are not pure bred should ever be used in breeding pens. If poultrymen are going to develop high producing flocks they must recognize the great value of pure bred birds, birds that have been produced through years of careful selection and breeding toward a definite standard. The poultry raiser should be familiar with the ideal bird of the breed which he is keeping. If it be Leghorn, he should know the shape of body, size and carriage that has been adopted as a standard for that breed, and just so with every breed. Having this mental picture of the ideal bird, go into the laying flocks and select the breeders from those birds that show at least something of the desired size and shape.

3rd. Select the strongest, healthiest and most vigorous appearing females for breeders. They should transmit to the next generation of chicks sturdy, healthy constitutions, for these are absolutely essential to high egg production. Delicate, small, poorly developed hens never are capable of using the large amounts of food necessary to high egg production. Healthy, strong birds have a natural resistance to disease that is an important foctor in continued egg production. Beware of the inactive hen that does not work about in the litter hunting for grain. Put the busy ones in the breeding pens.

4th. Select only well matured hens for breeders. Never put pullets in the breeding pens unless it is impossible to obtain good matured hens. The yearlings and two-year-olds make the best breeders for two reasons. In the first place they have gone through at least one year of production and thus it has been possible to watch their first year's production, this giving a suggestion as to the producing power of the birds. In the second place yearlings and older birds have attained their full growth, Pullets often do not produce eggs that are as strong and vigorous for hatching purposes as older birds. The best and surest way is to trap-nest during the first year production, thus being able at once to find the birds that have made good records.

5th. Select the birds with good records. The value of the trap-nests has just been alluded to. If they are used, the exact egg record of the birds can be examined. Put into the breeding pen those birds that made a good pullet year and possibly second year egg record. Their chicks will be worth while. It may mean the cutting down in the number of eggs that they will produce during the winter, for do not force breeders for heavy winter egg production, but it also means that the chicks another year will inherit the egg producing ability.

6th. Select the active birds. Watch the laying pens for several days before going in to select the breeders. The best birds in the pen will be the first to get off the perches in the morning and last to get onto them at night. The drones sleep late and retire early. The best layers are usually the singers, with red, large combs, bright eye, and well developed bodies, particularly in the rear parts where the digestive and reproductive organs are located. These are all body points that need consideration, and they will usually be found to accompany good pedigree records.

7th. Don't be afraid to pick out the best birds in the pens. It may look like a sacrifice, but it is only temporary Next year's pullets will more than balance up the very present decrease in winter egg production.

After the hens have been selected for the breeding pens attention must be given to the selection of the

Each Section of a Long Laying House Can be Used for Breeding Pens.

male birds that are to be mated with them. They, too, should have certain characteristics:

1st. Select cockerels, that are young male birds. Old male birds that have proven to be valuable should be used, of course, but cockerels will mate well with old hens in securing the desired results. They have full, active vigor and strength which is essential

2nd. Select cockerels from high producing hens. The male side of the mating is the one which is nowadays believed to transmit to the pullets the characteristic for fecundity, or high egg production It is therefore extremely important that the production of the cockerel's mother should be know. This requires trap-nesting, but it is well worth while. It may be necessary to buy from

off the place such cockerels After the start has been made there is no reason why every egg farmer should not have such cockerels on his own plant.

3rd. Select cockerels that are of good breed type. The same can be said of the males as was said of the females in this regard.

4th. Select cockerels that are strong, vigorous and healthy. They will help to transmit such characteristics to the new generation of chicks.

5th. Select one male bird for every ten or twelve females at least in order to insure fertility of eggs. One male to every six or eight would be better, but at first this may be too expensive.

All this selection of both males and females for the breeding pens will not require much time? Make up your minds what types of birds you want and then go into the pens and look for them.

When Should The Pens Be Made Up?

As a general rule the breeding pens should be made up by the first of January, especially if early hatching is to be practiced The main reason for this, however, lies in the fact that the .breeders should not be forced for heavy winter egg production, if strong, vigorous eggs are desired for hatching purposes later on. If they remain in the regular laying pens they will get the rather forcing egg producing rations that are advisable for the laying flocks Eggs can be saved for hatching purposes after the pens have been mated for two weeks, as the eggs from then on will be as fertile as they ever will be very probably. The fowls will be somewhat up-set after being transferred to the new pens and so it is well to move them in plenty of time to enable them to become settled again by the time that it is necessary to begin saving hatching eggs.

What Kinds Of Pens Are Necessary?

It does not make a great deal of difference where the breeders are kept as long as they are confined by themselves and are surrounded with warm, dry, sanitary, sunny quarters. It may be in the long laying house, one of more sections of which have been set aside for such purposes. It may be advisable as the plant increases and as the importance of special matings is realized to construct separate colony houses, a typical example of which is shown in Fig. 2, a breeding house used at the N. J. State Agricultural Experiment Station, New Brunswick N. J. This house can be used during the summer for growing stock and transferred into use as a breeding house during the winter, thus economizing in buildings. The pen in which breeders are kept should be kept in perfect condition as it is particularly essential that their health and vigor should be maintained.

How Should Breeders Be Managed?

Breeding birds do not require care very different from the laying flocks. It is not necessary to include quite as much meat scrap in their mash as it is in the mash for layers. In general do not try to force the breeders for high winter egg production, as has been pointed out earlier in this article. Keep them in good condition, not too fat. Otherwise care for them in the same way and manner in which the laying flocks are managed and cared for. During the spring months they will naturally pick up in egg production, and their eggs will be stronger if they have not been forced during the winter.

In conclusion let us sum up the breeding pen proposition by saying that

1. The Best Hens On The Place Are None Too Good To Put Into It.

2. Male Birds From Good Producers Should Be Their Mates.

3. Like Produces Like, And Better Birds Produce Better Birds.

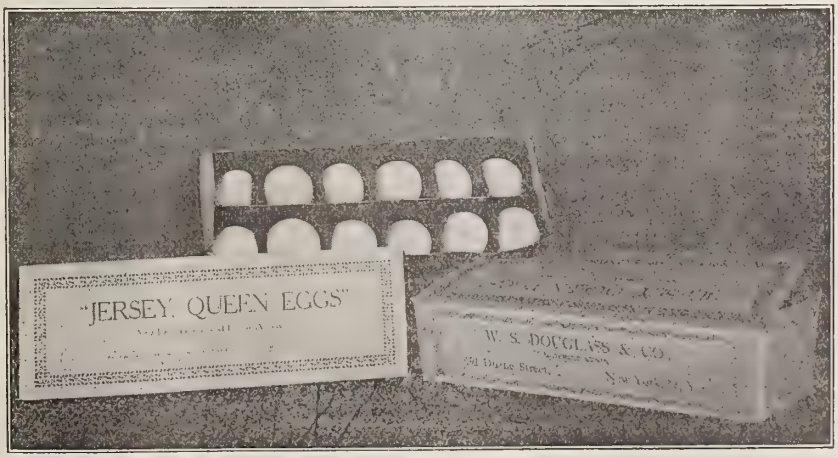
4. Make The Breeding Pen A Permanent Part Of The Farm Management.

5. Get acquainted With The Trap Nest And Its Advantages.

INCREASING THE QUALITY OF MARKET EGGS

It Is The Problem and Duty of The Poultryman To Produce Clean, Fresh Eggs and It Is The Duty Of The Distributing Agents To Deliver Them To The Consumer In The Best Possible Condition.—Prof. H. R. Lewis

THE quality of egg shipments which reach the Eastern consumer from near by and distant points is always a matter of considerable concern. What are the causes, and who is responsible for the losses due to this low quality. This loss necessitates constant adjustment, resulting in dissatisfaction to both shipper and receiver The causes are many, but they can be traced in the majority of cases to faulty methods either at the point of production or en-route. The producer must especially appreciate all of the causes which go to lower the quality of market eggs and systematically attempt to avoid them if a uniform high quality is to be maintained. The poultry farmer producing eggs of considerable numbers, either for wholesale or retail trade, pledges himself to produce eggs of good quality and also to grade and pack them so that they will reach the consumer, if properly handled during shipment, in a neat, fresh, clean condition.



Common types of 2x6 cartons. These are durable and handy; their use admits of grading and guaranteeing by the producer.

Factors Which The Producer Must Control

There are certain definite factors in handling and management which the producer must practice in order to maintain this quality. The First Duty of the producer is to produce nothing but clean pure eggs. Unsanitary and unclean methods in production is bound to taint the eggs. This poor quality may be due in part to mould, due to dampness, or may be caused by the presence of an excess amount of filth, or by general unsanitary conditions. Tainted eggs of this type are very frequently caused by poultry houses which are insufficiently lighted and poorly ventilated, and in which dirt and an unnecessary amount of filth are allowed to accumulate. In such houses the droppings are generally allowed to remain for a long period to contaminate the atmosphere and dirty the feet of the birds. The nests are very frequently allowed to become dirty and filthy. Eggs deposited in dirty nests cannot help but take up some disagreeable odors which are sure to be present. Such eggs will become soiled and tainted, due to the direct contact with the moist droppings. Clean nests and clean nesting material which is frequently changed is the best preventive against unsanitary nesting conditions. There is nothing better than

an inch or two of clean planer shavings placed in the nest at least every month. An insufficient number of nests will often result in many eggs being laid on the floor, or in dark dirty corners where they are sure to be soiled and frequently cracked and broken. At least one nest should be allowed to every four hens, and in the spring of the year when egg production is high, one nest to three hens is none too many. Infrequent collection of the eggs is a very important cause of this poor quality. Where eggs are allowed to remain in the nest for three or four days, or where they are allowed to accumulate in stolen nests they become soiled and unsanitary, and during seasons when broody hens are prevalent, developed germs will be the common rule. A safe rule is to see that the eggs are collected at least once a day, late in the afternoon being the best time. When a special quality of egg is being produced for which an increased price is received, it is well to make more frequent collections. The first duty of the egg producer is to be certain that clean eggs are being produced, due to the maintenance of absolute sanitary conditions in and about the nests. The poultry house which is flooded with sun light and which is well ventilated and kept perfectly clean by systematic methods is the only one suitable in which to produce clean eggs. The result is not only clean eggs, but a healthy flock capable of increased production.

The Second Duty On The Part Of The Producer Is To Take Proper Care Of The Litter

The litter should be deep, coarse and dry, thus tending to keep the birds' feet clean, and hence the nesting material and nests clean. Deep coarse litter can only be maintained by frequent changing which necessitates cleanliness. Clean new litter does away with the possibility from odors due to an excessive amount of accumulated droppings. As soon as the ground gets muddy and wet in the fall the bird should be confined to the house, thus keeping out dirt and mud. This is especially true on heavy land which is of a clay nature, and which allows of much soil clinging to the birds' feet, where it is easily carried into the house.

Fancy eggs put up in cartons and guaranteed. A method of co-operative marketing which is proving very beneficial to New Jersey Poultrymen.

The Third Duty Of The Producer Is To Prevent Germ Development.

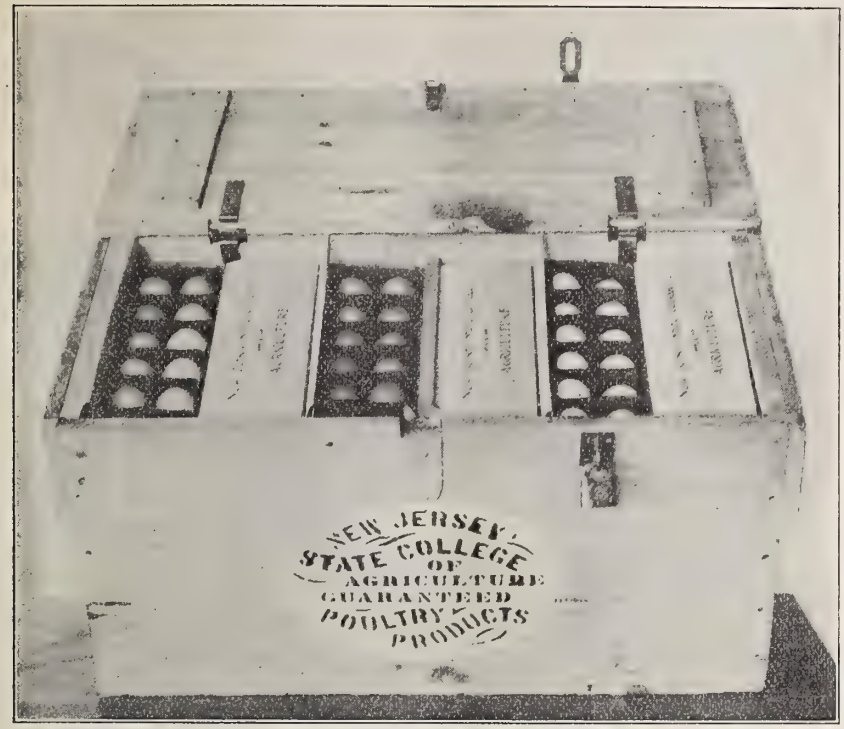
The loss from so-called spots in eggs is common and if quality is to be maintained and the customers not only secured but held, care must be used that no eggs containing spots are present in any shipment. Federal laws have been passed governing the handling of food stuffs which compel the destruction of eggs containing developed germs. These spots are due to a partially incubated embryo which shows as a dark distinct spot with several radiating lines when the egg is held before the candle. such spots are especially common in the spring of the year when the birds are mated for breeding and when fertile eggs are being produced. Their presence is due primarily to improper attention in collecting eggs as well as by allowing the broody hens to remain for a number of days on the nests. They should be frequently removed from the nest and confined in isolation pens, not only to improve the quality of the eggs, but to shorten the period of broodiness and get them into laying condition more quickly. Eggs should never be taken from stolen nests and allowed to get in with the market eggs. All such eggs, after candling, may be consumed at home. The poultryman never knows how long such eggs have been laid or how long the hen has been setting on them. Eggs of this kind will spoil very quickly in transit and will ruin the future business with that particular customer. Frequently, eggs which have been taken from the incubator as containing dead germs or being infertile are allowed to get into the egg crate. The finding of these by the consumer not only cause immediate losses in returns, but ruins the reputation of the shipper. Eggs should never be allowed to remain for any considerable period of time exposed to the direct rays of the sun. If they happen to be fertile the intense heat will cause the germ to develop and they will appear as "spots." It takes a temperature of but 80 degrees to start the development of the embryo. All market eggs should be kept in a temperature of about 50 degrees if possible. The type of blood spots above described can only occur in eggs which have been fertilized, hence there is no better rule which can be followed for improving the quality of market eggs than to keep the male birds from the flock at all times excepting during the hatching season, and at all other times only infertile eggs should be produced.

The Value Of Infertile Eggs For Market

The Federal Department of Agriculture have made careful studies of the value of infertile eggs for eating purposes and have noted many advantages of which the following are a few. Infertile eggs do not or never can be hatched. In other words, they contain no fertile germ which may on the application of heat, develop into a chick. Hence there is no danger of infertile eggs ever developing a blood spot, due to embryo development. Due to the absence of a fertile germ, they withstand heat much better than the fertile egg. During shipments, especially in the winter, it is often that the crates are exposed to considerable heat when they are placed near the steam pipes in the Express car or office, and again they are allowed to remain on the platform for a considerable time on cold days and exposed to a low temperature. In the case of fertile eggs the intense heat would cause the embryo to develop beyond its normal resting stage, while the following exposure to cold would cause the death of the developing embryo which would result in a blood spot. An infertile egg will stand shipment remarkably well under peculiar adverse conditions which must be expected in a greater or lesser degree where large quantities of eggs are handled at all seasons of the year and over great distances. Again, infertile eggs are much easier to preserve. It is a common practice to put thousands of dozens of eggs in cold storage when the price is low and the supply abundant for use in the winter months when the supply is limited and the price high. Infertile eggs stand this storage and come out much better than the fertile eggs. It is often the case that private families desire to preserve a limited number of eggs for their own use in the winter, and they are usually put down in water glass or silicate of soda. The infertile eggs are found to be far superior for home preservation to the fertile eggs. The infertile eggs are much slower to decay. There is an old saying that "Where there is no life there can be no death" and with the infertile egg there has been no union male and female germ cells, hence there is no possibility of such eggs becoming decayed or rotten except they are handled under very adverse conditions. Infertile eggs are much easier to produce and cost less than fertile egg, due to the fact that no male birds are required in the pen, and it is a fact that just as many infertile eggs are produced from a given pen as there would have been if a male bird had been present. With an appreciation of these important advantages which the infertile egg possess over the fertile egg, it will be readily appreciated that there is probably nothing which the poultryman can do which would so surely improve the quality of the eggs produced for table use more than the systematic effort to produce only infertile eggs for market.

The Fourth Duty Of The Producer Is To Eliminate In So Far As Possible The Prevalence Of Blood Clots In Table Eggs

Another type of dark spot which is found in eggs is called blood clots. These clots are due to the presence of blood in the albumen section of the egg. The clots are usually formed by a rupture or slight injury to the oviduct during the time when the egg is being formed. The blood clot may be present in either a fertile or infertile egg, and the difference between the blood clot and the developing embryo should be clearly appreciated by the poultry keeper as well as the housewife. The presence of the blood clot in a normal egg cannot be determined without candling, hence where eggs are sold to fancy trade at high prices, it is the safest to candle the entire output. All eggs sold through commission houses in large Eastern centers of consumption are candled immediately upon receipt from the producer after which they are graded and sold as graded eggs, free from blood clots. What is of still greater significance to the consumer is the fact that the blood clots cannot be entirely eliminated by the poultryman as they are common in strictly fresh, new laid eggs. They are especially common in the fall of the year when pullets begin laying, as well as in the spring of the year when the birds are laying very heavily. A study of the prevalence and causes of blood clots seems to show that the condition exists in certain individuals in a flock, and that a number of eggs showing clots are laid by a few distinct individuals by systematic trap nesting and candling the eggs for a short time. The poultryman, if catering to a retail trade, should try to educate the public as to the cause of blood clots, and how to distinguish the difference between the developing embryo and the blood clot. This can be done by the use of a printed circular or card which is placed in the carton before sealing. Such a card should state the fact that the eggs are strictly fresh and carefully handled and if blood clots are found, the cause should be stated, and the fact that they are not injurious or of poor quality should be clearly shown. The fact should also be stated that the blood clot can be removed and the remaining portion of the egg consumed for food.



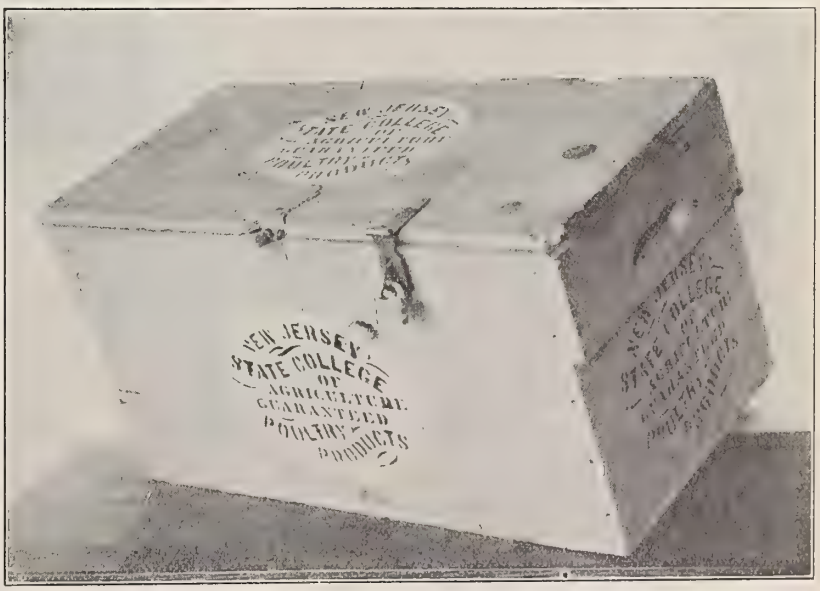
Cases open showing one-half white and one-half brown, all packed in sealed cartons. Same case closed ready for shipment.

The Fifth Duty Of The Producer Should Be To Ship Only Eggs Which Are Uniform As To Size.

Small eggs, even though not of inferior quality, should not be shipped to market. A uniform price is only received for eggs which are uniform in size. Small eggs in a normal shipment are a common cause of low returns for the entire lot. These of course, are especially prevalent in the fall when pullets are just starting to lay. Eggs produced at this time should be especially culled, and the small ones shipped in packages labeled "small or pullet eggs." The normal size eggs should weigh about 24 ounces to the dozen, or a case of thirty dozen should weigh from 52 to 55 pounds. Shipments which fall materially below this weight will be sold at wholesale for correspondingly much lower price. Uniformity in the appearance of shipments, whether in dozen cartons or in egg case lots, is of vital importance. A few small eggs or a few large eggs spoil the appearance of the entire lot. The large eggs make the normal eggs look smaller and hence dissatisfy the customer. Exceptionally large eggs should be consumed at home. Whereas uniformity in is an important factor if the highest prices are to be received.

The Sixth Duty of the Producer is To Insure Uniformity in the Color of Eggs Shipped in the Same Package.

It is a peculiar fact that certain large egg consuming centers demand and pay a premium for eggs of a certain color. For instance, New York markets as well as most Eastern centers discriminate in favor of the white shelled egg. New York will pay a premium of from 3 to 10 cents for this color egg over the brown shell. Whereas Boston will demand and pay a premium for the brown shelled eggs. Philadelphia, on the other hand, is a non-discriminating market. It is a fact, however, that all markets pay a premium for eggs which are of uniform color, that is, a case containing both browns and whites would be worth more on the market if the browns and whites were separated and the case conspicuously labeled as containing 15 dozen white shelled eggs and 15 dozen brown shelled eggs. For this reason, if the greatest selling prices are to be received, the egg farmer should keep one breed,



High Quality Eggs should be packed in special cases, properly graded and conspicuously labelel. The guarantee will serve as a trade mark to boom the business.

producing an egg of one color, and that color being determined by the demands of the market to which he must ship the greater amount of his products. Uniformity in color can only be secured by keeping standard bred birds of a well established breed.

Careless Packing Frequently Results In Poor Quality

A large loss in the egg trade which is due to careless packing by the farmer is often an unappreciated fact. There are a few essential principles which must apply to the packing of eggs. First, all extremely large and mis-shaped eggs should be consumed at home, for the fillers are made of such a size as to accommodate normal eggs only. When large eggs are packed they are often broken, the contents leaking to the lower layers and thus not only causing total loss of the eggs that were broken, but a certain decrease in quality of many eggs in the same case. Cracked eggs should never be packed for shipment. If they are not leaking when starting on their journey, the chances are that the contents will have leaked out before they reach their destination, which will injure many eggs in the case. Before packing eggs in the case, especially if second hand crates are being used, the cases should be gone over and renailed, being sure that the entire case is secure and strong. When packing eggs, only perfect fillers should be used. Soiled or broken fillers should be discarded. Egg cases known as seconds can be purchased for from 5 to 7 cents each, and it will usually take 11 cases to make good ones. Some will need a new cover others will need new sides, and all will probably need some new fillers.

When packing the eggs special care must be used to see that plenty of material is put at the top and bottom to serve as a cushion to prevent unnecessary jarring. Excelsior is the best material for packing. It should be placed evenly over the bottom about one inch thick before the fillers are placed in the case. After all layers are filled, the top row of eggs should be covered with heavy newspaper and then a layer of excelsior placed over all. In nailing on the cover it should be practiced to leave the center raised a little, nailing it on both ends. If enough excelsior or packing material has been placed in the case, it will cause the center to bulge slightly forming a cushion which will check or retard any quick or serious jars, thus eliminating a certain possibility of breakage. Quality is measured not only by the sanitary condition surrounding production, but it is measured finally at the point of purchase by the agent, and is determined by the appearance of the eggs and the package. If the eggs are all clean of good size, of uniform color and free from necessary breakage and cracked eggs, a better price will go to the producer and more satisfaction to the consumer.

"Held eggs" are a common cause of decrease in quality. "Held eggs" is a trade term which is frequently applied to all eggs which have been at the point of production for several weeks before being shipped to market. The producer holds the eggs from day to day as the price is rising, thinking that he will secure more profits by holding them longer. Held eggs even if kept in a cool room are poor in quality. Evaporation will take place, the air cell grows larger each day, and when the eggs are candled, the fact that they have been held, and are not strictly fresh, is sure to place them in a class which brings lower returns. Not only can these be detected by the candler, but when the eggs are cooked and tasted by the consumer, that fresh, crisp taste of the new laid egg is not present, so that holding eggs during a rising market, for any length of time, with the idea of increasing revenue, is a false practice, and one which makes a bad reputation for the shipper. Market eggs should be shipped not less than once a week and better twice a week. It at certain seasons full cases are not being produced, it is possible to ship half cases containing 15 dozen eggs on the regular shipping days.

Quality Is Frequently Impaired By Careless Method Of Handling During Shipment

A great many of the eggs shipped to New York and other Eastern cities for eating purposes are shipped from the Central states bordering the Mississippi River. These eggs must be transported to the Eastern markets at considerable sacrifice of quality. Nearby producer of eggs in the Eastern States have many advantages over the Western producer in this respect, and should take advantage of it by insuring quality before the eggs leave the farm. The distributor is an important factor in maintaining quality, and it is his duty to transport eggs from the producer to the ultimate consumer in the least possible time and with the least possible loss in quality, and with as small an expense as is consistent with efficiency. It is the poultryman's duty to be sure that the eggs leaving the farm are in such shape that the distributor can do this transporting to the best advantage. The distributor must avoid any handling which will allow quality to be impaired, due to the case being dropped or violent handling. Breakage due to heavy weights being placed on the egg case, causing them to become partially crushed, is not uncommon. Placing of egg cases near steampipes in heated rooms is bound to lower quality, and on the other hand leaving them exposed on trucks on cold winter days, for a long period of time, allowing freezing, is a negligent factor. The leaving of eggs on trucks on the

1st Prize Cockerel (White Orpingtons) Madison Square Garden, February 1915. Bred, owned & exhibited by Aldrich Poultry Farm, 7032 N. High st., Columbus, Ohio, a bird of marvelous beauty showing all the characteristics which have made World famous this line.

platform during the mid summer, exposed to the direct rays of the sun is unpardonable, for if the eggs are fertile, germ development is sure to take place. Again losses may be due to delay in delivery. It may be caused in some cases by carelessness on the part of the distributors, or as in some cases, by lack of care in addressing the package on the part of the producer. The address should be marked on a card, tacked on one end of the case, not on the top or sides.

Conclusion

The retail trade is probably the more satisfactory from the standpoint of maintaining quality. The producer is the only man concerned, and it is up to him to produce quality and deliver quality. The wholesale trade, however, requires the handling of the product by a number of different agents, the producers, the distributor, the wholesale jobber and the retail store; all these must handle the eggs and each must take his profit. It is the problem of the producer to be sure that his eggs are clean, fresh and properly packed when leaving the farm, if he is to get the greatest returns and insures the best quality to the consumer. The most direct selling which can be followed will be an advantage, not only in quality, but price as well.

"UTILITY CRAZE"—PART II.

Its Relation To Market Poultry and Egg Types—Charles D. Cleveland

IN last month's article an attempt was made to point out the real meaning of the word "Utility" as applied in general.

The public was warned not to allow the word "Utility" to be expanded so as to cover more than originally intended. Beginners were cautioned against accepting a construction of this much used word which would lead them into the belief that Standard Bred Poultry could not be Utility Poultry. The novice was advised to consult good authority before he concluded that "Utility" meant everything, and above all that "Utility" had been used by a multitude of advertisers to cover a multitude of sins. An endeavor was made to point out that those who had inferior stock were very fond of using the word "Utility" to disguise the poor qualities of their stock from both the Market and Exhibition standpoints and that these men were employing the term as a catch-all or mystic symbol, both to deceive the public and to lend a value to their stock which in fact it did not really possess.

The purpose of this chapter is to briefly discuss the real relation between the word "Utility" and (a) Market Poultry and (b) Egg Types or flocks bred solely for egg production.

There can be no question but that market or beef types have a distinct and unique value. They are composed either of Standard Bred Poultry, specialized along certain lines or crosses made for the express purpose of producing carcasses superior in quality and amount of flesh. The public is gradually beginning to fully realize the importance of poultry as food. It is waking up to the knowledge that poultry meat contains not only a great amount of nourishment but that it is alive to the fact that there are three kinds of dressed poultry—good, bad and indifferent. One has only to visit the stores of the most prominent dealers in fancy dressed poultry or to see exhibitions of this poultry at shows to realize what progress is being made in this country in producing superior table fowl, fattened and prepared in an up-to-date and artistic manner. While it no doubt is a fact that we are not as proficient as perhaps England, France or Belgium in perfecting a Standard of quality and appearance for our dressed poultry, nevertheless we are learning and are making rapid strides.

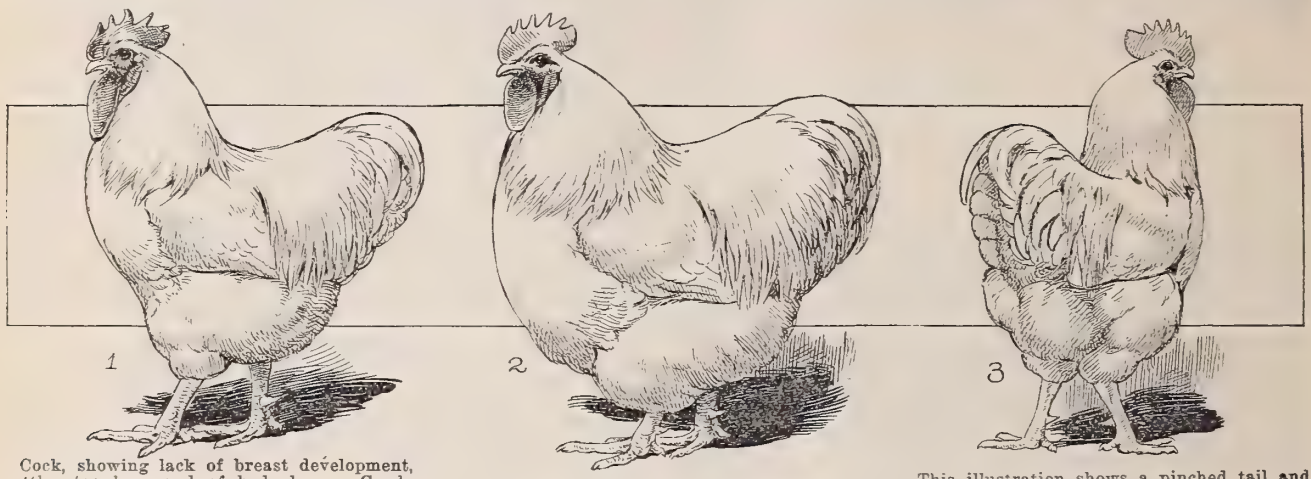
It is a laudable endeavor. This country should succeed in this line of effort just as it has done in others and in time will equal or surpass the older nations in presenting a line of dressed carcasses which will be more appetizing in appearance and in taste than anything heretofore produced. Such an effort is strictly along the lines of one of the meaning of the word "Utility." It is a useful and beneficial thing to perfect a strain of market poultry in its highest degree and all praise should be given to the men who are laboring in this field, viz: By building up a strain of pure Standard Bred fowls which have been specialized along beef lines or by crossing various breeds or varieties of Standard Bred fowls. So we are again led back to the fundamental and basic fact that these desirable types originate from Standard Bred Poultry and should be called "Market Poultry" and not "Utility Poultry" so as to avoid a confusion which otherwise is sure to result. It is manifest that the crosses or cross-breds cannot reproduce themselves. They can, therefore, have no distinctive name of their own. They cannot be sold except when dressed for their offspring will not carry on their good qualities. If the strain is the result of specializing in one particular variety of Standard Bred fowls such as Wyandottes or Plymouth Rocks due credit must be given to their Standard Bred originals or ancestors and the resulting strain cannot properly be termed "Utility" poultry, but should be called Market type or beef type Plymouth Rocks, Wyandottes or whatever else they may be. It is also perfectly clear that neither Wyandottes or Plymouth Rocks are the only breeds which could be entitled to be known as beef types. There is nothing to prevent any breeder from so specializing his breed that in time he may work it up into an important variety. By any breed we mean a fowl whose physical characteristics are such that it would pay a breeder to specialize in perfecting their carcases for meat to a larger and finer degree. We do not mean for example that the smaller, lighter, more active varieties such as Hamburgs or Leghorns are typical beef breeds and yet it is clear that at certain stages of the growth of either of these varieties they are greatly prized in the broiler market, but in a beef breed there is "Utility" in one only, that is it is perfected along the lines of flesh and it will undoubtedly be found that where this is done egg laying the meat side of the carcass the less opportunity there will must be sacrificed. The more we give our attention to be to increase or even hold the egg output. So if we are to use the word "Utility" in connection with these beef types we would be careful to specialize in what respect "Utility" is applied to them and we should not advertise a heavy beef breed only by the use of the word "Utility" Plymouth Rocks, Wyandottes, etc., but should say "Beef Type" or "Market Type" so as to let the public know what is expected from the off-spring and further than all this it must be remembered that there is no one breed or variety which at the present time is entitled to supremacy along the beef lines, nor is there any one type or form of chicken which can be termed the beef type. What kind of beef are we after? Do we want the most succulent and tender broiler, the best roaster; the most useful fricasseeing chicken or the best variety to be used for caponizing, you will find claims put forward by a great many ranging from the Leghorn to the Cochin and including a great variety of crosses or mongrels, but here again please remember to give credit where credit is due, viz: back of it all towers the pure bred Standard Bred chicken—and you cannot get away from it. It forms the real corner stone and substance of the structure upon which all claims along "Utility" lines can be based and to which all breeders of beef types must ultimately come either for their beginning or to obtain fresh blood. It is confidently believed that a breeder who starts out with the fixed purpose in mind of developing a strain which can legitimately be called a beef type will ultimately succeed far better by confining his efforts toward specializing a known variety of Standard bred fowls rather than result to crossing or originating a new breed and such a man, while he is legitimately a "Utility" breeder must give credit to his Standard bred strain and should style himself "Specialist in beef type" so as applied to this market carcass or market poultry proposition the word "Utility" has a meaning which should not be misconstrued. It means "Utility" along one line only for the specialists are the only ones that can ever succeed. What may be the best type today may not receive much recognition ten years from now, but you may bank upon the fact that the successful beef type will always be a specialized Standard chicken.

As far as our observation goes the greatest misuse of the word "Utility" is being applied to fowls which are claimed to have a superior production in eggs. The general run of people who keep poultry, prize them specially for their eggs. The majority of raisers make their money through the sale of market eggs and the Standard of egg production is constantly being raised through the efforts of conscientious and careful specialists in line breeding. The temptation of a man who has perhaps an inferior lot of layers to advertise them along the lines of heavy egg production is, therefore, great. His chances of selling are considerably increased if he can make the public believe that his hens are noted for turning out a large quantity of hen fruit, and the word "Utility" seems to be just the term he wanted to use to convey his impression. Now, it must be plain that egg production is to bs secured by the same methods and the same system of line breeding as are resorted to by the breeder of exhibition poultry, viz: To so mate his fowls that the blood of the best one will be strong in the veins of all. For this purpose a breeder of exhibition poultry selects the specimen nearest the ideal in shape and color and infuses blood of this specimen throughout his whole flock. The man who desires to succeed in producing a strain of heavy layers resorts to the trap nest and when he finds out which are

(Continued to Page 655)

THE FUTURE OF THE WHITE ORPINGTON

What Does It Hold? Will It Prove As Successful As In the Past?—Edwin Megargee, Jr.



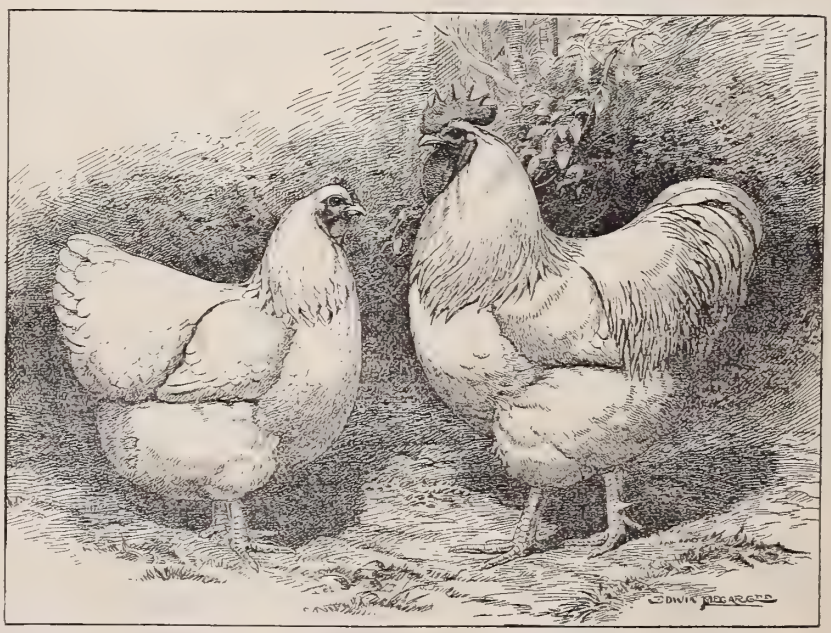
Cock, showing lack of breast development, wattles too long and of bad shape. Comb, with thumb mark and showing a tendency to lop.

Low set Cochiny type of Orpington, plumage too full.

This illustration shows a pinched tail and knock knees or cow hocks, both very serious faults.

IT HAS been more or less the fashion in the past among certain breeders of other varieties of poultry to speak of the White Orpington as a "boomed breed," not only with the purpose of reflecting on the genuineness of the claims made by Orpington admirers, but also of casting a doubt on the worth of the breed itself. While it is true that there has been some extravagant talk about the possibilities of this breed it is more or less excusable when one considers the many fine qualities and admirable traits the Orpingtons possess. Furthermore, it is idle and useless to attempt to cast aspersions on a breed so tested and proved. The White Orpington has suffered and endured more in this respect than the other varieties. It has been advertised, one might say "hippodromed," to a tremendous degree and in a way that was positively harmful. Despite the bad effects of this improper advertising and the resultant checking of the progress of the variety it has maintained its hold upon the affections of breeders and fanciers alike.

Of course in any breed and variety there is always room for improvement, and the White Orpington is far from being an exception to this rule. In a variety that has produced so many specimens that are almost perfect in type as this variety has, I think that greater efforts should be made toward attaining a higher degree of general excellence. I am not speaking so much of color as of type. Uniformity of type is the thing to be desired. In the show rooms one sees entirely too many rangy, leggy birds, too many birds lacking in breast formation and many that are as full feathered and low set as Cochins. To me this last is the type that is most to be deplored. One may do something in the way of production with the tight feathered, leggy fowl, but these low set squatty birds are almost absolutely useless, and to my mind they are a unlovely as they are unproductive.



Pair of High Class Exhibition White Orpingtons, showing a proper length of leg and the type of body that is desirable.

All of these faults can be corrected, and it is purely a matter of self discipline with the breeder, if he can school himself to keep the type ever in mind and to subordinate color to it. The thing is done, and it is merely a matter of time until the results prove it.

Of course color problems must have fair and proper consideration. The chief troubles experienced by breeders of this variety are creaminess and brassiness in the plumage and white in the ear lobe. Both of the faults are those of inheritance and they are the more persistent because of the comparative newness of the Orpington as a breed. The brassiness comes from the intermingling with the Buffs, in the effort to get type, and the ear lobe trouble is the result of the Leghorn cross, that was used in the production of the variety. Rigid culling and patience are the corrective measures to be used in dealing with these color problems.

It would be a great pity if the White Orpingtons were permitted to wane in popular favor, and while there is but slight danger of this occurrence, still it is undeniable that of late the classes of this variety in the big shows are not so well filled as formerly. This is inexcusable and if the breeders will show a proper degree of aggressiveness in pushing the claims of their favorites, we will speedily see them in the position they formerly occupied. There is no breed or variety that is not in a great measure dependent upon the co-operation of its breeders,no matter how worthy it may be. The White Orpington is well able to prove its worth, both as business and show bird wherever given a trial to prove it.

POULTRY RAISING PAYS FARMER BEST

Same Care as Given Stock Would Produce Twice Income With Fowls—Chance For The City Man—Only Small Plot and Few Well-Bred Birds Would Give Good Start—
J. Harry Wolsieffer.

NINETY per cent. of the city people who seek homes in the country have their minds on a flock of poultry, even though they do not design to take up poultry culture as a business. It is the universal opinion that there is money in poultry, and so there is when properly managed. Be the flock large or small, it pays the ruralist to have a fine flock of fowls. He not only has fresh eggs and poultry for his table, but there are great hunks of satisfaction in being possessed of such birds. Ii is not the desire of the majority of town folk who secure homes in the country to establish a poultry plant on a large scale, but they desire to produce a variety of crops, largely composed of vegetables, fruits and flowers, and keep a variety of animals. Poultry, of course, comes in for its share of attention.

There has been a strong disposition on the part of city people to return to the country. Those able to purchase a small holding for a summer home look for desirable properties not too far out, for those on the line of the electric road are much in demand. Further back are larger and proportionately cheaper farms, but even here can be found small places that are desirable and that will make good poultry, fruit and truck farms, such as the majority of working people from the cities are looking for. This is a condition that exists in every state.

There is no need of any one pulling up and moving hundreds of miles away in order to secure a home in the country. Thousaands of these places are within easy reach, and almost any one can find such as he can afford to purchase. Farm values are as low as they probably ever will be. Farming as a vocation is becoming more popular each year. We have land enough in the United States to give every one 29 acres, and half of this amount of the right kind of land, well located, devoted to poultry, small fruits and truck, will afford a comfortable living for a man and family. To farm one needs more land.

Poultry, on the farm, is paying stock. It will bring in more for investment than any other stock. Dairying, hog growing and beef breeding may all be profitable industries, but the same amount of money, brains and labor put into poultry will pay fully twice the profit. A flock of 500 laying hens, properly housed and managed, bring in from $800 to $1200, and the value of the feed consumed should not exceed $500, much of which can be produced on the farm. It will take 75 to 100 hogs or 16 cows to bring in this amount of money, and there will be no more clear profit from them.

Many farmers keep 500 hens who do not receive anywhere near this amount of money from them. The reasons are they do not have the right kind of hens in the first place, and in the second place do not give them the right kind of care. Mongrel hens or those of promiscuous breeding will not pay such profits. Not more than 50 hens should be kept together by the beginner. If they are to be allowed to run, they should be placed in colony houses, distributed over the farm. These houses may be placed on runners and moved from place to place. Though small houses are not as desirable as large ones, permanently located, the only advantage of the colony houses is that they can be drawn to the fields in summer and back near the farm buildings in winter, thus saving considerable travel in cold weather. Where the buildings are permanent, it is best to have a fair-sized yard to each house, so the fowls can be confined, if desired, where there is no danger of their damaging growing crops.

Separate buildings are in demand because of the different uses to which they can be put.

The farmer's poultry plant should consist of a brooder house or a number of colony brooder houses and as many larger colony houses as are necessary to shelter the desired number of hens, allowing not more than 50 hens to a pen. If the hens are to be yarded, a long house with several compartments can be used. The colony plan is the best for farm conditions, and the houses should be so situated that they can be reached easily with horse and wagon, so feed can be drawn to them and droppings carried away.

Special crops can be grown for the hens, thus saving much of the grain and other feed that would have to be purchased, or that can be used for other stock. Growing stock should be moved to the grain fields after harvest, where they will pick up the waste grain and for a time require but little other feeding. This is the way to grow the pullets cheaply and well. The cockerels should be disposed of by this time. The farmer who allows a lot of young males to run with his poultry until fall is not managing his fowls in a businesslike manner. The argument is sometimes advanced that the farmer cannot afford the time to give growing chicks proper attention, as they come just the time when spring work is crowding him. He finds time to look after other stock. Why not the chicks? If he has a sufficient number to make it profitable he can devote a day now and then to their care. When eggs only are wanted, and one of the non-setting breeds are kept, their hatching should all be done at one time. The incubating capacity should be large

enough to supply all the chicks needed, and when these are placed in the brooders very little further attention is required. If the farmer follows the plan of continuous feeding for a week, the chicks must be looked after, but as soon as they have passed the danger zone and have learned to know their quarters, the rest of the work will become a regular chore and will not be felt nearly as much as the milking of several cows and numerous other chores, which he does not think too trifling to attend to.

Mixed farming with poultry growing or egg farming a leading branch, cannot help but be profitable if properly managed. Nearly all the feed is raised on the farm, and the money received from poultry and eggs represents the production of a portion of the farm marketed in a concentrated form. There is profit in keeping fowls where the greater portion of the feed is raised. There is a profit from the poultry and a profit from the grain, if the grain can be produced at a profit, which it can be, when fed to the hens, as there is no waste and all unmarketable portions consumed.

OUR GUARANTEE

We guarantee every subscriber against loss due to fraudulent misrepresentation in any display advertisement appearing in Everybodys Poultry Magazine providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in Everybodys Poultry Magazine and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it comes.

Fifty cents the year. Three years for $1 in U. S. and Mexico. Canada, 25 cents per year extra. Foreign countries, 50 cents extra.

A renewal blank will be inserted when subscription expires.

ADVERTISING RATES ON APPLICATION

SAMPLE COPES sent free to all interested. Subscription agents wanted.

Manuscript and copy for change of advertisement must be in our hands promptly by the 10th of the month preceeding date of issue. New business can be accepted to the 20th, but no special position can be assured.

WHEN WRITING ADVERTISERS MENTION "EVERYBODYS"

Christmas Day is a festival universally observed since the days of Antonius Pius 138-161 A. D., but the first certain traces of it are found about the time of the Emperor Commodius Merry 180-192 A. D. For centuries this day as well as those preceding it, and those following it were given over to frolics and mirthful games, and we still perceive in some parts of the world, the lingering remains of the sports which were wont in the earlier times to enliven this comfortless period of the year, in which the anniversary of the great event occurs.

Christmas parties and Merry-makings are still formed, the yule log still has its place in memory, and in fact, while the Boar's-head has been replaced by Chicken, Turkey or Goose, the mistletoe is still hung up with care, so are the stockings—

"In hopes that St. Nicholas soon will be there,"

while old and young alike look forward too and welcome Christmas Day. The vigorous celebrations of the olden-times are past, our custom of celebration with words of cheer and good wishes to all fellowman is dignified and in keeping with the times, friends and friendship stands for more than it ever did before and the good wishes of Christmas Day are accepted sincerely.

We wish to pass this Merry-Christmas cheer, of health, happiness and success over this broad land, over every land, and its people, with the hope and wish that "Peace on Earth and Good Will to All" may be attained and hold forth ever after.—H. P. S.

Every person owes it to themselves and those dependent upon them to look to the future. What that future has in store for us, we cannot tell, but we can tell and do know, that it will be largely regulated by our work and efforts of today and of this time. By due consideration of conditions and study of possibilities we can plan to advantage for time to come. We can arrange to be in a position to accept conditions and meet them with preparedness, so that the opportunities offered will not find us wanting, but find us ready to welcome them to personal and general advantage.

As we see it, there is no chance being taken in poultry breeding, possibilities never offered more, food prices promise to be lower, while the prices of poultry meat and eggs are sure to keep high above the profit paying mark. The ever-increasing demand assures this. Year after year, this demand has increased at a greater rate than the supply, sending prices a-soaring often above real food values for select dressed poultry and eggs.

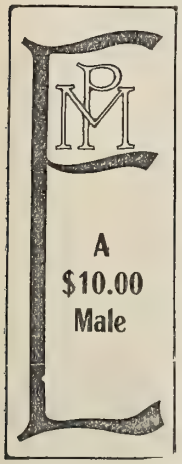
The middle-man to some extent has been a factor in this, and very often the producer has not received his due. Here is where the poultrymen should look ahead to securing their own direct market, either singly or by a co-operative plan, by producing more

poultry and better poultry for quality will find its level and its market as well.

As stated with an unlimited demand that is ever increasing and that is being rather poorly supplied, there should be a proportioned basis for poultry production. If every farmer in this country would keep from three to five hens for every acre of land they own or work, it would, to our notion be the proper amount he could handle, feed and keep at their best, with the least cost to himself.

Farmers plan to yearly grow a certain number of acres of wheat, corn and oats, according to the size of their farms, and their ability to work the land and harvest and store them. Would it not be consistent with this to also grow a proportioned number of fowls? We believe it and feel the day near when this plan will be generally adopted to advantage.

While you look ahead and plan to raise more poultry, look far enough ahead to note the advantages offered you by only raising Standard-bred Stock.—H. P. S.



One way, and the right way to sell goods, to make business and to create a demand is to show the public, when there is value and worth along with opportunities for them to profit by. The public has the right to know, to see for themselves, and we whose interests are in this great poultry industry, have the goods of merit to show them and are glad to do it. For this purpose we lately sent out a hundred letters to breeders asking them to write an article for "Everybodys" of from 300 to 500 words (more if need be) on "The Value of a $10.00 Breeding Male"—the replies received so far are very satisfactory, so much so, that we have concluded to open this question up wide, and to ask all to consider this subject and to send us their articles, which we will publish from month to month. In this way we hope to bring this question prominently before the breeders and farmers of the country, who can be benefitted by the advice and experience of others; we now invite all our readers to submit an article along these lines. It is a National question, one that properly handled should add thousands of poultry keepers to the standard of Standard-bred poultry breeders.

Our idea is to reach out, to lay the epistle of Standard-bred poultry's worth before the half-million or more poultry keepers, who do not know, who have not had the opportunity to learn or know the value of Standard-bred poultry. We feel that if they will but interest themselves and make a start by buying a standard-bred male at the reasonable price of $10.00 to head their flock, that they will readily note the benefits derived in one season's time and from mongrel and grade-stock breeders they will graduate into breeders and fanciers of high class, Standard-bred stock with satisfaction and profit to themselves.

Equal opportunities for poultry success are spread over this great country. General demands and conditions out-weigh local conditions and success with poultry is assured when No. 1 quality is produced. We don't expect to accomplish everything in a day, a month, or a year, but we are making a start that we hope to follow for time to come, backed by our breeders. We hope to show the breeders and farmers who consider poultry a secondary crop, only handy to have around to pay the grocery bills, that the American Hen is truly great, that poultry to some extent at least, is the best paying crop produced and that the best results can only be obtained by keeping and breeding Standard-bred Poultry. If in this we can be assured that but one man or woman has been led to success we will feel amply repaid, but we have that absolute confidence in poultry and in poultry keepers to feel assured that thousands will follow the standard-bred banner, if we can but show them the way. Now will you help us?

We consider that most any person would pay $10.00 for a male of known breeding value, that this male, bred to mongrel, grade or pure-bred females would assure results and improve the production of eggs. Eggs are always ready money, they are profit and interest on investment and both can be increased by care in feeding, keeping, etc.

But this question of similarity, of grade and quality is the one generally overlooked and no credit given. Here is the real opportunity for gain, which depends for size only on the amount of stock you raise and keep, with poultry selling from 15 cents to 25 cents per pound, according to season, a gain from one pound to three or more pounds of weight in each specimen, produced at no more cost, is the item to consider. The best of size easily produced at a minimum cost with a sameness in form and quality, will fetch the highest market price, while your profit is increased, by the increased total number of pounds. This, like every subject, has two sides to it, but unlike many others, both sides favor the standard-bred hen. We are absolutely in favor of her and assure one and all that they can and will succeed if they but try, and that the amount of gain and profit depends upon their efforts alone.—H. P. S.

SUGGESTIONS

Suggestion is a great power in business, it has given life and action to some of the biggest enterprises in existence today. A single word of advice has converted failure into success. A simple suggestion has given some men an entirely new line of thought and has enabled them to rebuild a big, successful business on the ruins of a miserable wreck.

Everybodys will offer you monthly suggestions, ideas and advice in its several departments that will be worth your consideration. Read Everybodys thoroughly and profit by it, also while you are at it, send some suggestions this way for our consideration. We want everybody to have a special interest in "Everybodys" now and all the time, to help make it "The Leader in Fact" and of special value to every poultry interest and subscriber.

* * *

NO SPECTER OF FAMINE

Academic economists who have reached the conclusion that the time will come in this country when the land will not produce sufficient food to support the population will be entitled to "another guess" after studying recent crop estimates by the experts of the Federal Department of Agriculture. It is officially announced that the returns indicate a production of approximately 3,000,000,000 bushels of corn, 1,500,000,000 bushels of oats, 1,000,000,000 bushels of wheat and nearly 250,000,000 bushels of barley. It is not anticipated that it will become necessary to consume hay directly as human food, but the crop of hay is estimated at 80,000,000 tons, not in-

cluding 20,000,000 tons of wild hay. But this hay will serve the same purpose, when used for feeding farm animals. Famine is not yet stalking in this land.

* * *

RURAL POSTAL ROUTES

Rural postal routes 50 miles or more in length are now served by motor vehicle at about 100 different points in the United States. This system went into effect about June 1, and is giving better service to the public at less cost to the post office. The only requirement as to the mode of vehicles is that each shall have a carrying capacity of at least 800 pounds and 80 cubic feet. This enables carriers to employ almost any kind of motor car and many types are in use. Probably it will not be long before the major part of the postal delivery service in town and country will be done by motor vehicles. The next step will be the motor post coach to carry passengers as well as parcels and letters.

* * *

THE TOAD

The toad lives from 10 to 40 years, and it can lay over a thousand eggs a year. It has lived two years without food, but cannot live long under water. It never takes dead or motionless food. It captures and devours wasps, yellow jackets, ants, beetles, worms, spiders, snails, bugs, grasshoppers, crickets, weevils, caterpillars, moths, etc. In twenty-four hours the toad consumes enough food to fill its stomach four times. A single toad will in three months devour over 10,000 insects. If every ten of these would have done one cent of damage the toad has saved $10.00. Evidently the toad is a valuable friend to the farmer, gardener and fruit grower, and can be made especially useful in the greenhouse, garden and berry patch.

* * *

CARE OF WILD DUCKS

The United States Government has adopted another aggregation of wards. It now proposes to take care of wild ducks. With the- gradual enroachment of settlers and their cultivated plantations on low lying shore lands, especially in tide-water regions, and the consequent drainage of such places, the feeding fields of wild ducks have been seriously curtailed. Pond-weeds upon which they feed almost exclusively are rapidly disappearing. To offset this, the Bureau of Fisheries is now engaged in propagating aquatic plants to take their place. Six varieties are being grown that the requisite diet may be supplied the birds. Their tastes differ, the Bureau anounces, and, since one species does not eat what another species prefers, propagation and planting of all half-dozen varieties are necessary.

* * *

OUR VACANT LAND

There is still room in this country for the pioneer. The government land office reports 279,544,000 acres still "unappropriated and unreserved," of which more than half has been surveyed and is ready for entry. More than 11,000,000 acres were taken up last year by homestead and other entries and sales of individuals. At that rate the remaining land will last a good many years yet. And when it is all gone there's 300,000,000 acres more in Alaska.

Of course a great deal of this vacant area is worthless mountain, desert or swamp, which man in all probability never will be able to utilize. Nevertheless, a good deal of it is thoroughly worth taking. And many a tract that now seems hopeless will ultimately require value through irrigation or the application of dry farming methods or the drainage of swamps or the discovery of mineral or the establishment of health resorts.

* * *

RATION PROBLEMS

There is no best egg laying ration. Climate, section, condition, quality, and variety all have their peculiar values and effect. The proper ration for you to feed for best results must be largely worked out by you and experiments in feed and feeding are always interesting to note.

A scratch grain mixture for laying hens used at the Connecticut Egg Laying Contest, will be a good basis to work upon. It consists of sixty pounds cracked corn, sixty of wheat, forty of oats, twenty of barley, ten of kafin corn and ten of buckwheat.

The dry mash as follows: Two hundred pounds coarse wheat bran, one hundred pounds of gluten feed, one hundred pounds of ground oats and seventy-five of standard midlings, eighty of meat scrap and twenty-five low grade flour.

The Cornell winter whole grain, egg laying ration has no barley, but is composed of sixty pounds of wheat, sixty pounds of corn, thirty pounds of oats and thirty pounds of buckwheat. The dry mash fed in hoppers during the afternoon only. is sixty pounds of corn meal, sixty pounds of wheat bran, ten pounds of wheat middlings, thirty pounds of alfalfa meal, ten pounds of oil meal, fifty pounds of beef scrap and one pound of salt. Half as much mash by weight is given as of whole grain. No more of the mixture is given than the fowls readily clean up. The poultry man must regulate this amount.

C. An egg tester is shown in the patent to James M. Halley, of Kaytesville, Missouri. This invention, which is electrically operated, is provided with means for closing the circuit to cause an electric bulb to glow in suitable proximity to an egg in order that the same may be tested. Means are also provided so that the bulb may be made to intermittently glow and also permanently glow, upon the movement of an egg. The invention is designed so that a number of eggs may be tested at the same time.

The older the egg the less is that sweet, rich flavor noticeable.

When writing advertisers, mention "Everybodys." Thanks.

Still On Top

Following our wonderful record of 22 First Prizes out of a possible 25 and ALL Specials and Best Display, which we made at the Tri-State Fair at Trenton, N. J., we shipped several of our White and Buff Leghorns A THOUSAND MILES, to Atlanta, Ga., and then won against the Cream of the South's stock, First Prize in every class,—Cocks, Hens, Cockerels, Pullets and Pens. And not only First Prize but in most cases our birds were first, second and third. Read this list carefully.

WHITE LEGHORNS

Cocks, 1st, 2nd, 3rd, 5th
Hens, 1st, 2nd, 3rd, 4th.
Cockerels, 1st, 2nd, 3rd, 4th.
Pullets, 1st, 2nd, 3rd, 4th.
Pens, 1st, 2nd, 3rd.

BUFF LEGHORNS

Cocks, 1st, 2nd, 3rd.
Hens, 1st, 2nd.
Cockerels, 1st, 2nd, 3rd.
Pullets, 1st.
Pens, 1st, 3rd.

Isn't the strain that outwins its field, as Wilburtha does, the one you want to build on or to infuse into your present flock? Remember, Wilburtha Birds are bred to lay, to pay and to win. They're second to none.

S. C. White Leghorns

Bred for exhibition and utility, they continue to maintain their acknowledged excellence in the face of all competition. Last call for show birds that will win for you in this season's shows. "They are always in the ribbons."

S. C. Buff Leghorns

The enviable record these birds have made in the Show Room leaves little doubt as to their quality. They are bred with the Wilburtha care and attention that means "nothing but the best."

Col. Wyandottes

Wilburtha's reputation as "Headquarters for Columbian Wyandottes" is just as deserved this year as ever before. A Wilburtha cockerel won the Spratt's Cup at Trenton for the best bird in the show, raised this year. This is the first time this prize has been won by a parti-colored bird. Come to headquarters if you want the best.

Col. Plym. Rocks

Birds that have won, are now winning and will win in future shows. Excellent stock for foundation. Prices reasonable. Reserve now.

S. C. R. I. Reds

Particular attention has been given to the development of this breed. Our award of Best Display at the Syracuse, N. Y. State Fair and among other winnings, 1st Cock, 1st Cockerel, 1st Pen, Best Male and Best Display at Trenton tells how well we have succeeded.

You are cordially invited to come to Wilburtha and see for yourself. A visit will well repay you. If you can't come, by all means write for handsome catalog, it's *free*.

The Great West
by Estelle E. Collier

THE first Seattle show will be held by the Poulry and Pet Stock Association, December 13th to 18th, wih L. A. Lukam, Secretary, and James A. Tucker and Will Purdy, as Judges. These judges are well-known on the Coast where they invariably give satisfaction. Seattle boasts of two poultry Associations and both are progressing with a large and increasing membership. The town of Seattle is the big city of the Coast, ranking next in everyone's mind to San Francisco with Portland and Tacoma following close behind. Porland holds a good show each year. That city is more like an Eastern city than the Coast cities usually are. It is unlike Seattle and Tacoma, as it is built on level ground while Seattle and Tacoma are eternally on the job of cutting down the hills and immense terraces.' The Seattle poultry show is always held right down town in the business section and is always full to overflowing with crowds from the time the doors open in the morning until they close at night. Tacoma being only an hour and a-half distant, makes it convenient for anyone living in Tacoma to attend until closing time at night and return home for the night. All the poultrymen of Seattle are interested in what the poultrymen of Tacoma are doing and a friendly rivalry exists whenever the blue ribbons are passed around. If the Tacoma man can get the blue ribbon from his Seattle brother in his home town it is a bigger feather in his cap than a dozen blue ribbons won at home and the same is true when the Seattleite comes with his birds to the Tacoma show. Mount Tacoma looks down on both cities impartially and refuses to let one town spirit outdo the other. When the circular raincloud hangs above the mountain on a sunny day it predicts rain for Seattle as well as Tacoma.

Tacoma will hold her twenty-second annual show December 28th, to January 1st, 1916. W. M. Coats will judge the show. He is well known on the Coast and all the Northwest. He hails from British Columbia. Up there the poultry shows have had a bad time. They are run by the Government in Government owned buildings. Now since all English subjects are getting ready to join those at the front in the world war going on in Europe all these buildings are requirsitioned for barracks and training quarters. The money usually appropriated for poultry shows will help equip men for the war. The Tacoma show promises to be a huge affair this year and we hope to see all the winners of the big San Francisco show here.

The Washington State Breeders Show will be held with the Yakima Poultry Association at North Yakima January 6th to 10th, 1916, with A. F. Linse, Secretary, and H. H. Collier and Oscar Nelson, as Judges. The expect a big show there as the birds at the Tacoma show, especially those that come from the Spokane and North Yakima vicinity will be home in plenty of time. The winters over in Eastern Washington are dryer than over here on the Coast but much colder. It is an irrigated country with every street and home supplied from a running stream from the mountains. Every farm has its irrigation ditch, and the fine orchards and large poultry ranches over there testify as to the value of their high, dry climate. Turkeys do especially well over there and reach great size. Young birds, a year old, often grow to weigh forty pounds.

Many poultry raisers on the Coast have become deeply interested in the Sussex, a new breed on the Coast. Silver Campines have come with us to stay and some of our old time breeders have taken them up in preference to the older, heavier breeds that they favored before.

The price of grain is getting back to normal. People will be thinking the poultry business, the most profitable business to be in, in a small way if the price of grain goes down much lower. High priced grain causes the man with a large flock of hens to sell out all that are not producing at the minute and breeders of fancy poultry often cripple themselves for the next few years because of a few months of high-priced grain. The man who feeds costly grain must of necessity keep costly fowls that will produce something besides the eggs for market. Only pure breeds are really worth while after all. It will be only a short time before all the birds raised on the Pacific Coast are pure breeds and kept up to the Standard. Very few mongrels are seen now. You can drive for miles and miles without seeing a mongrel. The West is settled so closely now that there is very little chance to see what frontier life is like. Where the railroad does not go, the boats do, and the huge forests are fast disappearing into huge lumber camps that sweep away the trees like wheat before a scythe.

Eggs are higher than in years. With grain low and eggs high there should be a great boom in poultrydom

A Victory At Hagerstown

After a record winning at the New York State Fair, Martin's Regal White Wyandottes follow it up with another sweeping victory at Hagerstown, Maryland. This is the great round-up where victories at the earlier shows meet in the final contest for Championship honors. Forty Regals were entered and thirty-six were under ribbons as follows:

Cocks 1—2—3—4	**Cockerels 1—2—4—5**
Hens 1—3—4—5	**Pullets 1—2—3—5**
Pens (old) 1—2	**Pens (Young) 1—3**

In addition to these regular prizes, the cockerel heading the First Young Pen was awarded the championship Trophy for being the BEST BIRD IN THE SHOW. This was decided by fifteen Judges. Could there be any stronger vindication of Regal Supremacy?

Prices very reasonable and quality better than ever before.

3000—COCKS, HENS, COCKERELS AND PULLETS FOR SALE—3000

FREE—20-page catalogue and price list giving photographs of plant and winners.

Send one dime for copy of the Regal White Wyandotte Book telling all about the Regal Strain.

JOHN S. MARTIN

BOX D **PORT DOVER, CANADA.**

this year. The Alaska trade is ever on the increase and the poultrymen of the Pacific Coast will have to hustle to raise enough hens to fill orders from the North. Every year the Missions, from so far North that only one trip can be made in each year before the ice closes them in, send down to the breeders of Tacoma and Seattle for stock and eggs and the remarkable thing about it is that they never limit the price and want the best that can be bought for breeding.

Pierce County is in the lead again. At the big San Francisco fair Pierce entered more birds than any county in the State of Washington. Spokane County was second on the list. The State of Washington had more birds entered than any State outside of California. The State of Washington duplicates all prizes won by the breeders of Washington. All the birds will meet at Portland and go from there direct to San Francisco by boat. This is not a bad idea (providing the boat doesn't sink) as the sea air seems to be very beneficial to poultry. Sea Captains of our acquaintance say that birds that seem fit for nothing but the table will begin to lay as soon as they get out to sea. I suppose they enjoy the rolling motion of the boat more than people. There is one thing about it, it gives them plenty of exercise trying to keep on their feet when the sea rolls high. It is a beautiful trip by water from Portland to San Francisco earlier in the year but the sea runs high at this time of the year.

NIXON'S WHITE WYANDOTTES

Every White Wyandotte breeder knows that Chas. Nixon, Box 100, Washington, N. J., has established a reputation for being able to produce White Wyandottes of exceptional quality. This can be attributed to his 20 years breeding of this one variety, together with his many years experience as a judge in our leading American Shows.

It is with pleasure that we call your attention to his advertisement on another page of this issue, and can recommend him to you with the full knowledge that he can please you, both in quality and price.

Mr. Nixon has been very successful in hatching and rearing to maturity a large number of chicks the past season and at the present time, can suit your every requirement. His winnings at Madison Square Garden and the New York State Fair during the 1915 Show season are conclusive as to the quality of this line.

We have an interesting letter from him in which he states that he has never before had a grander collection to select from, either in yearlings or young birds, and the quality is fit to win at any Show in the World.

Write him today mentioning his ad in Everybodys, and by return mail you will receive his catalogue and prices.—J. T. H.

DECEMBER

A few of the prominent events and happenings during the month of December in the past are recorded below:

1, 1816—First Savings Bank (Philadelphia.)
2, 1823—The Monroe Doctrine proclaimed.
3, 1818—Max von Pettenkoffer born.
4, 1894—Robert L. Stevenson died at Apia, Samoa.
5, 1870—Rome declared the capital of Italy.
6, 1912—Monarco had the smallest army in Europe, 4 officers and 82 men.
7, 1542—Mary, Queen of Scots, born.
8, 1776—Washington crossed the Delaware.
9, 1680—John Milton born.
10, 1672—Monthly post started getween N. Y. and Boston.
11, 1843—Koch, discoverer of B. of Tuberculosis, born.
12, 1898—Columbus' bones removed to Spain.
13, 1454—Post offices were first established.
14, 1799—Death of George Washington.
15, 1890—"Sitting Bull" Indian Chief, killed.
16, 1773—Boston Tea Party.
17, 1895—X-Ray discovered by Prof. Rantgen.
18 1799—Washington buried.
19, 1880—Broadway, N. Y., lighted by electricity
20, 1829—First asylum for the blind in Boston.
21, 1889—The "grippe" appears in United States.
22, 1620—Forefathers Day in memory of the Pilgrims.
23, 1620—Samuel Fuller selected first physician for New England.
24, 1894—First Medical Congress at Calcutta.
25, ———Christmas Day.
26, 1851—Telegraph fire alarms adopted, Boston.
27, 1822—Pasteur born.
28, 1856—Woodrow Wilson born.
29, 1847—Postage Stamps first used.
30, 1732—"Poor Richard's Almanac" Ben Franklin.
31, ———New Year's Eve.

Why This Talk About Two Standards?

Our Standard Enough For Any Breed That Shows the Improvement Barred Rocks Have Made—Breed to the Standard We Have For Greater Poultry Beauty and Success—L. J. Upham.

THE surprising part of it is that some of it originates with supposed to be friends of the Grand old breed.

Two standards for one breed, the idea is as original as impracticable, and the Dear Old Barred Rock is selected to try on this mis-fit. I suppose it is because of its ability to withstand all these assaults and still maintain its prestige of being the most popular fowl yet produced. It seems a bit late in the day to make this startling discovery, for the writer has been mating and breeding the Barred P. Rock over forty years, and has seen constant improvement all these years, until the standard bred Barred P. Rock today is a bird of highest type and exceptional beauty.

I do not refer to that "faddish freak" which some breeders have produced, for instance a male with 50 to 75 bars to a feather, with tail coverts nearly solid purple, and wing bows one blotch of brassy bronze, and on this tablet of bronze should be inscribed these words:

"IN THE HANDS OF THE ENEMY"

The breeders who have produced these specimens and the judges who have recognized them with blue ribbons, are not friends of the Grand Old Breed.

Can we not almost unanimously agree that the male of today answering standard description as to type and being snappily, brightly barred in every section (wing bows included) is the most beautiful bird ever produced? Can we not also agree that the female with clean cut, evenly-spaced barred plumage with standard type is the most beautiful female yet produced? If we do not agree, then make a standard descriptive of this male and female. But some one says "we already have a standard," so say I, and I say further that the above beautiful specimens conform very closely to our present standard.

When you have settled what constitues the most beautiful birds, and give them a standard description, you have settled what constitutes the key to the whole situation. You have the standard to breed to, you can choose your own system to produce standard birds single mate, double mate, mate as you please, but you must breed birds of standard requirements and the judge must render his decisions in accordance with the standard.

All breeds have one standard giving the type and plumage characteristic of both male and female. Why should our Barred Plymouth Rock be afflicted with two standards?

When a standard is recognized as it should be, then the dreams of these freak breeders will not materialize. We shall not have foisted upon us the 75 bars to a feather bird with purple tail coverts, bronze wing bows, and greenish shaded legs, or females carrying horizontal (drooping tails), indicative of mourning.

It is time breeders awoke to a realizing sense of what is happening to the Grand Old Breed.

Why don't you whole-souled, broad-minded, loyal friends of the Barred P. Rock publicly protest against these assaults on our Grand Old Breed? While I appreciate the fact of your writing to me endorsing my views, it does not have the effect your public protest would have. Write to Everybodys a few words and let it be known that a large majority of breeders believe in letting well enough alone. Breeders of other varieties of fowls are double mating. What for? To produce the most beautiful bird possible. Are they asking for two standards for their one variety? No! Just think of it, fellow fanciers, two standards for one breed, and what for? Echo is still asking what for?

NOTE—L. J. Upham, Webster, Mass., is the son of one of the originators of the Barred Plymouth Rocks, who has bred them through life and who knows their qualities and characteristics. We agree with him fully that our present standard, if followed, will give required results.—H. P. S.

Owen Farm Birds Will Win Wherever They Are Shown :: :: ::

If You Are in Dead Earnest in Your Desire To Win, Place Your Order With Me.

OWEN FARMS

Buff and White Orpingtons, White Rocks, White Wyandottes, S. C. Rhode Island Reds and S. C. White Leghorns.

have demonstrated their superior merit at MADISON SQUARE GARDEN (New York), GRAND CENTRAL PALACE (New York)' BOSTON, CHICAGO, CLEVELAND, PITTSBURGH, SYRACUSE, ALLENTOWN, ATLANTA, AUGUSTA, NASHVILLE, MEMPHIS, LIVERMORE, (Cal.) and BROCKTON (Mass.), by winning

More Firsts Than All Competitors Combined

THOUSANDS OF PRIZES at hundreds of shows all over the World have been won by Owen Farms Birds in customers' hands.

Winners Furnished For Any Show In The World

370 Owen Farms Birds Have Won First Prizes At Madison Square Garden, New York.

—1915 QUALITY—

Selecting and shipping birds to customers for showing at the Fairs and for breeding purposes have made me realize more and more the superlative quality in my 1915 youngsters. They are the best ever grown on Owen Farms, which means the best ever grown anywhere.

—UTILITY QUALITY—

Owen Farms Birds are famous the country over for size, bone, perfect health, vigor, prepotency and heavy laying qualities. There are no birds that excel them in these important functions and very few flocks anywhere near as good.

My Birds Live, Grow, Lay and Pay

—BREEDING BIRDS—

You are now planning your matings for the coming season. Why not place your order with me at this time for future delivery? My flocks are very large now and can make a splendid selection of a bird or birds to meet your exact requirements. A 25 per cent deposit will hold your bird or birds for you and delivery will be made when you need them. An early order will work to your advantage and to mine.

Satisfaction Guaranteed Every Customer Every Time

and this guarantee is backed by my 26 years experience in selling thoroughbred poultry.

When writing advertisers, mention "Everybodys." Thanks.

ADVERTISING & ILLUSTRATING

BY EDWIN MEGARGEE CRANFORD N.J.

In this department it is our intention to have monthly, articles and items that will be of interest to poultry breeders and advertisers, our purpose being to arouse a deeper and more critical interest in advertising in general, as well as in our own pages.

The advantages of good advertising will be discussed in these columns and suggestions in the form of sketches of borders, illustrations, etc., will be shown. Our services are at your disposal for advertising work or illustrations and satisfaction is assured. We believe that in this way we can help our advertisers and in so doing help ourselves, because the results you obtain through your advertising in Everybodys are vital to us.

I THINK that it is hardly necesssary in this day and age to convince anyone of the desirability of advertising, or of the results obtained by so doing. Those who are still unconvinced are, I am afraid, quite hopeless and are so in the minority that they are not worth troubling about.

The hen is one of the best exponents of the policy of advertising. This was quite amusingly displayed in one of the posters used in connection with Cohan's play, "It Pays to Advertise," which ran last year in New York. On it was pictured a stolid duck with a very large egg along side of it, a cackling hen, and beside her a relatively small egg. The caption "It pays To Advertise" was obvious.

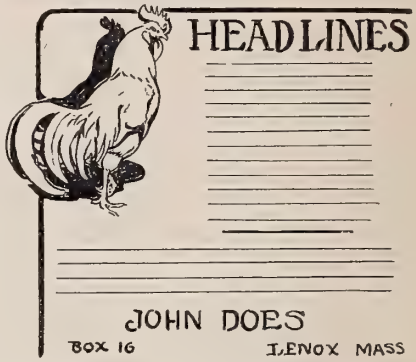
Everyone who keeps Standard bred poultry and who hopes to profit by it should advertise. Advertising of the right sort consistently and persistently carried out, is bound to create and maintain a demand for stock and eggs; such a demand as can be obtained in no other way. The demand being created, however, it is then necessary that the quality of stock be equal or better to the claims made in the advertising.

"Bluff" advertising may sell goods to anyone once, but never twice, therefore be sure that there is no over statement in your advertisement. To me quiet conservative statements are much more convincing than loud asserted ones. Don't claim that you have the best in the world or that you have quality unsurpassed or unequalled. This sort of advertising reminds one of the story of The Three Tailors doing business on the same street. One displayed a sign reading "The Best Tailor in The World;" the second was somewhat more conservative, his sign was "The Best Tailor in The Town;" the third having greater modesty and something of a sense of humor, lettered his sign "The Best Tailor on This Street." This is not only a story, it points a moral. If one makes tremendous claims, he only makes himself ridiculous and arouses the incredulity of his reader immediately.

Furthermore, think of the condition of the advertiser, who having used up all of his available supply of adjectives in extolling his stock, begins to rack his brains for other and stronger ones. He is pointed straight for the insane asylum. There is a man I know who breeds Bantams. I like his advertising immensely. His claims are modest, yet he is the greatest living breeder of his special variety. He may give a list of the more prominent of his winnings, and he will add "A Few Good Birds Occasionally For Sale," or merely "Stock and Eggs For Sale." The point is that he is always modest and never brags in his advertising.

Advertising should be unusual and striking in design, either in lettering, type or decoration. By unusual, I do not mean weird or extravagant. The addition of an attractive design is, needless to say, of great benefit, it arrests the eye of the observer and leads him to read the "copy."

The most common fault among advertisers is that of crowding their ad. It is prompted by the desire on the part of the advertiser to tell his reader everything he knows or has accomplished. He must tell just how fine his stock is and how marvelous it is from a utility standpoint. Then he is burning to give a list of all his winnings, not only at New York, but at South Ducksbury, Rahway and Piewnkadunk as well. He must put in that he has stock for sale at all times and eggs in season and he gives a list of prices of course. Then, to cap the climax, he sticks in the corner the information that correspondence is solicited and that he will for ten cents in stamps, send his magnificent, fully illustrated catalogue, which is really a poultrybook in itself and worth fully a dollar,—all of which is crammed into a two-inch one column ad. As a result, the advertisement is so covered up that it is an offense to the eye of the beholder and receives very little attention.



The small sketch shown above was designed to show the value of simplicity in advertising. The strong contrast, arrests the eye, the balance of display lettering and type is pleasing and the spacing gives a clean, snappy, appearance to the design. It must be remembered that white spaces have great value in the makeup in the value of an advertisement. The writer has given some thought to these matters and anything that I can do for Everybodys advertisers, in the way of advice or suggestion, I will do gladly and without charge. It might pay you.

POULTRY BAND FREE

Our American BredTo-Lay **White Orpingtons Latest Sweep**

Ten firsts, 13 seconds and 5 thirds at the Great Hagerstown show, the Indiana and Kentucky State fairs just closed. This is proof positive that they are

RIGHT NOW READY FOR THE KEENEST COMPETITION

They are called by authorities "The best line of Males in the U. S." and the females are just as good. Line bred in America to Lay and Win.

I have hundreds of snow-white, big boned, deep bodied cocks and Cockerels. I'll sell you a bird to show and win anywhere; ship him in perfect condition, at a fair price. I can send you a pullet to win as easily, or a hen, or a pen. I have more than 1,000 real Orpingtons awaiting your orders. Write me.
WOOLERY FARM, Box E, Bloomington Indiana

Plymouth Rocks

Shall We Have Light or Dark Varieties—T. F. McGrew

IT was my privilege to have been selected by the Editor of the Reliable Poultry Journal to write a series of articles on the "Science of Breeding." These articles were published during the later part of 1898 and during 1899. We began this series by assuming that knowledge or experience in any branch must be considered from the point of success gained by the one who claims the advantage. It is quite useless to hope to benefit by words or statements that do not guide to improvement or success. It is doubly foolish to try to do that which is sure to bring disappointment. It is by far more foolish to follow a line of thought leading direct to obstacles that cannot be surmounted.

During the winter of 1897 we judged the American Classes at the Poultry Show, held at the Capital of the Nation. A pair of Barred Plymouth Rocks were shown there of such unusual good quality that they were selected as the model for a color plate that was used in the Reliable Poultry Journal of December, 1898. In writing of them, A. C. Hawkins, who bred them, said:

"No problem has been more difficult to solve by the American fanciers than that of breeding high class exhibition Plymouth Rocks. The material that was used in producing this breed at the beginning was such that the different sexes tended to follow in line from the first. The Dominique male was mated with Black Java female, and their progeny was the original Plymouth Rock. The pullets came dark in color, many of them black like the dam, while the males were light in color like the sire. The tendency is the same today in many flocks where the owners have tried to breed standard birds of both sexes from the same mating.

The beauty of a fowl is **what we see,** and while I am a believer in distinct, even barring under the surface, I do not want the bars so strong and heavy underneath that they destry the beautiful blue in the surface, and it is a fact that most of the specimens that are very strong in under color have a muddy black bar on the surface. It is also a fact that the very finest surface colored birds have not the strongest under color. The two qualities do not breed together males that are most attractive in the naturally, or in other words, those breeding yard and exhibition pen may not have the same strength in the underbarring as other specimens that are less attractive.

What I want and what any real fancier wants, is perfection in surface color and all the underbarring that nature will supply with it, and not, underbarring and as good surface as we can get with it.

In Part 5 of the series which was printed in February, 1899, I said without contending against anyone's opinion or the color of a Barred Plymouth Rock is its purity. The richer the color of the barring and the purer the light or white of the plumage, the more beautiful are the blendings. The almost white color so beautifully barred with the darker shade, as to give the blue and white shading, is the ideal color. We saw this some years ago in its closest approach, upon some females which were shown by Mr. Bunday at the New York Show, in the winter of 1885.

We gave special attention to these females: They were large size, most beautiful in color and marking, with under color rather light and indistinct in marking. Some of the same would be an object lesson in color today.

We might well repeat that those same females would be an object lesson if shown today. They had the real bluish color so much admired and sought after—which the fanciers of today would be glad to have on their best specimens. We wrote at that time that the beauty of surface color of the Barred Plymouth Rocks had suffered more in the past few years than any of us would like to admit. To substantiate the truth of these statements we need only at this time to turn to the columns of poultry journals, for example, the Barred Rock Journal, to find that these words of warning have lived long enough to see the fanciers themselves clamoring for either light or dark varieties, or specimens produced by single mating.

Show Room Education

It is almost twenty years since we began to write against the tendency to destroy the Barred Plymouth Rock. None were more opposed to my protest than some of those who are now advocating a return to single matings to produce them. We could not blame those who read what is written if they should ask, "What has come over the minds of these one-time ardent advocates of Double Matings for Barred Plymouth Rocks?" The answer must be that they have run to the end of the course and are stranded for lack of sales. They have gone on and on for narrow barring, barring to the skin and for a certain kind of color, till they have a kind that produces but few good ones—the greater part of all being black and gray.

In former days when Scudder was King of Plymouth Rock Alley, we enjoyed going with him—apparently to mark the book—in fact to hear his comments on the classes. It was at the 9th Madison Square Garden Show, held in February, 1898, that E. B. Thompson won all five prizes on Barred Plymouth Rock pullets. Mr. Scudder remarked at the time that the pulets were, in quality, five years in advance of the Standard. A few years later Mr. Scudder was detained by a heavy fall of snow; he could not come from his home to New York—Mr. Schwab was selected to finish the Barred Plymouth Rock classes. He pleased the exhibitors so well that from that time on, up to the death of Mr. Scudder, these two were the recognized authority on these classes. After the death of Mr. Scudder, Mr. Schwab was leader for many years.

Following close in line for this distinction has been C. A. Wells and A. C. Hawkins. So far as we know, E. B. Thompson has donned the ermine and wielded the sliding stick but once at the Buffalo Pan-American Poultry

YOUNG'S STRAIN S. C. WHITE LEGHORNS
I HAVE NO OTHER BREEDS
Acknowledged throughout the world as being the standard for all the Leghorns and the leading strain of heavy layers. They have been bred in line since 1883 for heavy egg production alone, and the show birds have simply been chosen from the layers. They are the only original line-bred strain of Leghorns in America today. Why not come to headquarters and get the best?
Hundreds of yearling hens for sale, and the grandest lot of Cockerels I ever raised that will improve your stock, both in exhibition and laying qualities. Mating list free. Address.
D. W. YOUNG **Box E-4** **MONROE, NEW YORK**

PITTSBURGH!
JANUARY 17th to 22nd, 1916 "The Best Bird Will Win"
The Poultry Exhibition of Greater Pittsburgh, Inc.
E. F. BALDWIN, Secretary Crafton Station Pittsburgh, Penna.

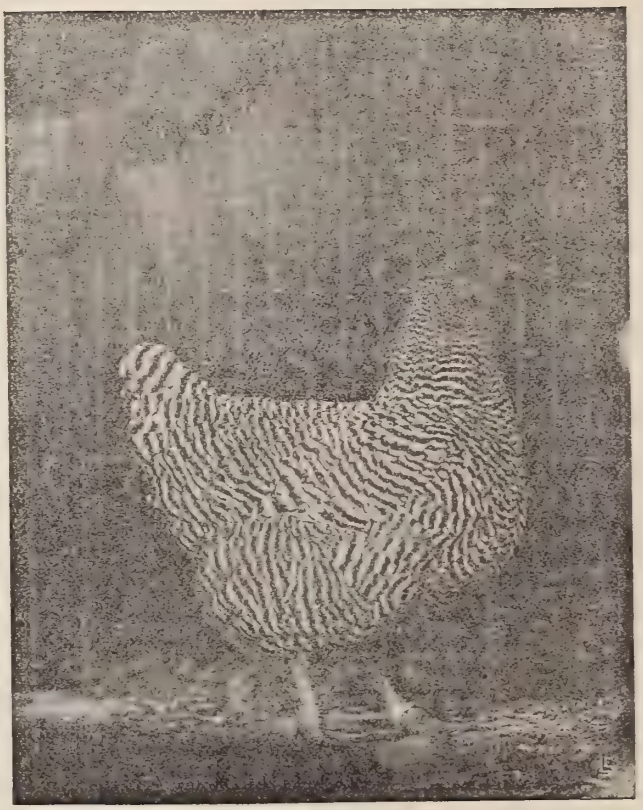
Show. All of these mentioned have helped to make Plymouth Rock history. They and many others have pushed along the Double Mating system to the extreme until now, when it seems some of them at least have experienced a change of heart, as evidenced by their own words. No one has bred more beautiful pullets of the Barred Variety than C. H. Latham, who in the Barred Rock Journal writes as follows:

The burning question of the day in Barred Rockdom is, "Shall we call them Light and Dark Plymouth Rocks, or have one variety and single matings?" That some radical change should be made at the earliest moment possible is very obvious. Breeding and selling them in the way we are doing today, obliges us to do business under a false front. They are not just what they seem to be to the novice and breeder of but little experience, who sees the two sexes in the show rooms having plumage color or alike in color, and who do not know that the two sexes cannot be alike in color when bred from one mating.

We are heartily glad that Mr. Latham has spoken the truth. How much better it would be for all concerned, if each breeder and each fancier would be more communicative to the amateur. No information on the subject can be wasted on the beginner. The best students in any school are those who were properly taught from the beginning. If started right they go straight along to success—if misguided at first they seldom if ever succeed later on. The true science of breeding the highest possible quality in fowls is the question of most importance. Herein lies the secret of success. In this subject as in any other, he who best understands the art is sure of good return for his labor; he who can help us to gain such knowledge has done much in our interest; he who misguides, harms beyond consideration.

Form is the most important part in the fowl. Form makes the breed—color the variety. All varieties of a breed should have the same form. Color should not in any way influence shape, which is the supreme guide of breed distinction. Stamp this well in your mind's eye and do not allow any other quality to attract you from true breeding condition.

While color is of great importance, it is more easily produced than shape and for this reason it should take second place. No matter how beautiful the coloring, the barring or the marking of the fowl may be, if it does not have true Plymouth Rock shape, it should not be considered as such. Yet it will be a Plymouth Rock if of Plymouth Rock form, even though the color and markings may be defective.



Unretouched photo of Princess Efficiency, 1st Chicago Coliseum Hen, Dec. 1914, also winner Barred Rock female championship same show. Note the beautiful contrasts in color. Bred and owned by O. B. Andrews, Box E, P. 303, Chattanooga, Tenn.

Present Needs

Please note that Mr. Hawkins called attention to the fact that "The beauty of the fowl is what you see." He wrote this over fifteen years ago and today not only Mr. Latham, but numerous club members say that Plymouth Rock breeders are doing business under a false front, while others clamor for two varieties. Again, let us quote from Mr. Hillard, of Pennsylvania, as printed in the Club Catalog:

"I am talking now to the breeders of the very best chickens for all purposes ever produced—the Barred Plymouth Rock, if this hoodoo, double mating, were removed! Give us what we ought to have—Light and Dark—what they are — Barred Plymouth Rocks, and see what will become of a lot of new breeds that are springing up all over the county. Other breeds have light and dark, why not us? Why keep two breeds of chickens to produce something that will not produce anything but something to produce culls?"

To have the fullest consideration of the subject let us add a few words from the Editional page of the National Barred Rock Journal:

Forget the fine feathers for a while and discuss yellow beaks and shanks. The Barred Rock was once upon a time bred with clear beak, clean yellow shanks and skin, but these have been largely sacrificed for deep barring.

Please don't become shocked, but when it comes to a change in the Standard for Barred Rocks, we would like to see on the committee, the proprietor of a poultry slaughtering establishment, the man who buys the poultry meat for a large hotel, and your wife or mother. They might not be crazy over deep barring, black tip, low tails, etc., but they'd advocate something of practical value.

We may well ask ourselves, "What does all this mean?" The only answer that can be given in truth is the one that had to be given for the obliteration of the Brahma and the Cochin.

From childhood, we have known the Brahma and the Cochin as prime favorites for exhibition, for market poultry and as egg producers. In boyhood days, we entered our Cochins and Brahmas against Leghorns, Polands and Spanish, in a neighborhood egg-laying contest. The Cochins won, with the Brahmas only a few eggs behind. During the same period, the classes of Cochins of three

varieties were well filled at the Indianapolis and Chicago Show. Brahmas were reasonably good classes here and very large in the East. These same were most popular in all localities as market poultry.

Thirty years ago this winter, we saw the Bunday Plymouth Rocks at the Madison Square Show in New York; directly following this the popularity of this variety began. From that time they have been prime favorites for exhibition, highly considered for egg producers and for market poultry.

From 1904 to 1906, we were constantly in touch with the heavy shipments of market poultry alive, into and out of Chicago. Three-fourths of all were Barred, showing either full or cross-bred fowls. Today not one-fourth of the shipped-alive poultry is of this kind, and why? Because the people and the poultry growers do not want them—they have found better, and your "Not Good Enough to Show," are a drug on the market.

You can fool some of the people all of the time, but only a few. Farming communities as a whole move slowly, but none the less surely—they have turned away from the Barred Plymouth Rock as they did from the Brahma and nothing but a masterly move will save the former from obliteration as market poultry. In such an event the only customers will be within the circle of exhibitors, who are likewise becoming dissatisfied and fewer all the time.

The Remedy

The remedy will be found in the application of good common sense. Remember, there are three principal factors for success common to all breeds and varieties—Shape, Size and Color. Two of these have been lost sight of in the craze, not for color, but for narrow barring to the skin. In proof of which you need only to read again the quotation we gave from the editorial of the Barred Rock Journal. If the breeders of this variety are content to show, breed and sell within the circle of a few they have their reward; if they want to broaden out—enlarge the circle to include the world, they must quit the close communion that admits only a few to the Blue Ribbon Class.

We doubt very much the ability of the breeders to turn the tide in their direction. The control of such things has been and will continue to be held by a few. To accomplish anything different from what you now have requires a more determined effort than has ever been marshaled for any breed. One man on the Revision Committee can do more than can or will your membership of a thousand breeders. In the meantime and while hoping against hope for other things, get busy and breed some winners.

How to Breed Winners

The chief factors for winning: Regular, narrow, parallel bars of equal width. You may read the Standard description—you may even commit it to memory; all of which, however, will not alter the fact that prizes are won in keen competition on Regular, Narrow, Parallel Bars of Equal Width. To have or to breed prize winners demands that you concentrate on this one thought—how to get such is the one question that should be of interest. The breeding of such barring might be classed as a mathematical proposition. About twelve years ago we visited the home of one who is now most successful in this line. He was then busy on the proposition. The result of his effort is now embodied in the Standard. All who win must conform to Standard Rule.

It is quite hopeless to look for success from matings other than those that have both males and females with narrow barring. A male with narrow barring mated to females that have wide barring will bring offspring the barring of which may be narrower than the barring of the females in the matings. They have matings for both such a mating will have barring of the kind that wins. The successful ones are ten years in advance of such matings. They have matings for both males and females, all of which have the most modern type of both barring and color type. To compete, you must have matings of the same kind; otherwise you will produce the kind that go to the show and come away unnoticed.

The time is ripe for some one to demonstrate that they can breed from a single pair both males and females of beautiful form and color. The next revision of the Standard is eight years away—the work can be completed by that time. To do this, however, demands work—not words. How to do it is the question. Some claim that the foundation for such work will be found in the clear, narrow-barred cockerel-bred females. This might do for a beginning, provided a male of proper color-type were used. We would favor two matings for a beginning and would later merge them into one.

We would select hens of the cockerel line in their second year, as clear and as narrow-barred as it is possible to find them. We would mate some of them with a cockerel-bred male, clean, clear and narrow in barring—rather lighter in shade than is usual. With others, we would mate a pullet-bred male, selecting one that has strong barring and as narrow barring as can be had. We would trap-nest all the hens, toemark all the chicks and be sure that we would tell the sire and dam of every chick.

For the second year mating we would select the best of each mating and mate some of the pullets of each with their own sire and the best cockerel from each mating with the hens that had produced the best offspring. By following this plan year after year the style most desired could be developed the same as has the present kind.

A MERRY CHRISTMAS TO ALL TO EVERYBODY

At Christmas play and make good cheer,
For Christmas comes but once a year.

* * *

Remember your neighbors and friends with a present of a year's subscription to "Everybodys." They will thank you.

* * *

Intentions, like eggs, spoil unless hatched.

* * *

Philadelphia's tenth Anniversary Show will be held in a large, new and well lighted hall. Don't miss this great show.

* * *

Good business ads and literature create interest first, then business.

* * *

7143 paid in advance yearly subscriptions were received during September. We will print 50,000 copies or more monthly for the future. It's time you were with us, Mr. Advertiser.

* * *

The efforts some Barred Rock breeders are making to get into print with their light and dark variety notions are silly. The Barred Rocks are all right as they are and more popular than ever.

* * *

Relative to the report that a man up the State shot a white woodchuck, we think now is the appropos time to ask if anybody has missed a white Angora cat.

* * *

Hagerstown was a great show, quality never better, but still many of the old time fanciers and breeders were missing. The speciality breeder was conspicuous by his absence.

* * *

The management of every association should know the judges who are capable and are desired by their exhibitors and engage them, and not leave this important duty to any man to brag over.

* * *

It was pleasing to again meet Geo. E. Howard at Hagerstown. Mr. Howard has always been prominently connected with poultry and for years was editor of "The Feather". He is now connected with the Star Remedy Company, Washington, D. C.

* * *

"I want you to understand," he said, addressing his 17-year-old son, "that I am still the boss in this house!"

"All right, dad," the boy replied, "but you're a coward to make the boast behind mother's back."

* * *

We are still thinking of that "Regal" exhibit and record win. We can see how John S. Martin does it. Wonder where he will hit next? The ribbons await him.

* * *

"Pop, what is a monologue?"

"A monologue is a conversation between husband and wife."

"I thought that was a dialogue."

"No, a dialogue is where two persons are speaking."

* * *

Bryan is thankful that the Colonel is not President. The Colonel is thankful that Bryan is not Secretary of State. Fifty-fifty. We are all very thankful that neither holds office. Hundred-to-nothing.

* * *

The dye is cast. Now the breeder and exhibitor Judges are to get theirs, but don't worry "Boys," as this like the Solicitor-Judge matter will also be founded on supposition only. No dog can bite without teeth.

* * *

There is a question among Hanover friends whether Jas. T. Huston would be a safe man to send after turkeys. The Buzzards in that section, according to his notion, resemble the turkeys very much. We fear he would panhandle one of those on them instead.

* * *

Let me introduce to you our artist, S. Edwin Margaret, Jr., Cranford, N. J. We are now again in shape to care for your wants in illustrations of your birds, special advertising designs, catalogues, etc., with promptness and satisfaction.

* * *

By the time this is read, the Winter Show season will be on. Have you done your share? Show your birds and attend the exhibits. Make your start this season, if you win, advertise; if you don't—try again.

* * *

Poultry Success depends as much on condition as on breed.

Better to cull the drones than to stunt the profit makers in room or food.

* * *

There is a great difference between words of merit in advice and words uttered in the spirit of fault-finding. The one is constructive, the other destructive.

* * *

Trap-Nested Hens

Estelle E. Collier

THERE is no disputing the fact that the trapnest for hens is the only system by which a breeder of poultry has complete control of his flock from one year's end to the next; able to pick out every profitable and unprofitable fowl and turn off on the meat market all the fowls that are a failure from an egg-laying standpoint. It is foolish to say that to trapnest a large flock, that is to say, a flock large enough to support a poultry plant without investing outside capital, doubles the work. It more than doubles the work. It is so different that to have a mere poultry plant with regular feeding and the cleaning of houses and the daily round of inspection is child's play beside it.

One of our most enthusiastic breeders in the State of Washington, and one of the most successful, is a man who runs a plant of some three thousand birds, fifteen hundred of which are trap-nested pullets. This man carries the best possible White Leghorns, his yards covering about five acres of his twenty acre farm. The breeding houses are mostly connected with 75 to a yard, (with 25 trapnests in each.) No water is spilled to make the quarters damp, causing roup or colds. The water jars are placed on platforms high enough and so firmly fixed that the fowls cannot turn them over, and wire racks are placed there for green food, cabbage, kale, etc. The trap-nests are arranged along the back of the house about three feet above the floor making it easy for the person inspecting the nests to see into them and to take the bird from it.

All the houses have all open fronts which are wide enough to keep the birds from having chills and frozen combs in severe weather. The climate out here on the coast is such that there are very few days or nights during the coldest winters that will freeze anything, but the blood of people and animals, in such a climate, becomes thin, so that the cold spell that would be merely chilly to an Easterner during their winter months, would freeze us into a sick bed.

This Washington breeder is a man who has had one limb amputated. His extreme height makes it very difficult for him to get around. In fact he cannot go from one place to another on his farm or in his house without the help of some one. His wheeled chair takes him everywhere. With the help of his wife, who is indefatigable in her efforts to help him day or night, and a men to do the cleaning of the houses and a man to whom he pays $85 per month to care for the trap-nested hens, this breeder has run his large plant with the greatest possible success for over ten years. He has certainly tested the value of the trap-nest and proved its worth.

This man proves the theory that a successful poultry plant is one that will pay well enough to give a net profit over and above the pay roll necessary for the running of the plant and the feed bill of the flock. Many poultry breeders say that because the feed is so high there is no profit in their flock this year. No such argument, however, goes with this breeder. He feeds the best of food to get results, and never allows the flock to go a single day without its regular ration of green food and the regulated ration of grain.

In a period of ten years this gentleman has never varied from his original plan to get the best results to be had with the best food and care, with a capacity only as large as can be handled with the help he can personally overlook. He found that one man can handle twenty-five hundred females and give them every care, but if the flock is greater than that, extra help is necessary, an attempt which is beyond the ability of one man to oversee. That is the great difficulty about the poultry business. It is human nature to neglect the details and from his wheeled chair. He is a brilliant man personally, one with whom to watch the details from day to day. Hired help is never so conscientious that a boss is unnecessary. What one man will do successfully two or more men may not, though there are always exceptions.

The point is this: With trap-nests and the extra expense necessary to run them amounting to over a thousand dollars a year, the overhead expense per hen raised through the extra cost of putting in the nests, this breeder manages not only to meet all expenses of his ranch but nets an average income per year of fifteen hundred dollars. This living is not made in a city back yard or on a lot or two. This represents much hard, consistent work. It means that during the hatching season this man's wife must get up to watch the incubators at least twice, each night. She must be ready with the brooders to care for chicks that hatch out in hundred and thousand lots. She must, under her husband's supervision, help the man in charge to pack and ship these chicks to fill the orders for "Day Old Chicks" and those that are left, hundreds of them, each hatch. She must, with this one man's help, watch those chicks in the brooder houses both day and night, while they are delicately alive to the influence of artificial heat. Never for a minute is the brain of the helper asleep while the demand for watchfulness is as constant as it is during the hatching and brooding season.

No man, with two strong legs to walk upon, ever gave more constant care to his flock than this man gives the proprietor only feels the incentive

A pair of U. R. Fishel's, Hope, Ind., "World's Best" White Plymouth Rocks

it is a rare treat to converse and his talents are not of a plebian quality. His home is filled with works of art and treasures picked up on his travels. He has always been a favorite among those who know him and the greatest favor he can bestow is to reciprocate an interest.

In each of the laying houses is a chart. The mature pullets are put in the houses and banded when they lay their first eggs. Thus the chart increases in length as the flock lays more eggs. Every hour or two the man goes the rounds and takes the hens from the trap-nests. Each day in each month is recorded on the chart in each house and the leg band number of the layers only goes on those charts. You can look back over ten years and see the egg record of every layer, where the eggs from certain "Best" layers have been kept separate, a method which is possible only where the trap-nest is used; you may trace the egg laying quality through several generations. In this way it was found that a hen of heavy egg yield never produces a daughter as good but the "Get" of her cockerels will produce the best layers in any flock.

From fifteen hundred pullets the Washington breeder produced one hundred and fifty-four pullets which laid more than two hundred eggs in one year, and forty pullets which laid two hundred and forty eggs. One year he produced a hen which laid two hundred and ninety-five eggs in a single year and another in another year, which produced two hundred and eighty-six eggs. How does that compare with the hen which won the egg-laying contest on two hundred and eighty-six eggs?

The eggs from this farm are gathered and packed every night for shipment on an early train to the restaurants in nearby towns. The trade has been steadily building upward because the eggs from this ranch are graded very carefully as to size; they are always clean and always fresh, never reaching the restaurants more than a day old. This man gets five and six cents above the retail market price because of his reputation for the best that hens can produce.

Every year this gentleman pays a licensed judge to look over his flock and pick out the culls, also the best birds according to the American Standard of Perfection. Many a time at the Coast shows these birds have won the blue ribbons, birds which were chosen from the flock at large with no other grooming or conditioning than the rest of the flock enjoyed. That is adhering to the real idea of breeding for the fancy. To get a flock built up of the best so that the best can go out and win in competition with the best groomed birds from any other fancier's yards.

This breeder never allows a bird in his yards that has a disqualification, and never allows a pullet in the flock if a poor egg-producer, regardless of how near the Standard. The result is that the strain he carries is consistently a good egg-producing strain and few there are that will not pass muster according to the Standard of Perfection, the guide of all true fanciers.

Last season he sold seventy-two cockerels to one man and fifty-four to another, and one part of the contract was that no cockerel should weigh less than four pounds. He found no trouble in doing so as most of his cockerels weighed on an average of four and a-half pounds by November.

I withhold this breeder's name as this is merely to advertise the true value of trap-nests to the fancy and utility breeder as a financial venture proved by ten years experience with them. This man sold thirty thousand chicks last year and now has six hundred cockerels that will go on the market as breeders, but he has never been able to raise enough pullets to supply the demand. He recently sold four hundred pullets to one man and turned down more orders than he filled this year. The fertility of the eggs from his trap-nested hens this year was so good that he raised more pullets than he expected to owing to the fact that he booked his orders on an estimate of seventy per cent., and his average was over eighty. Every year he books his capacity and then cancels all orders over.

This man, who has used the trap-nest for ten years, and still has his faith unimpaired either in the poultry business from a utility standpoint or as a fancy, has found that the trap-nest system is the only system that pays and the only one with which one can control the personnel of the flock. Know and study each bird and what each bird produces from one year to the next and on "unto the third and fourth generation!"

During all the years of his experience he has never allowed one week to pass in which the system of feeding was altered from the studied ration found to be the best to bring good results. Results are always what he strives for and what he demands in fair weather and foul and in good times of low-priced food and times when food is high. He finds that regardless of price of feed and low markets, his system always nets him a good income each year with an order-book making new demands on his powers of production.

One good feature of the trap-nest that all breeders of good birds will appreciate is that a record can be kept of all birds that are needed for special breeding privileges. The bird that lays well and shows marked beauty over the rest of the flock or marked

defects can be tested out through several generations and conclusions reached that would be unimpeachable. For instance, if you have a bird whose egg-record is phenomenal and her beauty unimpaired except for some defect that you would like to test out as to its being hereditary, you can find out in the next generation to a certainty and know when that defect shows up that you must eliminate such fowls from the flock regardless of egg-record or beauty, shape or coloring. When a defective hen enters the trap-nest her eggs can be marked and kept as well as a mere record of the number of eggs laid. Especially fine hens when trap-nested can give the breeder a flock bred from the best of the flock.

This was tried out with our Black Langshans. One of the best layers of the flock and the finest specimen in the flock, that won first at every show on the Coast where she was exhibited, developed a tiny sidesprig the second summer, a mere button of a side sprig not larger than a pimple an eighth of an inch across. Not another of the flock showed a sign of such a defect. To our surprise that Summer we had a bunch of youngsters with sidesprigs. We thought at first that they were throw backs" and paid no attention to that pimple on the comb of our fine Langshan hen. That winter she passed through the hands of Theo. Hewes, that famous poultry judge, at one show, with a blue ribbon and also won a blue ribbon from Judge Holden, of Ottowana, Minn. The following Summer we saved every egg from this hen and set twelve under one hen, all the eggs hatching. Out of those twelve chicks we had eight with sidesprigs big enough to hang your hat on. From that day to this we not only look for definite sidesprigs, but kill every chick of broiler age that shows a sign big enough to be called a pimple. The trap-nest is the only method that will effectually cut down the number of birds with disqualifications. Experience proves to us that instead of decreasing, they are ever on the increase if allowed to run through the flock. Unless something is done every year a breed of mongrels claiming the distinction of purebreds, would soon result.

Any system followed must be continued through a period of three or four years to prove anything. The trap-nest used only during the Spring or during a single year proves nothing, as the conditions of one year will differ materially from those of other years, just as the birds differ from one year to year in their development and egg laying capacity. It is the average that counts always.

The Fancier's Fowl

John A. Gamewell

"Nothing is More Becoming Than to Despise the Advice of No Man"

I HAVE decided with the co-operation of some of the show superintendents, poultry editors, and real fanciers to bring the Golden Penciled Hamburgs before the public, so that they will be appreciated and bred by those persons who admire a variety from an artistic standpoint.

So far I am disappointed in the lack of interest that has been manifested, but possibly, and I hope so, some of the breeders of this variety, maybe "laying low" and just waiting for the shows to exhibit what they have.

I am a novice in breeding this variety and I am seeking all of the advice I can get and will visit all of the shows I can to try and learn what the best specimens look like and the manner to mate them in order to produce fine specimens.

The color description of this variety as far as the female is concerned is wrong, or else the birds I have already seen exhibited are incorrectly bred and the ones I have are not Standard specimens.

It is unfortunate that such a beautiful variety should be so sadly neglected that a Standard can be issued with no illustration when one is surely needed in a variety of this nature and an incorrect color description given.

I am rather disappointed that up to the present time no replies have been received by me from the breeders or prospective breeders of this variety.

However, I am in hopes that the interest will assert itself very forcibly as soon as the fall and winter shows start and some of these beautiful birds are exhibited.

I shall do everything that I can and will exhibit at three or four places and shall offer a silver cup at each place for the best display.

Personally I do not know whether the few birds I have are good enough to win, but I shall find out very shortly by entering them for competition.

Fifteen birds of a variety like this in such a show as Syracuse had this year is not a very creditable showing.

I only have a few young ones and if they had been more fully developed would have shown them, but you can be assured I shall be there next year and hope that there will be one hundred and fifty to compete against me.

I am going to exhibit at Red Bank, The Palace, Madison Square Garden and Boston, so come along and let us see who is who. I am a good one and while you may trim me in our first encounter, I'll persuade you that by this time next year I'll know more about them and you will not find it so easy.

Mr. Cleveland has kindly invited the breeders of this variety to meet at the Garden to organize a club, and we hope that you will be there.

The Hamburg Club, which we understand includes all of the varieties, meets at Boston, and Mr. Atherton kindly invited me to attend, so I hope that as many as possible will be there.

As both Mr. Sewell and Mr. Atherton said to me at Syracuse, if you can only revive the interest in this variety, it will appeal, particularly to the business men, who want a "hobby" and especially to those who have a profession.

So here we go for a long pull, a stong pull and a pull altogether, for the Fanciers' Fowl, the Golden Penciled Hamburg.

When writing advertisers, mention "Everybodys." Thanks.

RED SUSSEX

Egg prices reduced this month. Sussex chickens have been hatched in the fall for years in England, to be ready for the fattening sheds the following spring. When given a place by themselves the birds grew rapidly. I usually have some of all values for sale at reasonable prices. Some utility yearlings at this time. Late chickens of this breed do unusually well. Booklet free.

IN THE GOOD OLD DAYS

Under this head we will monthly publish a select line of articles published years ago that are of special interest to the breeders of this age. We also ask for contributions for this department either in books, Poultry papers or in manuscript form.

VIGOR OF CONSTITUTION

(The Poultry World 1872)

The accumulation of as much vitality and vigor as possible in feathered stock should be studied by all breeders, especially by those who breed on a large scale. And yet this is a point to which very little attention is paid, the consequences, however, of this neglect being obvious enough in the losses which are incurred from epidemics of various characters. Breeders generally calculate only for "fairweather" the problem which most of them being to proportion the care given to their stock so nicely to the immediate return in eggs and weight that nothing shall seem to be lost. But it results from management such as this that the stock becomes gradually enfeebled or at least has no surplus strength, and any extraordinary trial such as an epidemic carries so large a number as to seriously diminish the profits. Who has not heard the liability of this sort, "which are not to be anticipated," urged against attempts to render the poultry yard an important part of general farming? But such crisis can be both anticipated and to a great degree neutralized, by paying due attention to the health of the flock during times when no particular disease is prevailing. The present system is much like building an ocean steamer that could just keep afloat in calm seas.

Every student of social history well knows what science has done for the health of the great cities of Europe. During the middle ages, when partly from ignorance of the laws of hygiene and partly from a superstitious neglect of the indication afforded by those laws, the cities were illy drained, filthy and crowded, every epidemic made terrible ravages, the plague and low fevers frequently made frequent and desolating visits. But in modern times, since all these matters have been provided for, such visitations have been either entirely prevented or their severity greatly diminished. New York, owes probably her present immunity from cholera to the thorough sanitary measures of her Board of Health.

There is no mystery about the matter, nothing approaching to a potent idea, to an all powerful "Plantation Bitters" for the gallinaceous race. Fresh air of the right kind, light, abundant food, properly varied, pure clear water, all these methods are as simple as they are soverign. One of the most common blunders will be overcrowding, at least in establishments where many hens are kept shut up. Every hen needs at least 400 cubic feet of room in a close pen. Birds of all kinds consume more oxygen in proportion to their size than do men. As to the effluvia from stables and manure heaps there can be no doubt of the fact that the hen has undergone an acclimatization, rendering her somewhat susceptible to these theoretically so noxious influences, but large accumulations within the building itself, are either to be avoided by frequent cleaning, or to be neutralized by the use of finely powdered earth, a substance that absorbs the effluvia and at the same time preserves the fertilizing qualities of the manure in a shape most advantageous for economical uses.

Fully as much stress is to be laid on the value of bright sunlight. Never put the coops in a locality that is always in the shade. Every ray of sunlight is, besides its light and heat, accompanied by a ray of active chemical force, that is essential to the health of man and beast. Winter and summer your fowls must have access to it. See how glowing their air of content as they shake themselves in its genial warmth, yet the value of it is not to be measured by a thermometer, neither can artificial heat supply its place.

* * *

CHARCOAL FOR POULTRY

Poultry World, 1873

The benefit which fowls derive from eating charcoal is, I believe, acknowledged. The method of putting it before them is, however, not well understood. Pounded charcoal is not in the shape in which fowls usually find their food, and consequently is not very enticing to them.

I have found that corn burnt on the cob, and the refuse—which consists almost entirely of the grains reduced to charcoal and still retaining their perfect shape—placed before them, is greedily eaten by them with a marked improvement in their health as is shown by the brighter color of their combs, and their sooner producing a greater average of eggs to the flock than before.

* * *

HEN'S TEETH

Poultry World 1872

"Scarce as hen's teeth." This is an old saw. Yet you should see to it that your fowls are possessed of good teeth. Not natural ones exactly, neither artificial ones, but natural stones with which they may triurate stones with which they may triturate the food to their gizzards. Hen's teeth comprise no incisors, nor canines, but are good grinders. The flatish or scaly gravel is not suitable, but a form approaching the spherical is to be preferred. If your neighborhood is not gravelly, blocks of granite or quartz may be reduced to irregular angular fragments, which are excellent. Shells of the quahog or round clam pounded, serve the double purpose of grinding and affording a supply of lime for the formation of egg-shells and on this account are better than oyster shells.

IMPERIAL RINGLET WINNERS OF EVERY FIRST PRIZE AT MADISON SQUARE GARDEN, NEW YORK, FEBRUARY, 1915.
FIRST PRIZE COCKEREL AND CHAMPION MALE. FIRST PULLET AND CHAMPION FEMALE
FIRST PRIZE COCK. FIRST PRIZE HEN. FIRST PRIZE PEN COCKEREL.
OWNED BRED AND EXHIBITED BY E. B. THOMPSON, AMENIA, N.Y.

The above picture shows the wonderful winners of every first prize offered on Barred Plymouth Rocks at the last great Madison Square Garden Show, February 1915 These birds are owned, were bred and exhibited by E. B. Thompson, Amenia, N. Y. It requires no taking of liberty with a single fact to make this stand forth as the record of an achievement without parallel in the history of the Madison Square Garden Show.

The Great Hagerstown Fair

A Large Entry of Finest Quality Birds, Barred Rocks, White and Silver Wyandottes, White and Buff Orpingtons and Leghorns, Feature Classes—H. P. Schwab.

ANOTHER Hagerstown Fair has passed into history, and while total entries were short of those of the past two or three years, still there were close to 6,000 birds shown in all departments, making a display very complete and of extra fine quality in most every breed and variety.

Still there was something missing, some of that original fancier's spirit that had its birth in Hagerstown many years ago. The specialties, to some extent, were missing, a condition that should not exist; and one that can now be rectified. This year, also, fault was found with some of the judging; and there was good reason for a share of this at least. These are trifling matters that can and will be remedied before the next show. We all love Hagerstown far too well to overlook its few errors. We want to see it greater than ever and feel assued that its future is now brighter than ever before; the conditions as they exist, are known and improvements will be made.

"Scotty" Bowers was there to greet all as usual. He is the "Original Mixer," the one upon whom the poultry interests rely with every confidence. He was on hand at all times to smooth out the wrinkles, to boost, cheer up, and drive away the grouches. Old Hagerstown without "Scotty would only be a pleasant memory.

The Banquet, as usual, was an event of special interest. The Honorable Judge George O. Brown, was seated with the ladies, while Messrs. Charles D. Cleveland, assisted by Colonel Louis P| Graham and "Scotty" Brown gave an original Vaudeville sketch that took well. This year also a Lady Singer (whose name we do not know) sang several selections that were a real treat, fully enjoyed by all.

THE BREEDERS AND CLASSES

Light and Dark Brahmas and Cochins in all varieties have always been strong classes here. They and the Langshans were particularly so, this year. Birds of type and color, with good conditions, were prominent.

Barred Rocks were quality birds all through. The winning Cockerel, Hen and Pullets fit to win in any show. First Cock, a grand, good bird, sound in every way.

C. Guy Myers, Siddonsburg, Pa., who won strong at Allentown, and other shows, won Cocks 1-2-3, Hen 5, Cockerels 3-4, Pullet 4. Old Pen 2.

O. B. Andrews, Chattanooga. Tenn. whose "Efficiency" ctrain is a leader, won Old Pen1, Hen 4, Cockerel 2. This is the first time we have seen this line. Hope they will come East again.

Lester S. Birely, Thurmont, Md., won on Cockerels 1-5, while E. A. Grove, Limekiln, Md., won Pullets 3 and 5.

C. N. Myers, Hanover, Pa., with his "Lady Beautiful" strain made an unusual record by winning in Hens 1-2-3, Pullets 1-2, Pullet-bred males, 1-2-3-5

Buff Rocks, a rich beauty class, grandly shown. First Hen, one of the best ever shown, absolutely sound in color, even in all sections, fine size and shape, and flaming red eyes. First Pullet, also one of unusual beauty. The winning males, sound and good. Vierheller Bros., Pittsburgh, Pa., won Cock 3, Hen 1-4, Cockerel 3, Pullet 1-5, Old Pen 1, Young Pen 1. Best Display, etc.

J. H. Hertz, Hanover, Pa., won Cock 1, Cockerel 1, Pullet 3-4.

In Partridge Rocks, J. H. Roth, McSherrystown, Pa., won Cock 3-4, Hen 2, Pullet 1-3, J. C. Myers won Cock 1, Cockerel 1, Pullet 4-5, Young Pen 1.

John F. Mackay, Bordentown, N. J., made an excellent winning with his several varieties as follows: Partridge Rocks, Cock 2, Cockerel 2, Pullet 2, Old Pen 1, Young Pen 2. Silver Rocks, Cock 2, Hen 1, Cockerel 1, Pullet 1, Pen 1. Columbian Rocks, Cock 3, Hen 3, Cockerel 3, Old Pen 1, Young Pen 1.

White Wyandottes were a champion class, with John S. Martin exhibiting and making a record that surpasses any ever made in this class at this show. Although we have seen his birds at home and in the show room for years, his exhibit here was a revelation to us, as it must have been to many others. His winnings were Cocks 1-2-3-4, Hens 1-3-4-5, Cockerels 1-2-4-5, Pullets 1-2-3-5, Old Pen 1-2, Young Pen 1-3. Mr. Martin also won the Sweepstake Championship Cup, for best bird in the show.

Sliver Laced Wyandottes, always a strong class here, with winners a superb lot. W. D. Kinsell, Hanover, Pa., won Cock 3-5, Cockerel 3, Pullet 2. R. F. Alden won Cock 1, Hen 1. Dr. F. H. Charmbury, Hanover, won Cockerel 1.

The Sheffield Farms, Glendale, Ohio, won on Partridge Wyandottes, Cock 1-2-4, Hens 1-2-3, Cockerels 1-2-3, Pullets 1-2-3 Old Pen 1-2, Young Pen 1-2.

The Wilburtha Farms, Trenton Jct., N. J., made a record on all birds exhibited here. This line is famous for its winnings and quality as their records of this season at the New York State Fair, Trenton, etc., prove. Here they won in S. C. White Leghorns, Cock 1-2-4, Hens 1-2-3, Cockerels 1-2-3, Pullets 1-2-3, Old Pen 1-2, Young Pen 1. In S. C. Buff Leghorns, Cocks 2-3, Hens 1, Cockerel 2-3-', Old Pen 1, Young Pen 1. In S. C. Reds,

PAPE'S SINGLE COMB BLACK MINORCAS

Are maintaining their reputation as the most profitable EGG laying and Prize Winning Strain in America.

They met the test at this year's American Royal Live Stock Show and won: 1st and 4th Cock; 2nd and 4th Hen; 1st, 2nd, 3rd Cockerel; 1st Pullet; 1st Old and 1st Young Pen.

At Kentucky and Mississippi State Fairs in well filled classes, they were surpreme-winning all first prizes, all but one second and all thirds besides American Poultry Association Gold Medal at Mississippi, for best Cockerel in the show.

Am offering immense yearlings and 1915 hatched exhibition quality birds, ready to win anywhere.

Cock birds and Cockerels that will improve any flock. Catalog and assistance free.

"Hens and Pullets laying, on approval and Eggs for Hatching at introductory prices."

CHARLES G. PAPE

Box D 74. Fort Wayne, Ind.

S. C. BROWN LEGHORNS

Let others magnify their winners as they may. The fact remains that I am furnishing more winners for the big shows than any breeder east or west. Read this. At Milwaukee, Springfield, St. Louis and Louisville I furnished 14 of the blue ribbon winners for 1915 and 22 other birds of my breeding were in the money. At the great Indiana State Fair in competition with 65 of the best browns ever shown here I won 5 firsts, 2 seconds and three thirds. Great Coliseum Show, Chicago 1914 seven firsts. I have won at Indianapolis, Madison Square Garden and many other big shows.

If You Want Quality Come To Headquarters.

H. F. RIKHOFF, 528 Occidental Bldg., Indianapolis, Ind.

Cock 1-5, Hen 1-2, Cockerel 2-3, Pullets 2-5, Young Pen 2.

The Hilldorfer Black Minorca Farms, Saxonburg, Pa., whose birds have been seen for over 20 years, won on S. C. Black Minorcas, Cock 3, Hen 4, Cockerel 1, Pullet 3-5, Old Pen 2, Young Pen 1. In S. C. Reds they won Cockerel 4. In R. C. Reds, Cockerels 1-2.

Buff Orpingtons surpassed any class we have seen here for eveness of quality. Every winner was a most worthy bird, well shown and seen at their best. Head points particularly fine. First Cock and Cockerel of special merit, real beauties. In this great class the Sunswick Farms, So. Plainsfield, N. J., more than repeated their late win at the New York State Fair by winning Cock 1-2-3, Hens 4-5, Cockerels 1-2-3-5, Pullets 1-2-4, Old Pen 1, Young Pen 1. This First Cockerel ran a close race for highest Show honors.

The Old Forge Poultry Farms line of Buff Orpingtons that are noted for their laying qualities have also been consistent winners this year. Here they were awarded Cock 4-5, Hens 2-3, Cockerels 4, Pullet 3. Old Pen 3, Young Pen 2.

Rawnsley Shields Co., Columbus, Ohio, won on Buff Orpingtons, Hen 1. On Speckled Sussex Cock 1, Hen 1-2, Cockerel 3-5, Pullet 3-4, Old Pen 1, Young Pen 1.

In S. C. White Orpingtons, it was a battle between two Western "Giants." The class in every department was a strong one and great credit is due to both these lines. The Mount Airy Poultry Farm, Powell, Ohio, won Cock 1, Hen 1-3, Cockerel 1-4-5, Pullet 1-3-4, Old Pen 1, Young Pen 1.

The Woolery Farm, Bloomington, Ind., won Cock 2-3, Hen 2-5, Cockerel 2-5, Old Pen 2, Young Pen 2. This valued line we have mentioned before in our Indiana State Fair report.

In Speckled Sussex, Howard L. Davis, Egypt, N. J., won Cockerel 1-2-4, Pullet 1-2-5, Young Pen 2-3-4. If Mr. Davis can make this breed as popular as he personally is, they are sure to boom.

Messrs. George H. Kitchen & Son, Hanover, Pa., have made two grand records this season with their S. C. Buff Leghorns. Here they won Hen 3, Pullet 5 in a very strong class. At Hanover they won Hen 1, Pullet 1, Pen 1.

Charles McClave, Naw London, O., exhibited his full line in several classes and won well in all.

Black Minorcas were one of the quality classes of the show. The first Cock, a rare beauty of extra form and the best of color. R. H. Anderson, Lynchburg, Va., won Cock 1, Hen 1, Cockerel 2-4, Old Pen 1.

The Pratt Experimental Farm, Morton, Pa., won Cock 2, Hen 5, Cockerel 3, Pullet 1-4. They also won well with their Water-Fowls. In R. C. Black Minorcas, they won Cock 1-3, Hens 1-2, Cockerel 1, Pullet 1-2.

Blue Andalusians, another rich quality class, with the best Hen we have ever seen, winning Second prize. V. H. Council, Warrenton, Va., won Cock 1-2-5, Hen 1-2, Cockerel 1-2-3, Pullet 1-2. E. D. Bird, Greenwich, Conn., won Cock 3, Hen 3-5, Cockerel 5, Old Pen 1.

Anconas, a fair-sized class, winners good.

W. C. Black Polish were seen at their best, a simply grand class of birds. Other Polish also fine.

Hamburgs a complete display.

Houdans not strong in numbers, some good birds.

Dark Cornish, a large, fine class, the winners as good as any seen this season. Also many fine White and White Laced Red Cornish here.

Games a large and beautiful display.

Bantams, particularly in Cochins, Polish and Seabright were strong classes.

Pigeons were a full and complete entry.

Ducks in all varieties and in strong classes were a feature exhibit. It is seldom a display is seen to compare with this.

Geese were also good and seen in large numbers.

Turkeys very fine.

Now let the Fanciers and Breeders work for a "Greater Hagerstown" Show in 1916. Let's revive that Fancier spirit of the John L. Cost days. It is not gone, only partly covered up by the machinations of a very few.

REMARKABLE WINNINGS AT THE BIG EASTERN FAIRS

Judging from the number and quality of the birds exhibited at the fall Fairs, this will be a big year for poultry shows. Exhibitors and judges alike report that the number of birds shown at the leading Fairs this fall has been unusually large and the average quality remarkably high. This fact must lend encouragement to all breeders and exhibitors of standard bred fowls, since it proves that public interest in fancy poultry is not waning.

At some of the Fairs which are especially notable for their poultry shows many of our leading fanciers exhibited fine strings of birds and because of the keen competition all who were fortunate enough to win ribbons have every reason to be proud of their success.

Most of our readers are aware of the fact that the Pratt Food Company, of Philadelphia, maintains the Pratt Poultry Experiment Station for the purpose of conducting experiments in the breeding, feeding and housing of poultry, the prevention and cure of poultry diseases, and other problems which so vitally effect the industry. It may not be so generally known that considerable work in the breeding of exhibition fowls has been carried on at this institution. That this work has been well done is clearly demonstrated by the winnings of the Pratt Poultry Experiment Station birds at three of our leading eastern Fairs. A list of awards as secured by the Pratt strings is given below.

At the West Chster Fair, 9-15-18 the following prizes were won:—

S. C. Black Minorcas—Cock, 1-3; Hen, 1-3; Special, best Minorca in show.

R. C. Black Minorcas—Cock, 1; Hen, 1.

Rhode Island Reds—Cock, 1; Hen, 1; Specials, best Red and best Red hen in show.

Barred Plymouth Rocks—Cock, 1; Pullet, 1; Special, best Barred Rock in show.

White Wyandottes—Cock, 1; Cockerel, 2; Pullet, 2.

White Plymouth Rocks—Cock, 2.

Pekin Ducks—Old drake, 2-3 Old Duck, 2-3; Young drake, 1-2; Young duck, 1-2.

White Runner Ducks—Oid drake, 1-2; Old duck, 1-2; Young drake, 1-2; Young duck, 1-2.

White Chinese Geese—Old gander, 2; Old goose, 1-2; Young gander, 1-2; Young goose, 1-2.

The great Allentown Fair, 9, 21-24, in particularly keen competition these birds made the following records:—

R. C. Black Minorcas—Cock, 1-2; Hen, 1-2; Cockerel, 1; Pullet, 1; Pen, 1.

S. C. Black Minorcas—Cock, 1; Hen, 1-2; Cockerel, 2; Pullet, 1; Pen, 1.

White Chinese Geese—Four firsts.

Young Pekin Duck—Cup for best waterfowl in show.

In the laying-type classes, where emphasis is laid upon business ability, firsts were won in each case by individuals of the following leading utility breeds:—S. C. Leghorns, Barred Rocks, White Wyandottes. First was also awarded on English White Wyandotte pen and American White Wyandotte pen.

The Hagerstown, Maryland, Fair is particularly noted for its Poultry show and the winnings there made are usually a fair index of what may be expected at the winter shows. This big exposition was held Oct. 12-16, and the Pratt birds took home the following ribbons:—

Special—Best Black Minorca, both R. C. and S. C.

R. C. Black Minorcas—Cock, 1 and 3; Cockerel, 1 and 2; Pullet, 1 and 2; Hen, 1 and 2; Old Pen, 1; Young Pen, 1.

S. C. Black Minorcas—Cock, 2; Pullet, 1.

Pekin Ducks—Special, best Pekin Duck in show; Young ducks, 1 and 2; Young drake, 1 and 2; Pen, 1.

White Runner Ducks—Special, best Runner Duck all varieties competing; Old drake, 2; Young drake, 1; Old duck, 1; Young duck, 1; Pen, 1

The Standard Bred Commercial Hen

Chas. J. Fiske

DO NOT confuse the word "Utility" as commonly used by the Poultry Fraternity with the Commercial Hen. The word "Utility" as ordinarily used in relation to poultry means CULLS, birds that are inferior and not good enough for exhibition—without any regard for quality either as egg producers or fitness for meat purposes.

The commercial Hen is a bird that will LAY and PAY, raised from the best Standard Bred Stock that has a record behind it. Any flock of birds of any variety, or any mixture, can be called a utility flock. No utility flock put together in a hap-hazard, careless manner, irrespective of breeding, will ever pay as a commercial proposition.

The man or woman who produces eggs or poultry for market as a paying commercial proposition, must have, irrespective of breed or variety, Pure Standard Bred Commercial Birds, bred from lines that have produced and will produce. The selection of the best variety or breed depends on what the poultryman wishes to market, whether eggs, meat, or both.

The Standard Bird must be pure blood—and the correct shape, size, color—In fact all conditions for the perfect specimen laid down in the Standard for the Show or Exhibition Bird, have a bearing toward perfection and obtaining the best results, from a useful, commercial point of view.

Expert poultry breeders in making this Standard have carefully studied every point and have made the requirements that long experience has proven the fact that birds bred along these lines and to this Standard will not only make the perfect exhibition bird but will give the highest and best results known when brought together in larger flocks as a purely commercial proposition.

"Utility means useful—either for pleasure or profit.

You can derive neither pleasure nor profit from a mixed mongrel flock of fowls.

The Standard Bred Commercial Hen is the real and only "Utility" bird.

How can this hen be produced?

By the Fancier and Commercial breeder working hand in hand.

By honest, intelligent, efficient breeding and selection.

Don't buy eggs for hatching or baby chicks just because they are offered at a cheap price.

Buy only the best from established breeders, who are known to live up to their word—and have the real goods.

Start a year ahead to select your breeders.

Select good strong, vigorous pullets of the breed you desire—Trap nest them—discard all birds that do not come up to the proper standard.

From what is left select your breeders for the coming year.

Mate them with the best males that you can procure (breed as near to Standard as possible from good laying stock.)

Remember no male is too good for a Standard bred Commercial flock.

Give your breeding birds all the range possible.

Only save the best and most vigorous chicks.

Follow this line year after year.

Watch the results and improvement both in quality and in your bank account.

Note—Mr. Chas. J. Fiske is the owner of the Wilburtha Poultry Farms, Trenton Jct, N. J., whose success and reputation is known wherever standard-bred poultry is kept. Mr. Fiske has had a large and long experience in poultry breeding. We value his opinions and commend his writings to our readers. H. P. S.

WHITE LACED RED CORNISH

(M. K. Thomas)

Having read with interest Mr. Wheeler's article in "Everybodys" on the White Laced Red Cornish, I wish to endorse all he says as to the good qualities of the breed. I, however, would dissent when it comes to calling them "The Light Cornish," as the Standard calls for anything but a light bird. While the present name may be somewhat cumbersome to those unfamiliar with the variety, it has a good ring to the true friends of the breed who lay emphasis on the "White Laced Red." So, if it is really desirable to shorten the name, perhaps the dropping of the "Red" would answer best; however, it is the "White Laced Red" we are all striving for. I have bred them since 1910 and find them the fowl par-excellence, discarding all other birds.

FRED A .HINDS — WHITE WYANDOTTES

Fred A. Hinds, Battle Creek, Mich., has long held the reputation of being one of the leading Wyandottes Breeders of Michigan and of the Mid-West. His years of breeding and successful winning have proven the merit of his line which we along with the breeder can recommend. Write him your wants and be assured of receiving the best of care and stock. J. A. T.

Dwarf Essex Rape As A Green Food

J. Courtney Punderford

GREEN FOOD is an absolute necessity, both for matured and growing stock. This does not mean through certain seasons of the year, but every month, if the best results are to be obtained.

During the Winter months, sprouted oats, mangel wortzels, cabbage, and lettuce can be fed to advantage and we then come to the best and cheapest green food for Spring, Summer and early Fall.

I have tried sowing many different grains in the orchards and free range where the youngsters roam, but I have yet to find a green stuff which can equal Dwarf Essex Rape. Down in New Jersey we usually plant this the latter part of March and should the weather permit, it can be sown by the 12th or 15th, which I have done many times and received most satisfactory results. I generally figure about four pounds to the acre, broadcast or two to three pounds per acre in drills.

One could plant Rape any time during the Summer months, and should this be done in July or August, it is better to mix a third of seed oats with it, as the oats will come first and help to shade the Rape from the hot sun This is particularly true in sandy soil where the ground dries out quickly. Be careful not to sow too thickly as I have found that should this be done, the results are not nearly as good. This applies especially to the sowing in small brooder runs.

Rape can be grown in the poorest soil, a little fertilizer simply being needed and a poultryman always has this on hand in the cleanings from his houses.

It is most essential that you allow the Rape to get a good stand, for should you turn out your youngsters or breeders on it before this is accomplished, they will kill it in short order, as they are most eager for it, at times preferring it to grain or other food.

Essex Rape grows very rank and affords excellent shade for chix and growing stock during the Summer months, for when it is allowed to grow rank, it sends out a large leaf, somewhat like the cabbage plant.

It is not a good plan to allow entire fields to grow thus. Keep cutting it back and feeding to your old stock if they have no green food at hand and you will find it will grow out again very quickly. The youngsters also keep it down quite well if it has not got too far beyond them.

The leaf is very tender and succulent and for baby chix it can be run through a meat grinder and fed in the shredded form which makes an excellent feed for them, being very juicy and easy for them to digest.

Rape will last up until the middle of October nicely, and by that time you will have your yards and runs seeded down in Rye and ready for the matured stock to run on. Rape is generally supposed to be killed by frost and severe Winters, but I have had several fields which I have not plowed up in the Fall come up in the Spring with a good growth. But I should not advise this method, as it it only a chance and not the correct way.

It has always been a mystery to me why so few poultrymen use Rape. I have been to many farms and in talking over the green food question, I find that they have not even heard of it.

I trust you will take this for what it is worth, and from one who has tried every known green food on the market, that is, that Rape is without doubt the cheapest and best green food for Spring, Summer and Fall.

It retails at $3.75 or $4.00 per bushel or $7.00 to $8.00 per 100 pounds, so you can readily see that for $7.00 you could sow twenty or more acres in green stuff.

For pasturing sheep or cattle it is ready within six weeks from time of sowing and on an average one acre will carry twelve or fifteen sheep six weeks or two months.

In Northern States it should be sown from May to the end of August for Fall pasturing, as it thrives best in cool weather, and in the Southern States in September or October for Winter pasture.

Its fattening properties are twice as good as those of clover and for sheep the feeding value of Rape excels all other known plants. You will find it is one of the best investments you have ever made in the way of planting and results are assured.

Breezes from the Mid-West

by Theo Lewes

The outlook for the farmer is promising. Influenced as markets and prices are by our foreign commence, the results of the past few months in our trade abroad indicate a bright future.

The United States Commerce Reports of September 20th, show the following figures for the seven months ending July 1915: Exports of foodstuffs—in crude condition, partly or wholly manufactured, and of food animals $626,269,730
Imports of the same class of materials for the same period 312,686,611

Excess in favor of the United States.....$313,586,119

This should mean a good market at good prices for all food products the coming year. There is cause for the greatest optimism and this will affect the prosperity of the entire country.

This brings up the point that few of us realize; the great influence our foreign trade has on agriculture and business. It has taken the terrible European War to wake us up to the needs of an increased, substantial commerce with other nations.

And it looks as if the war might last much longer. We predict that it will bring the American farmer into his own. He will receive prices he deserves and even after the war they will be maintained. So certain is this that you can go ahead with improvements now that you've often thought you couldn't plank down the cash for, with perfect confidence in steady markets. Invest in some good available fertilizer—it will pay you well. Make some good additions to your dairy herd Fix up your buildings or build the new and permanent ones you have been thinking of

The money is coming your way. Invest it right on your own farm for better crops, better livestock, better living. The risks are gone this year.

* * *

The delay in shipping the second addition of the Standard is causing a lot of inconvenience to breeders and publishers. It seems this delay has been occasioned by the Editing Committee in checking up errors for the second edition. We do not understand why it should take more than a few days to go over this book and make the corrections. It is certainly very important that every breeder that intends to exhibit at the early shows, should have a copy of the Standard in his possession, so that he may know at least what the disqualifications are in his breeds.

* * *

The return of good times is being felt in all branches of trade. Men are working in nearly all lines and quite a few of the factories in the Middle West are working overtime. In a recent issue of the Indianapolis News, there were more ads in one issue asking for male help, than have appeared in this publication in any one single day in the past two years. There is a demand for labor at good prices, and the Saturday night pay checks are bringing in a lot of money into circulation, that has been hoarded up for the past eighteen months. The poultrymen are getting a part of this, as all of the well advertised breeders are receiving double the calls they did a year ago, and the prices for good birds are decidedly in advance of what we had expected six months ago; in fact, it seems as though we had reached the bottom and were gradually climbing up to the pinnacle of prosperity. Let us hope that the past eighteen months has been an object lesson for everyone, and that we may learn to profit by experience, and not recklessly, as many were inclined to do a few years ago.

* * *

We regret to learn of the death of Charles H. Rhodes, of Topeka, Kans. He was one of the best known judges West of the Mississippi River, and one of the nicest fellows ever associated with the poultry business. We had known Mr. Rhodes intimately for more than a quarter of a century; in fact, long before he ever offered his services to any association as a judge, and for the past fifteen years we had been associated with him in many of the large Western exhibitions, and we doubt if there was a man in all this Western territory that was as well known and as well liked as this old time fancier. Many who knew Mr. Rhodes in the past few years, are not aware of the fact that twenty-five years ago he was considered one of the best Black Cochin breeders in America. Birds from his yards were known from one end of this country to the other. He was one of the first to introduce the heavy feathered type, and his home in North Topeka, Kans., was always visited by the breeders from a distance, who had a few hours to spare in the Capitol City. His death is a real calamity to the Western fanciers, as he had probably done more to hold hundreds of the local associations together throughout the West, than any five men combined. He was engaged to judge some twenty shows the coming winter. This, of course, necessitates a change, and quite a number of the Associations are finding themselves without a judge, and perhaps, quite a few of

The week of October 4th the writer was called to St. Louis to place the awards at the St. Louis Fair. This is one of the exhibitions that for the past ten years has been off the map, and the breeders from that section of the country have been exhibiting at the State Fair at Sedalia, but realizing that a city the size of St. Louis was entitled to an exhibition separate from the State, they have decided to resurrect the old St. Louis Fair, and this was the first year that they put on a really high-class exhibition. The old race course West of the city was selected, and it proved to be an ideal location. The ground is rolling, much after the style of a natural amphitheater. The race track being on the lower part of the ground, gives a view of the track from almost any position on the ground. The live stock was displayed in Tents this year, but we understand there is a movement on foot now to either buy or lease the ground and put up permanent buildings and make this one of the big fall fairs of the country. Many readers of Everybodys will remember the elegant shows that were formerly held in St. Louis the week of the Veiled Prophets' Parade, and this date will be maintained in the future. The poultry exhibition this year, under the management of Henry Steinmesch, was one of the big attraction of the Fair. There were over two thousand birds on exhibition, representing nearly every breed and variety in the standard. The quality was good throughout, and there were many interested fanciers ready to buy and pay what really first-class birds were worth. In all popular varieties, Plymouth Rocks, Reds, Wyandottes, Leghorns, Orpingtons and Cochins, competition was strong, and many good ones left out of the money, while the water fowl exhibit was a show of itself.

At this writing we don't know just what arrangement will be made for next year, but when I left St. Louis, it was generally understood that we might look ahead to 1916, and expect to seen St. Louis on the map with one of the greatest Fall Fairs held anywhere in the United States.

* * *

Fanciers who have had an opportunity of attending the big Fall shows or those who have visited the yards of the prominent breeders, were surprised at the quality of birds that have been produced during the season of 1915. Regardless of the fact that we have had an enormous amount of wet weather, more birds of good quality have grown to maturity than any year in the past ten, and the winter shows of 1915 will undoubtedly be the greatest quality shows ever held in America. At this writing, November 1st, there are hundreds of matured specimens in all the leading varieties in the State of Indiana, birds that are fit now to go into the fastest company, with a reasonable prospect of being in the money, and the same condition exists in Wisconsin, Illinois, Iowa, Missouri, and other states that we have visited.

* * *

Regardless of the foot and mouth disease and other obstacles that have confronted the San Francisco arrangement, they managed to get out one of the greatest shows that has been caged in America. Something like 8,000 specimens of poultry and pigeons, representing nearly every state in the union, and some foreign exhibits. It was, indeed, fortunate that this exhibit could not have been held earlier in the season, say the early part of September, when there would undoubtedly have been 15,000 to 20,000 birds exhibited. We understand from Mr. Quisenberry the reason for holding the exhibit back until the latter part of November, was due to the fact that there was a question as to whether the Live Stock Building would be completed in time. Thousands of fanciers would have attended the exhibition early in the season who were unable to go the latter part of November. It is to be hoped that the fanciers will find good weather at this late date, but as a rule cold rains occur at this time in that part of California. A tempered breeze blowing off the Pacific Ocean, striking the cold air from the mountains, usually causes a heavy rain fall and disagreeable weather. While it never gets cold in San Francisco, as compared to the East and middle states, there is something in that air that seems to chill the very bones in you, and of course, there can be no provision made for heating these live stock buildings, but regardless of conditions, we must give Mr. Quisenberry full credit for getting out one of the best shows that has ever been held on the American Continent, and the breeders who failed to exhibit, have much to regret.

* * *

In a recept issue of the Feathered World published in England, we find a reproduction in colors of a pair of light and a pair of dark Brahmas. No doubt many of our American fanciers have had the pleasure of studying this picture, and we wonder if the English breeders of today are really trying to produce birds of this type. Both of the females are as heavy feathered as any Cochin we find in our best exhibitions, and while the color work is greatly exaggerated on the dark female, there is considerable artistic effect in the illustration, but both the males and females are so short in back that the hackle rests on the saddle of the males, and there is less than a half inch space between the hackle and cushion of the females. All of them carry their tail at an angle of about 55 degrees and are very much after the style of our present-day Langshans.

* * *

Fanciers who are interested in ancient history, and would like to know something about the first exhibition that was ever held in this country, may secure an exact duplicate of the first premium list by writing for a copy of the Milwaukee Show premium list. This old list is printed complete and becomes a part of the premium list. Should any breeder desire a copy printed on first-class quality of paper and forwarded in a mailing tube, suitable for framing, he may secure the same by sending ten cents in stamps or coin to the writer at Indianapolis.

Poultry Secrets

Michael K. Boyer, Hammonton, N. J.

IT IS remarkable how people will hang on to old-time superstitions, and how many theories they have which they safely guard as "secrets."

It was not long ago that the writer was told that there never would be a poor hatch "if a horse shoe was placed in the bottom of the nest," The teller believed it, too, and said he tested the matter for years!

Another wrote that he discovered a secret to increase egg production. He used about a half dozen China eggs in each nest. The hens seeing such a large number of eggs, at once determine to increase the pile, and accordingly add to it. He said this secret never failed!

Another writes: "I have a real secret—always set your hens in the full of the moon. It means a big hatch." As the moon gets full but once a month, the hen can hatch and start brooding her young before the next hatch starts

Another: "Hens become poor layers in houses that are painted red." As red is the color that adorns all the buildings on the farm for the writer it will now be in order to have the color changed—to green, for instance.

Another: "Eggs will not beat up well if they are laid by unmated hens. My mother says she cannot beat up such eggs to a froth." My, my! What an injustice we poultrymen have practiced all these years.

Another: "Hens won't begin to lay until you mate them." That's news, indeed, but what on earth has started our hens to lay?

Another: "You can tell the sex of the egg by its shape, or rather by its shell condition." He said he selected 200 rooster eggs, and when they hatched there was but one pullet, and he is sure the egg producing it was a fraud. He also selected 50 pullet eggs which hatched 50 pullets. He says the pullet eggs are smooth at the ends, while the rooster eggs have a zigzag or quirl at one end.

Another: "The way to tell eggs that are impregnated, is to hold the egg with one hand, the large end upward, near a lamp or candle, in front of the eye, and then bring the other hand, with the fingers half closed over it, and the incubation spot will be clearly seen on the yolk."

There are still many who bemoan the fate of their eggs should a thunder storm come up during the progress of incubation.

And so on might be mentioned scores of similar foolish beliefs.

But bona-fide secrets do not exist. Men in all vocations of life, if they carefully study their subjects, and follow out the dictate of their work, will sometimes come across a method that will help them on to success. Such methods, after being thoroughly tested, evolve themselves into secrets.

It is not unusual, however, to find that someone else, in another part of the country, has had the same ideas, and is working along the same lines.

A publishing firm some time ago advertised to pay a certain sum for real bona-fide poultry secrets. The writer was delighted to be the judge. Fully 500 replies were received, and of these 300 referred to "a cure for cholera," "a cure for gapes," "methods for destroying lice," and cure-alls for every known ailment. The text of the majority of the replies was ridiculous —even recommending "corrosive sublimate in the drinking water" for chicks afflicted with cholera.

The poultry world wants good, bona-fide secrets—secrets in feeding, secrets in housing, secrets in care, secrets in management, secrets in successful operation. But there is no need for secrets in fighting disease. It is far better to know how to keep fowls well than to endeavor to cure sick fowls.

Men who are in the business because they find great interest in it, will some day discover a secret, but they may not get to that point until they have reached the years of discretion. When such men as Felch, Williams, Rankin, Zimmer, and others, men who have been identified with poultry for from 30 to 50 years, declare they are "learning every day," and have "only recently discovered a secret," it follows that there is little danger of the beginner becoming the possessor of a great secret of his own finding.

If the beginner will start out with the determination of coverng every detail, and gradually improves his methods, he will eventually find a secret, but it may take him ten, yes 30 years to do so, just like it took Felch, and Rankin, and Williams, and scores of other veterans.

* * *

At the outbreak of diarrhoea, there is often a cry of cholera. It is a false cry, but the case, nevertheless, needs treatment. Boil some rice, and mix it with plenty of powdered chalk an excess of this will do no harm, as it will effect a cure and pass off naturally.

Constipation in chickens is often noticed during the summer months.

Myers' Barred Plymouth Rocks

"Lady Beautiful" Strain, Pullet Line Exclusively

My winnings, year after year, at the leading shows of America, where the Barred Plymouth Rock Classes are the strongest, show conclusively the quality of my line.

Winners of Five Championship Female Specials at Madison Square, Garden, N. Y., 1914; Philadelphia, 1913 - 1914, Hagerstown, 1914; Williamsport, 1914.

This unapproachable record stands unequalled. It was made at my last five exhibits, competing against all birds in the American Classes.

AT THE GREAT HAGERSTOWN SHOW, 1915

My winnings there for three years are History. This year my birds won: Hen, 1, 2, 3; Pullets 1, 2; Pullet-Bred Males,, 1, 2, 3 4, 5; Championship Special Female, Etc.

C. N. MYERS *Box E.* *Hanover, Pa.*

It has been advised to use Epsom salts in the drinking water, but this is a rather violent purgative, and very griping in action. It is better to use oily laxatives and purgatives. Linseed meal mixed in the soft feed will act as a gentle laxative. The writer used it daily in the mash—about five per cent—the year round and never, in consequence, has any cases of constipation among his fowls. Some prefer a few drops of castor oil in the feed, after making the chicken miss one meal, and thereby rendering it hungry.

Shipping newly-hatched chicks is carried on by quite a number of poultrymen in England. They are sent off as soon as fit to leave the nest, or, in other words, directly after being hatched, as they can then do without food, if the train service is properly selected, until they reach destination. The following method of packing, the chicks is practiced: A rather small, low box is chosen, in which a little air-space remains abve the chickens' heads when standing up. The bottom and sides of the box are lined with cotton-wool, which is cheap and warm, and if done with a couple of thicknesses and just tacked in, the box can be turned out in a few minutes. The cover is then perforated with many small holes, and a couple are bored at each side of the box, about half an inch below the cover. This creates ventilation without draught. On the inside cover of the box are nailed a couple of old pieces of flannel, about four inches apart; this is allowed to fall within half an inch of the floor of the box. The curtains are then cut into half-inch ribbons. The chicken is thus able to pass through the slits, the curtains keep them warm when they cluster around and against them, and yet there is ventilation without draft. The box is then conspicuously labelled: "This side up; live chickens; urgent," and sent by express train.

The hawk generally carries off the young chicks, but if they attack larger ones, their bodies will be left, and it will be found that death has been caused by the back of the neck, the skull torn open, and the feathers (if the carcass has been devoured so that the skull evidence is not available) are widely scattered around, but not trailed. Should the chicken be found lying dead on its side, with its neck stretched out, and a small wound in the throat, it is the work of a weasle that has sucked its life blood. If a carcass is found with the head and breast devoured, it is the work of a cat. As a rule, the rat does its deadly work at night, and here the carcass is often found very badly mauled. The entrails are generally drawn out, but not eaten, and the carcass is bitten and gnawed in many places.

* * *

Where the age of the fowl cannot be told by the legs, there is often a dull, heavy look under the eyes of an old bird, which an experienced poultryman can tell at a glance. But in all up-to-date poultry yards the birds are branded, and a record kept of them, so that there can be no mistake.

* * *

Many cockerels of the Mediterranean class, especially Minorcas, are discarded because of the fact that their combs lop over while they are young. If a big combed bird be a little out of sorts, his comb will at once drop. After he comes into good condition again, the comb generally stands erect, especially if the base of it is thick and strong. If cockerels of this class are forced too much, especially if given a lot of soft food, their combs apparently lose firmness. When a comb is noticed to fall, the bird should be given a cod-liver oil capsule at night, and fed entirely on grain. In some cases, cockerels' combs are so weak at the base that nothing will make them stand, but even such birds should not be discarded, for if they are otherwise good they will be valuable for pullet breeding.

YOUR HENS ARE CHEATING YOU

If your hens do not give you a 60 to 70 per cent egg yield during the winter months, they are cheating you out of your work and feed bill; but old biddy is a pretty appreciative specimem or the feathered family and is wiling to respond freely to the right kind of treatment.

So many poultry raisers think the hens cannot lay many eggs in winter and for this reason believe it a waste of feed and energy to provide them with material to make eggs from and feed only corn, corn and some more corn.

This way of treating your feathered friends is altogether wrong. If you provide spring feeding conditions for your hens theh will respond promptly and abundantly with eggs that bring a big price and do not have to go begging.

The most necessary feed, besides a diversified grain ration, is sprouted oats. When oats are quickly and correctly sprouted, they not only provide the cheapest known feed but also contain the wonderful succulence of crisp, tender, green feed as well as the egg forming ingredients for which oats are so well known.

This wonderfuul feed can be produced in a week's time with the help of only a little moist heat and water and 15 minutes a day attention in the "Successful" Sectional Grain Sprouter, manufactured by the well known Des Moines Incubator Co., of Des Moines, Ia. Note their ad at bottom of page.

This sprouter is built differently from any other sprouter on the market. It has double steel walls throughout, is built in sections, enabling you to add to your sprouting capacity at a small expense, has a separate glass door for each section, a hinged top, so you can water the grain from above and in one operation and has one piece solid galvanized steel trays that never wear out, never get rusty, are easy to clean, easy to remove and place back. The whole sprouter is practically indestructible and safe to operate anywhere in the house.

This sprouter, on the market now for 2 years, was a success from the start and is now in use in every state in the Union and Canada. Quantities of voluntarily sent in letters of endorsement testify gladly and willingly to all the claims made for the sprouter and the benefits the operator will derive from its use in the way of reducing the cost of feeding the fowls, increasing the egg yield during the fall and winter months, of obtaining a much better fertility of winter laid eggs in order to secure real early hatches and of being able to provide your chicks with a feed that makes them grow like weeds. It is a dividend payer and useful article the year round and next to the Incubator is the most important poultry appliance for the poultry raiser.

It is sold under such a liberal "Try-it-out-and-money-back-if-not-satisfied- GUARANTEE" that the loss is all your's if you do not write to the above named firm and get their interesting and instructive literature on their wonderful, green feed producing machine. We would thank you if you would mention the Everybodys Poultry Magazine, in writing to them.

20 Lbs. Raw Oats
Make 70 Lbs. of Best Green Egg-Making Feed

WHY allow your hens to loaf when you can make them give you eggs a-plenty right at the time when prices are highest? Feed sprouted grain—crisp green feed that you can make yourself for only 15c a bushel with the "Successful" Grain Sprouter. Make three bushels of tempting egg-making feed from one bushel of oats, wheat or rye—increase the egg yield at least 50%—and at same time save ⅓ feeding cost. Write for catalog and 1916 offer we make on the

"SUCCESSFUL"
SECTIONAL ALL-STEEL GRAIN SPROUTER

Made with double steel walls—metal trays—nothing in it to warp, shrink, swell or mold the food. Fireproof. Lasts a lifetime. Large glass doors. Made in sections so you can add more sections as your needs grow. There's a size for your needs whether you keep 50 or 600 hens. Thousands of poultry raisers say they would not be without this wonderful food maker. The newest, most reliable construction ever made in a grain sprouter. Not only turns idle hens into industrious layers but supplies feed for growing chicks—protects health—prevents chick loss. Booklet "How to Raise 48 Out of 50 Chicks" 10 cents.

Editor's Desk

EVERYBODY READS EVERYBODY'S

THE CHRISTMAS SHEAF

"NOW, good-wife, bring your precious hoard,"
The Norland farmer cried,
"And heap the heart and heap the board,
For the blessed Christmas-tide.
"And bid the children fetch" he said,
"The last ripe sheaf of wheat,
And set it on the roof o'erhead
That the birds may come and eat.
"And this we do for His dear sake;
The Master kind and good,
Who of the loaves He blest and broke
Fed all the multitude.

* * *

The Fall Shows with few exceptions, have had a smaller entry than in the past, no doubt due to the shortage of early hatched and matured birds, as this season has been backward and changeable. Quality shows up well, in fact it is better than ever, with breeding value back of it.

* * *

The shows we have attended in the South, East and Mid-West have no reason to complain. Their entries more than filled their buildings and coops. They had enough, all of them to be seen to advantage and to insure the best of care and condition. Well filled classes of quality stock was the feature noted and desired most.

* * *

We regret that the White Laced Red Cornish article printed in our October issue passed us without the liberal use of blue penciling and was printed as received with some uncomplimentary reference to the Boston Show and its Sec'y. We do not approve of hearing persons called "Crabs" and particularly not Secretary Atherton who has always been fair to one and all alike. He has built up a monster show of extreme value to the industry, well known as the "American Beauty Show" on his policy of justice to all, and would, were it possible, give preferred position to every bird and class were it in his power to do so. We were pleased to print in the November issue his reply.

* * *

The justice of the peace in a town in Ohio, in pursuance of his duties, had to hear and judge cases that were brought before him, and also perform occasional marriage ceremonies. He found it difficult to disassociate the various functions of his office.

Everything had gone smoothly until he asked one bride: "Do you take this man to be your husband?"

The bride nodded emphatically.

"And you accused," said the justice, turning to the bridegroom, "what have you to say in your defense?"

* * *

While you are reading this, the Palace New York Show is on, probably you are attending, we hope so.

Springfield, Ohio.

Dear Sirs:

I received the cup and it was a great pleasure to show it to the members at our meeting last Monday evening. I also got thirteen more subscriptions which I am sending in today on a second cup.

Respectfully yours,
Mrs. John Carter.

* * *

Kennett, Mo.

Gentlemen:

Start the subscriptions any time convenient to you. First batch on another cup. The one received is certainly a dandy. Many thanks.

Yours truly,
Robert Hall.

210 Market St.,
Paterson, N. J.

Gentlemen:

Please send me soon as possible some samples of Everybodys. I want another cup for the Paterson Show.

Yours truly,
Dr. G. Johnson, Sec'y.

* * *

Lafayette, N. J.

Gentlemen:

The four silver cups have been received and nothing but favorable comments are heard from everyone who sees them.

Yours very truly,
J. S. Roe.

Then comes Philadelphia with her Tenth Anniversary Show, one of special importance this year. The members of this association have proven their loyalty and have every reason to expect the best within the gift of the fancy and the breeders. The Great Madison Square Garden Show comes the end of this month, entries close soon, don't delay, consider it a duty to show there. Its awards carry special prestige and an exhibit is always a sound investment. Boston comes next, of course we will see you all there, even Auto No. 232-15 or I miss my guess. We can only say "Welcome" to this and hope Billy won't lose his hat.

A Thought For Today

In such a world as this a man who is rich in himself is like a bright, warm happy room at Christmas tide, while without are the frost and snow of a December night.

* * *

Editor's Desk

When in New York City lately, we called upon Wm. Stanley Hill, No. 103 Park Avenue, the new owner of the Monmouth Poultry Farms at Freneau, N. J. This is the plant and line of S. C. Buff and White Leghorns made famous by Judge J Courtney Punderford. We believe that Mr. Hill will prove a worthy successor to Mr. Punderford. He has the ideas and make-up of a royal booster and true fancier and we are pleased to recommend him to our readers and wish him success. He will join the "Fleas" at the Garden Show, special committee, X. Y. Z., in charge

* * *

Some merriment is caused by the fact that a Kansas farmer has bought an aeroplane. But why shouldn't he? If wheat can soar. why not the wheat grower?

* * *

Our artist S. Edwin Megargee, Jr., is a specialist in poultry work as well as in advertising. He will attend the leading shows in the East and will be pleased to arrange to make illustrations of your birds and any special work you may have.

Look over this copy of "Everybodys" well, then tell us if it does or does not please you. We think you will note improvements made, also consider that from a mere nothing handed us in April last we have accumlated a list of very close to 50,000 subscribers. Note our list of contributors, read their articles, consider then, if you have a plan, or idea when or how we can publish a better magazine or when we can be of more benefit to breeders and the industry. Please tell us, we want to know.

* * *

You can never tell where the country newspaper goes to, says an exchange. Some of them are like the editor who wrote to a catalogue house for some advertising.. They replied that they would be glad to use his space, but would like to know what territory his paper covered, whereupon he told them: "This paper goes from New York to San Francisco, from Canada, to the Gulf, and it keeps me working until 2 o'clock in the morning to keep it from going to hell."—Falmouth, Ky., Outlook.

NEW EXPRESS CLASSIFICATION COVERING SHIPMENT OF POULTRY

(E. M. Long)

Effective Oct. 14th, 1915, there was an important change in the Official Classification of the various Express Companies, governing the acceptance and shipment of poultry for interstate movement.

Thinking that fanciers and breeders as well as purchasers of standard bred poultry would be interested in this change, I have decided to make this matter the subject of an article.

Up to October 1st, it was necessary for Express Agents to execute Live Stock contract only when shipper declared a value of over $5.00 per bird or $50 per maximum shipment, otherwise shipments were receipted for on Regular Express Receipt. The Rate on Market Poultry Second Class, other than Market, in slatted coops, 1½ times first class rate. In coops where muslin forms a necessary part of coop or in corrugated paper coops, 2 times first class rate. Rate on newly-hatched chicks was 1½ times first-class rate. Poultry for Exhibition, shipped at above rates could be returned to original point of shipment at ½ of first-class rate.

The new Classification reads as follows: Poultry and Pigeons, Live: Value must be declared by shipper. If not declared, shipment will be REFUSED.

A Live Stock contract must be executed for Shipments of Live Poultry and Pigeons, except that when shipper has declared a value of not exceeding $5.00 per bird in the shipment, maximum $50.00 per shipment weighing one hundred pounds or less, and not more than $0.50 per pound, actual weight, on each shipment weighing more than one hundred pounds, it may be accepted on the Uniform Express Receipt.

Food and Utensils must be provided at expense of shipper.

Instructions of shippers as to feeding and care of animals in transit when given in writing or plainly marked on the container, must be complied with, and no charge will be made for feeding when food accompanies shipment.

Charges will be based on the gross weight of the contents at time of shipment.

Any coop, which with its contents exceeds 150 pounds in weight will be refused.

Present Classification

In slatted coops:

When value declared does not exceed 25 cents per pound, gross weight poultry and coop,—second class.

When the value declared exceeds 25 cents per pound, gross weight of poultry and coop,—1½ times first-class.

In coops where cloth is used and forms a necessary part of the coop, two times first class.

* * *

You will notice that where the value declared is under 25c per pound, any poultry will take 2nd class rate, which is about one-half the rate charged at one and one-half times first class rate. If buyers or shippers are willing to take the risk of shipment, there is nothing to hinder any stock from being shipped at the lower rate. When giving value of shipment to express agent at time of shipment, it would be only necessary to state that "the value of the shipment was 25c per pound gross weight" and the lower rate should be then accorded. It is probable that if shipment is properly crated, marked and explicit directions given on box or crate, for feeding and watering, that the Express Companies would give them as good care as those valued at a higher figure. I anticipate, however, that few breeders will care to ship out stock at their risk on such a valuation, because there are few shipments that would not exceed 25c per pound in value. For instance, a male bird of the heavier breeds will weigh, when crated properly, from fifteen to twenty-five pounds. Take twenty pounds as an average,—the shipment would have to be valued at $4.00 in order to get second class rate. If, however, the buyer was willing to take the risk, he could instruct shipper as to valuation, and be governed accordingly. As the purchaser, like Jones, usually pays the freight, I anticipate that many will take advantage of this opportunity.

WHEN writing advertisers always mention that you saw their advertisement in "Everybodys." This will be to our mutual advantage. Do this so we may have the credit due to us. Please don't forget this.

Monmouth Farms

John Lockwood, Supt., Box 54 Freneau, Mon. Co., New Jersey.

A MAN went into the suspender business. He built a factory, bought machinery and materials, hired workers, got up steam and began to turn out suspenders.

"How will you sell your output?" someone asked.

"By George! I never thought of that!" he replied.

The story is impossible—of course.

But it seems that a whole lot of poultrymen, all over the country, are doing business a good deal that way.

Owning valuable land, expensive equipment and costly stock, they spend so much time and energy in the production of eggs and broilers that they have little opportunity to think of the selling end.

So they take whatever the market offers, without considering how or where they might find better markets—and larger profits.

The COUNTRY GENTLEMAN

a year, fifty-two issues—

The great national farm weekly has been doing some thinking about these things for you!

At the same time that it is urging better farm methods for field and orchard, for feed lot and poultry yard, for garden and home, it is constantly telling how to reach the markets.

It is talking coöperation and selling methods.

Consider your poultry and eggs!

Why are prices low for farm eggs?

How can they be increased?

What sort of poultry does your market like best?

When is the best time to sell?

We answer questions like these *every week* in our poultry department.

And if you have a special question about *any* farm work, our staff of more than a hundred experts will answer it by mail.

The new price of THE COUNTRY GENTLEMAN is *$1.00 a year.*

And it comes 52 times a year—every week.

Fattening Fowls for Market

A Sadly Neglected Part of The Poultryman's Work, Fattening Fowls for Market—The Breeder of Thoroughbred Stock Should Know as Much About This as Conditioning for Show—H. V. Tormohlem.

WE SEE no end of articles on conditioning birds for the show room but we hear little about fattening birds for market. Breeders and farmers alike do not seem to know the first principles of conditioning for market although they have raised fowls for years and know by experience about nearly everything else connected with the industry.

We have in our town a man engaged in buying and selling market poultry, or rather he is the head of a vast company engaged in this business. He graduated from the local high school 25 years ago in a seven dollar suit and in a few weeks was buying junk with a pony and old wagon not worth all told $20. He later branched out and commenced to buy eggs and fowls. A year ago about this country flashed the news that the biggest deal ever made in the history of the country in eggs had just been closed whereby New York jobbers bought of The J. A. Long Company, $150,000 worth of eggs in storage. This shows the magnitude of the business he now conducts. Two or three years ago he absolutely controlled the New York Egg market, which means the entire country. Upon his dictation depended the price of eggs.

Mr. Long attributes his entire success to his attention to the small things and among them acquiring the knowledge how to fatten fowls for market in the cheapest and best way. He is frank in declaring many of his competitors do not know, even after years attempting, the way to properly fatten fowls for market.

Several months ago he recited to me how a man in an adjoining county used to come to his very door and buy geese and pay a cent or two more on the pound than he would dare to pay and take them home and fatten them and became rich buying geese from the farmers, fattening them a few days and selling on the eastern market.

Try as he would, Mr. Long stated he could not pay the prices this man paid for geese and make any money. He would lose rather. One day they happened to be coming home from New York on the same train and Mr. Long with his ability as a good conversationalist drew his friend out as to how he could make money on geese. His friend and competitor became so friendly that he went so far as to invite Mr. Long over to his plant to see everything he cared to see, take notes and make measurements of coops and what not. With a twinkle of his eye, Mr. Long finished the story in a word. Like Caesar he came, he saw, he conquered. "I went and I looked over the whole thing very carfully and had a pencil and paper handy. The next year I was buying geese around this man's door and have been ever since."

I will not recite how he fattens geese, as few are interested in this phase of it. I will give you the benefit of his years of experience as a fattener of thousands of car loads of fowls for market. I cannot even give you a diagram or picture at this time of his coops. Suffice it to say all coops have one-inch mesh wire netting bottoms with a pan an inch lower to catch the droppings. Coops are made in decks to hold one dozen in a deck and each deck divided in two parts with six fowls in a part. Six decks are built together on four small wheels. All coops are whitewashed and steam-dried every time fowls are removed. Fowls are fattened in nice, sunny quarters, absolutely clean and sweet and which are also white-washed every ten days. Fowls are not jammed and crowded as six cannot be crowded very much. They are put in the coops and not touched until time to kill. A unit of six dozen with these four wheel truck arrangements is rolled upon an elevator and taken quietly down to the basement where they are handled but once before being killed, as the truck is rolled right up to the sticker.

The fowls are fed ten days on a buttermilk mash composed of 5 parts of ground corn and wheat middlings and one part coarse sand or fine gravel. The mixture is mixed up at night into a thin batter and left to sour and predigest all night. It is fed in a very thin state, much thinner than we poultrymen are accustomed to feeding a mash. It is poured from a bucket easily into galvanized troughs and enough given so the fowls will eat it in about 30 minutes. More is given at noon but only enough to last a few minutes. At night a full feed of whole corn is given. No water is given during the fattening period. Thus they devour much more of the mash than they otherwise would. In ten days the poorest, skinniest hen or cockerel is fat and is a choice milk fed fowl, ready for the best eastern hotel markets.

Any poultryman can afford to market all his culls in the right manner and make this extra money. Cleanliness is the first essential, especially in a large plant where fowls from everywhere come in and disease means great loss. Breeders of thoroughbred fowls could well afford to fatten their surplus stock in half dozen lots in this manner and sell to private trade at a good profit, either to residences or hotels and make nearly as much from a lot of culls as they would from cheap fancy stock.

At this time of the year it would be well for many to try fattening out a lot of old hens and worthless cockerels in this manner.

EVERYBODYS NEWS *from* EVERYWHERE

BY JAS. T. HUSTON

Christmas, that one day we all love so well, young and old, rich and poor, regardless of conditions, are found looking forward to the approach of that day of days. Just how much pleasure we may obtain in the observance of the Christmas Holiday, depends to a great extent on our ability to assist others to an equal enjoyment of the day.

Let this 1915 Christmas season set a new parallel in our understanding of true happiness, and while the great majority may not feel that they can afford to provide for others than their immediate own "Lest we forget" their are thousands of boys and girls and grown-ups as well, who would consider what we count meager luxuries to them are the fruits of untold wealth. Let us get the spirit of giving, playing the game, not as the one who gives to magnify his own benevolence, rather the true enjoyment of the real "not letting the left hand know what the right is passing out." Then we will know that through us, others are made conscious that this old world is not at all bad to live in after all.

* * *

Everybodys wishes Everybody a merry and happy Christmas season and that these closing days of 1915 may be the most prosperous and joyous of your life.

* * *

Why not send Everybodys as a present to that fancier friend? You like it and we are sure that he or she as a poultry lover, would appreciate it greatly. Your order will have our immediate attention. Write today, that we may get it to them by Christmas day.

* * *

Chas. E. Kearns, Everybodys exclusive subscription solicitor at the larger Eastern Shows, paid the Hanover office a visit during the month. Mr. Kearns was accompanied by his wife. They are touring Pennsylvania together for the benefit of Mrs Kearn's health. We trust that this trip will benefit her and that she may soon be restored to perfect health.

* * *

Vineland, N. J. Poultry Association in sending out publicity announcements in reference to its coming show, Dec. 1-2-3 and 4, brings out some very forceful facts which are indeed of interest, among them that Vineland is the center of nineteen hundred poultry industries, with a census of two hundred and fifty thousand fowls, as well as including within her confines the World's largest pigeon plant. The announcements have added that here also are found fanciers by the score, who are doing much to promote more and better poultry, not only in New Jersey, but throughout the country as well.

* * *

The Pratt Experiment Station has compiled in book form the proceedings of the Field Day Meet, of the Delaware Co., Pa., Poultry Association, which are indeed interesting reading, containing much not only to interest but also to instruct the poultry keeper.

H C. Fehr informs us that they will be pleased to send this book free to "Everybodys" readers. Address him 130 Walnut Street, Philadelphia, Pa.

* * *

Poultry interest is on the increase in Carlton County, Minn., as is evidenced by the active organization formed at Barnum, in that county. Prof. Chapman, poultry expert of the University Farm extension bureau, assisted in this, with the result that a permanent organization was made.

Prominent speakers have been engaged and at the meetings thus far held, great interest has been aroused, fanciers coming to these meetings from every section of the county.

* * *

The Poultry Show, held in connection with the Danbury, Conn. Fair, proved the most successful in the way of a quality exhibition that has ever been held in connection with this old New England exhibition. Supt. John Deans deserves great credit for the efficient manner in which the Poultry Department was conducted. This is a fanciers retreat and they were ont in force for the 1915 event.

* * *

The Poultry Department of the University of Missouri is planning a great program for Farmer's Week, Jan. 4-7, at which time many prominent poultrymen will talk on subjects of interest to all poultry keepers. A one week's course in Poultry Raising is an unusual event at the Missouri University. At this meeting of Missouri farmers each department in the College of Agriculture offers a complete course or study.

* * *

The Wayne County Penna., Poultry Association put on a great exhibit in connection with the Fair, held at that place, assisting in making it the most successful exhibition in the history of that organization. This is always the case when the poultrymen are awake.

* * *

The Hagerstown, Md., Globe in commenting on the Great Hagerstown Fair states as follows:

There are persons who claim that were every department of the Fair on the same excellent plane of the Poultry Show, that it would be one of the biggest shows of the country. The Poultry Show is regarded as one of par excellence in America, and if the Cattle Show, the Horses, and the hogs, sheep and the Agricultural products were as good in their classes as the poultry, the show would be one which would be unsurpassed.

Surely this is pleasing to the management and all interested in the success of the Hagerstown Fair Poultry Exhibition, as well as a source of satisfaction to every lover of exhibition poultry.

* * *

We wish to call your attention to the advertisement on another page in this issue of J. S. Roe, LaFayette, N. J., breeder of Imperial Blue Orpingtons. Mr. Roe has been successful in producing some extra good ones the past season, all bred from his winners during the past four years at Allentown, Easton and Trenton Shows. Write him your needs which we personally know will have his very best attention.

* * *

A. O. Schillings cartoon, "How Billy Qualified in October American Poultry World, is indeed a work of art, the characters beautifully portrayed, and true to life. So many cartoonists have the reader in doubt as to just whom the characters represent. Not so with Schillings, who has given to his drawings the same care and atention to type and symmetry as he would to a standard drawing.

* * *

The United Brooder Co., 38-40 Bellevue Avenue, Trenton, N. J., guarantees its product. This firm is advertising for agents desiring that its solid cast iron brooder, with all latest improvements, be placed on sale in every county in the country. We call attention to the advertisement on another page of this issue, which illustrates and describes the Magic Brooder.

* * *

We trust that with the publishing of the next authorized edition of the American Standard of Perfection, the American Poultry Association will place a time limit on those who are responsible for its delivery, thus saving the poultry publications (through whom 75 per cent of the Standards are sold) much embarrassment not mentioning time and postage, in writing those who have purchased through them Standards, which necessarily could not be delivered.

O. B. Andrews at the Chattanooga, Tenn., Show just closed, which was recognized one of the best shows yet held in the South, won with his Efficiency Strain Barred Plymouth Rocks, 1st Cock, 1st and 2nd Hen, 1st and 3rd Pullets, 1st and 2nd Cockerel and 1st exhibition pen, this pen winning special best pen in the entire show. To cap the climax, Mr. Andrew's sweepstake Pullet won special for best bird in the entire show, all varieties competing, also winning special for best male bird in show. This is one of the most remarkable winnings yet made by any breeder of parti-colored varieties, winning every sweepstake prize offered. Mr. Andrews, Box E. P. 303, Chattanooga, Tenn., has hundreds of birds now ready for the show room. Write him, mentioning Everybodys.

* * *

The Aldrich Poultry Farm, 7032 N. High Street, Columbus, Ohio, are mailing their Winter announcement and price list. This is yours for the asking and is indeed interesting to all lovers of the White Orpington. Hercin are listed special inducements to the buyer to purchase at this time. A postal card will do the trick, and we are sure you will be interested in the attractive prices made.

* * *

Charles Hubbard's book of Poultry secrets is one of the most valuable books yet written on the care and conditioning of fancy stock. Mr. Hubbard's years of experience in fitting birds to win at the greatest shows in the world has given him experience not enjoyed by many. All this knowledge is boiled into the pages of this book, which should be on the book shelf of every exhibitor. Send your order direct to Mr. Hubbard at Lime Rock, Conn. The book selling for $2.50 and we believe you will consider it one of the best investments you have ever made.

* * *

L. B. Resseguie, of Millers, N. Y., the well known Barred Rock breeder, paid Everybodys a pleasant visit on November 9th, and reports he has some very promising youngsters about ready for the Winter exhibitions. Mr. Resseguie is a polished fancier and knows a feather. In company with C. N. Myers, of "Lady Beautiful" fame they inspected every good Barred Rock in the radius of a hundred miles from Hanover. Call again, Mr. Resseguie, we certainly enjoyed your visit.

RICE'S S. C. WHITE LEGHORNS

Rank among the oldest and best known strain of Leghorns in America. They have been carefully bred for the heavy production of large white eggs and exhibition qualities for the past twenty years, and have stocked most of the large farms and State colleges. They have also won highest honors in the greatest American shows, both for us and for our customers.

We have hundreds of grand youngsters, both male and female, which are prepared to win for you, and which will surprise you with their great egg laying capacity. We also have some choice yearling hens for your breeders, and which will soon pay for themselves in eggs. Write your wants. Satisfaction guaranteed.

IRVING F. RICE & SON, Cortland, N. Y.

The New American Standard of Perfection

John A. Gough

THE New Edition of the American Standard of Perfection is being issued to the early subscribers, many of whom, seemingly, upon, in many cases, the most frivolous pretext take it upon themselves to rush into print, wherever they can secure space in the various poultry papers to notify the readers that the new Edition is only another method towards forcing the Great and Glorious Billion Dollar industry into the ignoble Company of "Deminition Bow Wows."

Many editorial Savants, who should and who, we personally believe do know better, hold up their hands in "Holy Horror" over some slight typographical error. This in spite of the fact that as we understand, Secretary Campbell has notified the poultry press that only a portion of the copies to be struck off have been issued so that such errors may be rectified in later issues.

It is extremely doubtful, "if" in no matter what character of technical work ever issued from either printing press or other method has there ever been such a thing as an absolutely perfect copy in the first issue, that is, perfectly free from typographical errors.

Then why should certain writers take it upon themselves to endeavor to secure a little doubtful notoriety on such a flimsy pretext? While such assumptions of superior intelligence may impress some, at the same moment, the more intelligent readers realize that it would be much better for such a matter to be quietly and privately drawn to the attention of those responsible for, and having the matter in charge, than to publicly condemn a work of hundreds of thousands of words for a mere misplaced word or paragraph that may easily be corrected, if not in the work or later issues, itself, at least by the issuance of an "Errata" sheet to purchasers.

We are personally inclined to wonder if the writers who so often favor the readers of the various poultry journals with articles, denouncing parts or portions of the "American Standard of Perfection," ever realize what a great amount of injury they are inflicting upon the American Fancy in general by so doing.

Sixty, or thereabout, years ago, the poultry industry of the United States was a practical nonenity. No combined effort, no foundation, no unity of action or anything of the kind and yet today, it is one of, if not the greatest industrial combination in the country.

By the term "Greatest" I mean that it is extremely doubtful, if, there is any other industry wherein so large a number of individuals are interested and engaged as there are found in the interests of poultry.

And to whom must be given the credit for this great growth and its methods of co-operation, other than that of the "American Poultry Association?" While the former is the foundation of co-operation the latter is the "Guide-post" for not only the new-comer into the industry, but also should be for every breeder of poultry as it is for every real fancier.

There have been many definitions for the term "Fancier" and many articles have been written giving the "pro and con" as to the requisites necessary before a common breeder may aspire to the title, but in every one the writer has so far seen or heard of, there has always been one proviso lacking which should read something like the following:

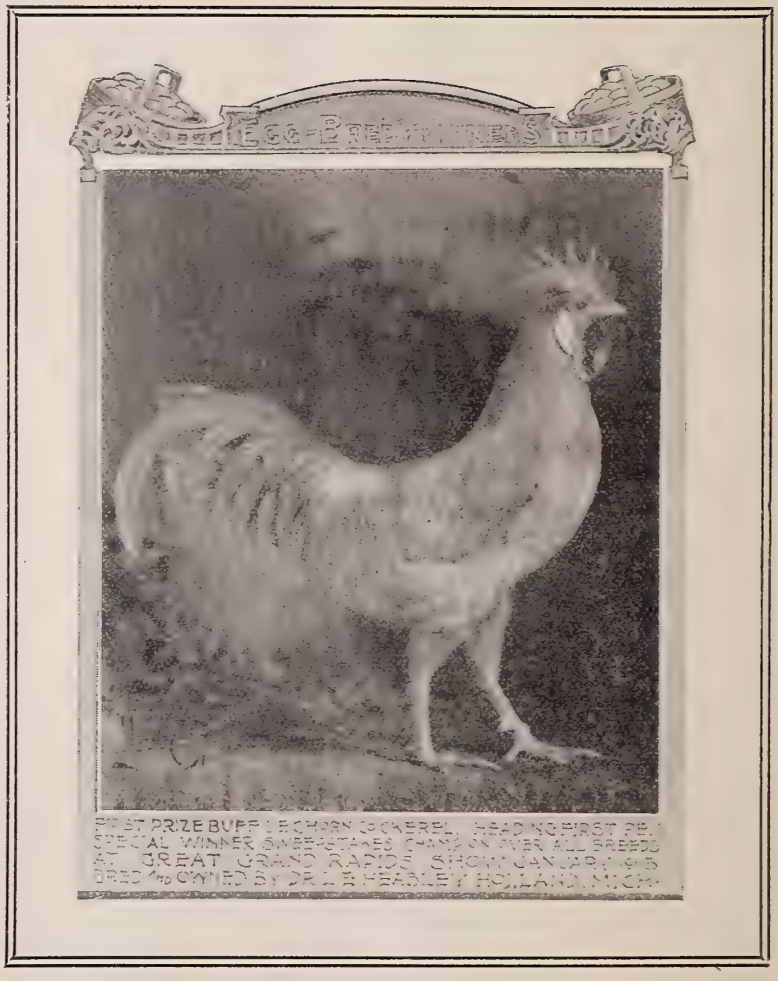
"The true fancier is one who uses every effort to breed his fowls according to the dictates of the American Standard of Perfection and endeavors in every manner, shape and form, to abide by the instructions and rulings therein enrolled, irrespective of his own personal desires or wishes."

If every breeder of poultry in the country would do this one thing, seventy-five percent of the claims of crookedness and robbery in the Poultry industry in this country, would be disposed of and be found unnecessary.

If a writer who disdains through the poultry press to accept the dictates of the American Standard of Perfection would only stop to try and realize what a vast and irreparable injury he is doing the poultry industry in general, we doubt if they would continue and the more prominent the writer, the greater the injury.

It is absolutely necessary that there should be one head to every industry and The American Poultry Association, should be, and is; that of the American Poultry Industry. The American Standard of Perfection should be the scale by which every breed therein enrolled should be judged and governed isrespective of the desires or wishes of any particular individual or set of individuals.

Matters pertaining to objections against any rulings should be taken



up with those having the compiling of such rulings in charge, or be brought before the attention of the "American Poultry Association Members" and let them decide.

"Avarice" is one of the greatest evils with which mankind has to contend, and "Avarice" is the cause and root of by far the greater part of the troubles arising among breeders of poultry.

The chance to possibly obtain a few paltry dollars, is in many cases, the means of changing an otherwise really honest man into a thief. The writer is personally aware of one instance that happened a short time ago, wherein a breeder of prominence sold another some stock. These were approved of by the purchaser and accepted as perfectly satisfactory. Some six months later the purchaser entered these birds in a show and they were disqualified for having "Stubs". Can one blame him for writing to the man who sold him such fowls and demanding satisfaction? And what reply did he receive? He was informed by the party that he owned the best stock in the country, that the fowls had been accepted and paid for and as to the stubs, what of it?

Disqualifications should be dropped from the Standard, according to the leading poultry writers and "Stubs" should be dropped out in the new "Standard of Perfection" and then the purchaser would not be stuck."

Not caring to take chances in a long and expensive lawsuit, the purchaser decided to let the matter drop for the present at least."

In taking up this question with the writer, he naively inquires, "Kindly give me your opinion as to how fowls should be judged in the show room in regard to this matter? Should birds having stubs be disqualified or is the American Standard of Perfection incorrect?

I find that a large number of our leading poultry writers state that stubs should not be disqualifications.

These leading poultry writers are deserving of much censure at the hands of the Poultry Fraternity in general, such writings confuse the Embryo Fancier, distract good and proper judgement in the show room and cause a great deal of unnecessary misunderstanding among both breeders and exhibitors in general.

The persons becoming interested in Poultry Culture, the newcomer into the Fancy is one that receives the greatest amount of such misinformation from these sources.

Ignorant of the truth that the breeders and fanciers in general, in fact the much greater majority are not only perfectly willing, but are absolutely desirous that the "American Standard of Perfection" should govern all work done by judges in the show room, are led to believe that such is not the case, by these defamatory articles and assume that one or two recognized leaders in poultry magazine literature are the real authorities, never realizing until much time has passed, or maybe never becoming acquainted with the fact, that these persons are writing for the money there is in it; that with them it is a means of livelihood; that the methods so pursued are to attain a little prominence in the eyes of the fanciers and breeders, may be to their personal knowledge misleading and erroneous, yet they are entirely unscrupulous in the matter as it is a case of their bread and butter and wil start on anything just to fill out space.

Among this class will be found also the "Ultra Utility Character" who for the sake of a little conspicuous notoriety is very much the same type as the "Practical" writer in a popular magazine who recently condemned the American custom of planting purely ornamental trees and shrubs. Such things be contended perform no useful work, and ought to be discarded. "The Redbud and Flowering almond should give place to Cherry and Peach trees," to which the Chicago Journal adds, and Roses and Spireas presumably should make way for Currants and Gooseberries." Only thus could we have a garden scheme worthy of a 'Practical' people."

The "Practical expert?" of the Garden has his prototype in the Utility disclaimer in the "Poultry World" —while we are quite willing to ad-

Johnson's Announcement For The New Year

New 136-Page Book —Now Ready

Write for a Copy—FREE

M. M. Johnson
Inventor of Old Trusty and Founder of the Largest Incubator Business in the World

IT'S a larger book than last year—has more pages—filled to the limit with latest and best ideas on making money from chickens. Send me your name at once so we can forward you one of the first copies that we get from our press—*free*. Maybe you know that we have started upward of 650,000 satisfied customers on the road to poultry incomes—and that our factory where Old Trusty Incubators are made has grown to be the largest incubator factory in the world. But whether we need no introduction to you or whether you are reading our ad for the first time send for our new book and get the offer we make this year on

This 136-Page Book FREE

Old Trusty

Built with 20 years of Johnson "Know How" with added experience of 650,000 customers

Old Trusty is the *big boss* of the poultry yard where big profits are made. Has a hot water heating plant that keeps the temperature over the eggs steady and even in spite of weather changes. And that's *economical* and *easy* to operate; simple in construction, sure in results.

Still Less Than $10

Shipped freight paid to any point east of the Rockies—a trifle more to points farther west. Quick shipment from factory at Clay Center or warehouses at St. Joe or Seattle, Wash. But what you want first of all is our book. Write your name on a postal and send it to us today so you can start hatches early for big profits.

H. H. JOHNSON

mit that there are many that may be honest and quite conscientious in their opinions on this subject, at the same moment we are extremely doubtful of these prominent poultry writers, who can never assume ignorance of the subject at hand, for they have too long been conspicuous in matters pertaining to poultry affairs to be allowed to assume any such role.

While without doubt the Officials of the "American Poultry Association" have been most willing to assume the precedence in all matters pertaining to poultry affairs, at the same time, they have in many instances been woefully negligent in asserting the authority they profess to possess, where had it been projected would not only have proved invaluable assistance to certain breeders, but would have greatly strengened the confidence of the average poultryman in its powers and would have caused a much larger percentage of breeders to apply for membership in its ranks.

If, instead of inquiring as to whether a complainant was a member of the Association, and, (as invariably is the case) notifying them that upon payment of $10.00 to pay for membership, the matter will then be given consideration in due time, they had taken such matters into hand and if crookedness had been wilfully indulged in, had exposed such throughout the poultry press, then I believe that not only would the average poultryman desire membership, but also the aspirant to doubtful crooked dealing would think twice before he indulged in any such occupation.

The apparent failure of the Association to make good in cases of the foregoing character has very possibly been the reason for many attacks upon the "American Standard of Perfection". Should it prove possible to eventually dislodge the "Standard of Perfection" from its "Supremacy" such measure might prove of much personal worth to some certain individuals whose disparagements, might eventually allow them to issue a 'Standard' to take the same place, that would prove to be of much lucrative value to them personally, to the detriment of the Fanciers in general and an amelioration of the rights of the general poultryman.

The "American Standard of Perfection" should govern the work of Judges in every American Poultry Show and exhibition. Its rulings should be most rigidly demanded by each and every exhibitor, judges presuming to substitute their personal opinions are quite as guilty of fraudulence to the exhibitor, as is the man who sells his decisions or places his awards according to the exhibitors, irrespective of the exhibit.

Attacks upon the "American Standard of Perfection" should be discountenanced for if allowed and persisted in will undoubtedly undermine and untimately destroy the entire fabric of the "American Poultry Association," the "Standard of Perfection" and possibly the Great "American Billion Dollar Industry."

COLDS AND ROUP IN POULTRY

(JOHN E KOCH)

Colds and croup in poultry have received attention for many years, and though some progress has been made toward overcoming losses by these diseases, I have heard of nothing that has proved a sure preventive, much less a cure. About three years ago I began to experiment with the various drugs recommended for these diseases, and I am convinced that I have discovered a remedy and method of application entirely new to poultrydom.

The faults that I and thousands of other poultrymen have found in the ordinary methods of combating these diseases are the loss of time in the necessity of administering the remedy, usually a tablet or a powder, to each infected bird; and the drawback of putting the drug into the drinking water or feed, thereby endangering the health of unaffected birds.

These faults are overcome in what I have termed the vapor system of treating all diseases of the throat and lungs of poultry. I have given the method three years' thorough trial, and have used it with complete success in the very worst attacks of roup and colds. I have also noted the absence of lice on the birds and in the houses where the vapor has been used.

The vapor treatment should appeal to the poultrymen because of its simplicity of application, if for no other reason, although it combines the following merits of being more economical than pills, tablets, powders and other forms of drugs: Perfectly harmless; beneficial to well birds and a cure for sick ones; a saver of time and work in that individual treatment is unnecessary; and positively effective.

Have your tinsmith make a strong metal tube of galvanized iron, eight inches high, six inches in diameter at the bottom and three inches in diameter at the top—just large enough so an ordinary stamped-bottom tin cup will fit in snugly up to its rolled rim after the handle is broken off. Cut out five or six holes, each one inch in diameter, about one inch from the bottom of the tube; these are to admit air to the lamp. Cut out four half-inch holes one and a half inches from the top edge. Set the tube over a small incubator lamp—one with a small wick, as very little heat is required—and fill the cup about half full of Zenoleum. A crate should be set over the whole apparatus when it is in operation so the vaporizer cannot be interfered with by the birds.

The vaporizer is set near the center of a pen eight feet by ten feet, containing twenty-five birds, and is put into operation at night after the fowls have gone to roost. The open front of the house is left open when the vaporizer is in use.

In order to determine the amount of Zenoleum necessary to each bird, the square feet of the floor space must be taken into consideration. I find that one teaspoonful to four square feet of floor space is the best proportion for the open-front house. When the vaporizer is used in a closed or semi-closed house half a teaspoonful to every four feet is sufficient.

It is best that some opening be provided in the front of a closed house for the admission of fresh air. Only enough heat should be maintained in the vaporizer to create a thin vapor.

A marked improvement in the birds will be noted within forty-eight hours after the first treatment. I have never found it necessary to use the vaporizer more than three nights in a week, and have never had to resort to more than four treatments to effect an apparently complete cure in even obstinate cases of roup. I have never found any indications of the return of the disease after application of my treatment; there is total absence of the roupy odor; and at the end of a week's treatment the eyes and the nostrils of the birds resume their natural clearness.

FOXHURST FARM

Lime Rock, Conn., U. S. A.

Butler, Mo., Oct. 17th, 1915.

Editor
Everybodys Poultry Magazine,
Dear Sir:

I enjoy very much your department "Our Bird Neighbors" in "Everybodys", the best poultry magazine published. Some hundreds of thousands of Black birds were spending last Sunday in our woods, they are the common crow-blackbird, but among them I saw several strangers, They are black-birds, but have an orange colored head and shoulders. I never saw any like them before. What are they? Tell us something about them, and oblige,

Yours very truly,
EDSON SNYDER.

* * *

Believe the birds you refer to were Red-Winged Black Birds. They have the front edge of the wings and a part of the wing-bow a firey red. These are quite common here, being particularly seen along our streams and lakes. They are migratory north of Maryland, but pass the winter as well as the summer in the southern states. Their habits, feed and breeding is very similar to the Black Bird.

H. P. S.

As a rule birds do not live very long, but they live fast. They breathe rapidly and have a higher temperature and a more rapid circulation than other vertebrates. This is a fortunate circumstance, since to generate the requisite force to sustain their active bodies a large quantity of food is necessary and as a matter of fact birds have to devote most of their waking hours to obtaining insects, seeds, berries, and other kinds of food. The activity of birds in the pursuit of insects still further stimulated by the fact that the young of most species, even those which are by no means strictly insectivorous require great quantities of animal food in the early weeks of existence so that during the summer months—the flood time of insect life—birds are compelled to redouble their attacks on insect foes to satisfy the wants of their clamorous young.

Field observations of the food habits of birds serve a useful purpose, but they are rarely accurate enough to be fully reliable. The presence of certain birds in a corn or wheat field or in an orchard, is by no means, proof, as it is too often assumed, that they are devastating the grain or fruit. They may have been attracted by insects, which unknown to the farmer or orchardist, are fast ruining his crop. Hence it has been necessary to examine the stomachs and crops of birds to ascertain definitely what and how much they eat.

The Biological Survey has in this way examined upward of 50,000 birds most of which have been obtained the last 25 years from scientific collectors for our birds are too useful to be sacrificed when it can possibly be avoided, even for the sake of obtaining data upon which to base legislation for their protection.

It is interesting to observe that hungry birds—and birds are hungry most of the time—are not content to fill their stomachs with insects or seeds, but after the stomach is stuffed until it will hold no more continue to eat till the crop or gullet is crammed. It is often the case that when the stomach is opened and the contents piled up the pile is two or three times as large as the stomach was when filled. Birds may truly said to have healthy appetites. To show the astonishing capacity of birds' stomachs and to reveal the extent to which man is indebted to birds for the destruction of noxious insects, the following facts are given as learned by stomach examinations made by the assistants of the Biological Survey:

A tree swallow's stomach was found to contain 40 entire chinch bugs and fragments of many others, besides 10 other species of insects. A bank swallow in Texas devoured 68 cotton-boll weevils, one of the worst insect pests that ever invaded the United States; and 35 cliff swal-

W. H. SAART, Mgr. MIRIMICHI POULTRY FARM Box A, FOXBORO, Mass.

lows had taken an average of 18 boll weevils. Two stomachs of pine siskins from Haywards, Cal., contained 1,900 black olive scales and 300 plant lice. A killdeer's stomach taken in November in Texas contained over 300 mosquito larvae. A flicker's stomach held 28 white grubs. A nighthawk from New York had eaten 24 clover-leaf weevils and 375 ants. Still another nighthawk had eaten 340 grasshoppers, 52 bugs, 3 beetles, 2 wasps and a spider. A boat-tailed grackle from Texas had eaten at one meal about 100 cotton boll worms, besides a few other insects. A ring-necked pheasant's crop from Washington contained 8,000 seeds of chickweed and a dandelion head. More than 72,000 seeds have been found in a single duck stomach in Louisiana in February.

A knowledge of his bird friends and enemies, therefore, is doubly important to the farmer and orchardist in order that he may protect the kinds that earn protection by their services and may drive away or destroy the others. At the present time many kinds of useful birds need direct intervention in their behalf as never before. The encroachments of civilization on timbered tracts and the methods of modern intensive cultivation by destroying or restricting breeding grounds of birds tend to diminish their ranks. The number of insect pests, on the other hand, is all the time increasing by leaps and bounds through importations from abroad and by migration from adjoining territories. Every effort, therefore, should be made to augment the numbers of our useful birds by protecting them from their enemies, by providing nesting facilities, and by furnishing them food in times of stress, especially in winter.

Important in this connection is the planting near the house, and even in out-of-the-way places on the farm of various berry-bearing shrubs, many of which are ornamental, which will supply food when snow is on the ground. Other species which are not berry eaters, like the woodpeckers, nuthatches, creepers and chickadees, can be made winter residents of many farms, even in the North, by putting out at convenient places a supply of suet, of which they and many other birds are very fond, even in summer. Hedges and thickets about the farm are important to furnish nesting sites and shelter both from the elements and from the numerous enemies of birds.

Few are aware of the difficulty often experienced by birds in obtaining water for drinking and bathing and a constant supply of water near the farmhouse will materially aid in attracting birds to the neighborhood and in keeping them there, at least till the time of migration. Shallow trays of wood or metal admirably serve the purpose, especially as birds delight to bathe in them

Considerable success has been met with in Germany and elsewhere in Europe by supplying artificial nest boxes for birds and the same method of increasing the number of birds and attracting them to farms and orchards where their services are most needed should be extensively employed in this country The experiment can the more easily be tried since several firms in the United States are now prepared to make and deliver boxes specially designed for martins, swallows, bluebirds, wrens, woodpeckers and other species The average farmer's boy, however, if provided with a few tools, is quite equal to the task of making acceptable boxes for the commoner species, which are far from fastidious as to the appearance of the box intended for their occupancy.

One of the worst foes of our native birds is the house cat, and probably none of our native wild animals destroy as many birds on the farm, particularly fledglings, as cats. The household pet is by no means blameless in this respect, for the bird-hunting instinct is strong even in the well fed tabby, but much of the loss of our feathered life is attributable to the half-starved stray, which in summer is as much at home in the groves and fields as the birds themselves. Forced to forage for their own livelihood these animals, which are almost as wild as the ancestral wildcat, inflict an appalling loss on our feathered allies and even on the smaller game birds, like the woodcock and bob white. If cats are to find place in the farmer's household, every effort should be made by carefully feeding and watching them to insure the safety of the birds. The cat without a home should be mercifully put out of the way.

THE VALUE OF A $10.00 BREEDING MALE

(Continued from Page 604)

Every one who keeps hens whether few or many should select some one variety of Standard bred fowls and breed them in their purity. Be considerate in your selection, choose the variety you prefer and improve them by care and selection—you can have the best for egg production and for market poultry both in one fowl. Choose wisely from the Standard bred kinds and you will profit thereby.

(The Oak Grove Poultry Farm)

This subject should appeal to every one who keeps a small flock of chickens, and who has not already procured a good male bird. If the purpose is to supply eggs to neighbors or to nearby markets, it is especially essential that a good male, the son of a heavy laying hen, should be purchased and mated to hens that win commendation at the nest. In this way alone can the average of the flock be maintained or increased.

It has been demonstrated that only through the male bird are heavy egg laying tendencies transmitted. That is to say, no matter what a wonderful layer a hen may be, unless she is mated to a male whose mother was a good producer, the females resulting will break no world's record as layers. If the male's mother was a low producing hen, the progeny of that male bird will possess inferior laying qualities.

To secure a breeder that possesses the ability to stamp high productive egg qualities on his female offspring, it will be necessary to pay at least ten dollars. No breeder can afford to establish a strain of heavy laying fowls and sell them for less than ten dollars each. And the nearer they conform to Standard requirements the greater will be their value.

In breeding for Standard qualities the male is also a very important factor, though perhaps not to the same degree as in transmitting egg producing tendencies. No matter what the results sought, they can be obtained only by breeding good females to males of good points and qualities.

It is self-evident that it pays to keep good stock of any kind. The man or woman who keeps a pen of females that measure well up to Standard requirements, headed by a cock bird of approved type,-etc., will have little trouble in disposing of most of the eggs for hatching purposes at from $2.00 to $5.00 a setting. In this there certainly is more profit than in selling eggs for eating purposes, though the price may be slightly higher than that obtained on the general market.

The satisfaction and pride taken in such a flock must not be overlooked. The things of which one is proud are usually given better attention and treatment; and to this better treatment, in the case of poultry, response will be made by an increased egg yield.

No matter the purpose for which you are breeding fowls, by all means get at least a ten dollar bird to head your best pen, and if possible get a still better bird. It will surely be money well spent, for the eggs and chicks produced by this mating will, in a single season, amount to many times the cost of the male.

PANAMA PACIFIC ENTRY CLOSES

Superintendent T. E. Quisenberry, of the San Francisco exhibition wires us under date of Oct. 21st, that the entry shows eight thousand entered specimens of poultry and pigeons coming from thirty-five different States with Canada also represented. Ten of the States sending car load lots. Mr. Quisenberry also informs us by his wire that the outlook is good for a wonderful exhibit of pure bred fowls, and the Panama Pacific Exhibition will go down in history as one of the World's greatest Poultry Exhibitions. Supt. Quisenberry and assistants have labored long and faithfully on the details of the exhibition and we trust that their expectations may be fulfilled.

HOW TO GET EGGS AND SAVE FEED

In another column you will see the advertisement of the Nabob Remedy Co., Box K. Gambier, Ohio. We believe that every poultry raiser should try their famous Prescription No. 4, which is being used now successfully by many of the largest egg farms. It is guaranteed to be absolutely harmless and is sold on a money back guarantee. The company have many letters like the following attesting the great value of No. 4:

40 Cash st., Portland, Maine, Aug. 28, '14

Find enclosed check for 100 pounds of Prescription No. 4. I have used successfully No. 4 for 8 months, and in that time have saved $90 in beef scrap alone. My hens are in full moult at present—earlier than ever before, and still doing business.

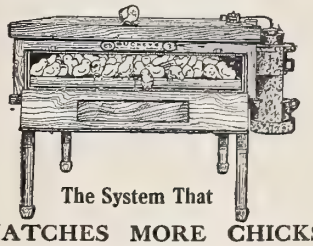
Yours truly,
Frederick O. James.

(James has just used 1000 pounds of No. 4)

Give it a fair trial and if not satisfied, they will refund your money. They have a good agency proposition which it pays all to investigate for many poultrymen have been able to pay all their expenses in this way. Write the above address for full particulars.

"Buckeye" The Standard

"The Best Incubator Made"



The System That

HATCHES MORE CHICKS AND HATCHES BETTER CHICKS

Than any other incubator regardless of size, price or method.

Recognized by the largest breeders and the largest poultry supply dealers as the safest and surest incubator ever built. Every machine a guaranteed success.

It's the Best Incubator Made

Not the cheapest incubator but the best.

It's the incubator that is built UP to a standard and not DOWN to a price. That's why the "Buckeye" is sold by more reliable dealers than all the others combined — that's why so many of the large, successful breeders will use no other. The "Buckeye" is sold by more than two thousand of the largest poultry supply dealers and there are over 400,000 in successful operation! Let us send you a list of some of the big breeders who use the "Buckeye" and their reasons for using it. Let us send you the names of the largest dealers and their reasons for selling it. Let us tell you about the wonderful success of the "Buckeye" system and why so many have tried to imitate it. The "Buckeye" is made in seven sizes—60 eggs to 600 eggs.

600 Eggs	- -	$50.00
200 Eggs	- -	17.50
110 Eggs	- -	12.50
60 Eggs	- -	7.50

SOLD ON 40 DAYS TRIAL

and guaranteed to hatch every hatchable egg.

Try a "Buckeye" in the same room with any other incubator and if it doesn't hatch more chicks and better chicks the first time you try it, we'll take it back.

Sold and guaranteed by dealers everywhere at $15.00. Insist on the "Standard" and beware of imitations. Write us for a "Standard" Catalog and we will tell you how to grow three chickens where one grew before.

The Buckeye Incubator Co. 542 Euclid Ave. Springfield, O.

"WHO CAN SHOW WHERE DOUBLE MATING HAS BEEN OF BENEFIT TO ANY VARIETY"

(Matt W. Baldwin)

Mr. Schwab has invited his clientale to give their views on the very important subject of Double Mating, and I am wondering as to whether anybody will defend the practice by argument and proof, showing that actual benefit is derived thereby.

The only defense that I have been able to obtain from such as champion the practice, is that it adds to the interest, and makes the game more intricate; that if it weren't for the need of double mating, zest would be lacking because breeding winners would be too easy.

If this is all the defense that can be made, it certainly is a very lame one. There is but one legitimate excuse for it, and that is:—"that the Standard makes it necessary."

Were the Standard to demand that for Plymouth Rocks, the male should be Barred, and the female White, we would breed Barred Rocks to produce the males, and White Rocks to produce the females; or should the Standard decide that for a new breed called the Autofords, the male should be green, and the female blue, breed of such fowl would be forced to double mate.

Fortunately the Standard for shape has not yet called for double mating; but just suppose that for Minorcas the tail of the male had to go up, and the female down; this would mean double mating for the Minorcas and would result in producing some remarkable specimens.

Blue Andalusians cannot be produced thru a single mating; aside from that one fault that breed fulfilled every obligation; no fowl is more beautiful, and its economic value the equal of any.

It's rare that we meet the Dark Brahma in the show room: Why? there's one answer; it can only be bred to Standard requirments thru double mating.

Brown Leghorns. Will anybody affirm that they are in any sense inferior to any other fowl in the Mediterranean class? In our childhood days. if anybody spoke of the little brown hen, they were speaking of the hen which represented the best there was; it was the best loved hen; the hen that could be relied upon to lay the egg that was necessary for the success of the morning; then the Standard took her in hand, and insisted that she should not be related to the male who is shown as her brother; so she dropped into the discard.

Does anybody know of a more beautiful and useful bird than the Partridge Wyandotte? Maybe there is such, but I'd need a lot of persuading before being convinced; it also is going the same road as the many others that have been forced into double mating.

There is no need to use further illustrations; the same story could be told of several others. and in none of them can be found any legitimate cause for their loss of popularity other than the "Need" to double mate.

The grave of any variety has been dug just as soon as a Standard has been published which will not permit its perpetuation thru a single mating.

Why then have Barred Plymouth Rocks survived, and held to the top place for the last twenty or thirty years?

I might easily state that it is because of their superior economic value, but that would not be just to the little brown hen, the Andalusian, the Dark Brahma, the Partridge Wyandotte and many others; none of them have lost out owing to any fault in utility quality. Barred Rocks have survived in spite of the Standard, simply because from a date something like thirty years past they have been bred in "TWO SINGLE MATINGS;" these matings are sharply defined, and easily described; dark bred to dark, light bred to light; the simplicity of the description is the saving clause. Try to describe the method employed in double mating pencilled or laced varities; it will take about five hundred words, and your audience needs the text constantly at hand for references, for it does not remember a score of words ten minutes.

Eliminate Barred Rocks from the list of double mated varities, for they are two varities, and have been bred as such for many years; breeders have taken the matter entirely out of the range of the Standard so far as breeding is concerned, and ultimately the Standard will be shaped to conform with the correct breeding characteristics.

While the Standard is intended to properly describe Perfection, it has constantly made the mistake of describing somebodys' Ideal; an Ideal can be something, and also nothing; anybody can have one, and nobody else wants it; double mating calls for an Ideal male, and an Ideal female; their relationship has nothing to do with the case; each has to be so-and-so without regard to the natural color of each sex.

The progeny of the exhibition male, mated to the exhibition female, the two specimens having been produced thru the double mating process, have no value as exhibition specimens, and no value as producers of exhibition stock; they are equal in value to the chicks which are bred by what is known as the dung-hill process, and should be sold at a few cents per pound, for they have no breeding value as Standard fowl; just think, the progeny of the New York winning male and female in about a dozen varities has no greater breeding value than any scrub flock.

Nothing more absured has ever been foisted on a much beguiled public. It has been declared by our only authority, that the sexes of our show birds must not be related; brother and sister cannot be shown in the same variety; nor mother and son, nor sire and daughter.

Funny old Standard, isn't it?

Dutton's Niagara Strain S. C. and R. C. Rhode Island Reds

will have for sale in December Single and Rose Comb Cockerels and Pullets. Bred from my winners. Birds sold on approval. State your wants.

If You Want the Dawn of the Show Season To Find You Equipped Satisfactorily, Buy

INGOBAR

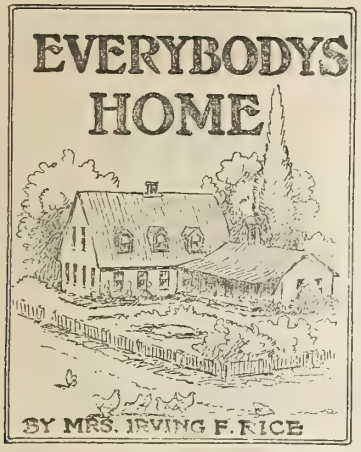
BARRED PLYMOUTH ROCKS

You can easily spend a great deal more money to fill out your Show String than INGOBARS will cost you, but you cannot buy better bred, more vigorous or finer barred birds at any price.

The 1915 crop of INGOBARS tell their own story of quality; fine balance and general fitness to win in any competition.

An inspection of one or more birds, at your leisure, will convince you of their worth. An early booking is suggested.

Canandaigua—J. W. CHAPMAN—New York



I HAD expected to be able to say something interesting and helpful this month, concerning poultry and poultry conditions through the west, but as yet, I have not visited the large poultry plants on the coast and I am forced to say that what poultry *I* did see en-route, were a much misused and poorly cared for variety. They were easily twenty-five years behind the poorest farm flocks to be found in New York State. It would require one with greater poultry wisdom and keener sight than I possess to figure out the variety or varieties from which they desended. In color, they very much resembled "Davids Coat of many Colors." They were very poorly cared for and looked as though the profits accruing from them would be very small indeed. I was interested in the prices of eggs and poultry in the different cities in which I stopped. The price of eggs has been lower than the New York Markets while the price of dressed poultry is considerably higher. This was proof conclusive to me that the most of the eggs were cold storage eggs. In Ogden, Utah, where I spent several days there was considerable local enthusiasm along poultry lines. They unite with Salt Lake City which is only 30 miles distant, and annually have a poultry show and it seemed to me that they should be able to have very good quality, and it also looked to me like a good place for the industry. Salt Lake City and even Los Angeles which is about twelve or eighteen hours ride from Salt Lake City should provide good markets for the surplus which Ogden could not use. The climatic conditions are very favorable. The soil is sand which is almost ideal, alfalfa grows in great abundance and fowls can have their liberty the year round. Crops grow phenomenally. I was shown corn which was planted June 21st and which had grown and been harvested without a drop of rain and upon a field which had not been irrigated and never have I seen eastern corn of any variety which could equal it. Of course all green food must be supplied. The poultry yards are simply sand piles and I actually felt sorry for the poor deluded fowls, who according to nature were busily engaged in scratching the sand, always hoping to find a good fat eastern worm, but who, I very much fear met with disappointment. However, it was very easy scratching and gave them good exercise.

It was interesting, and still not with pathos to find that each abode and hut on the desert and pairie had its small flock of mongrel hens and my sympathies went out in a measure, to the poultry and women. I say "in a measure" because I have no patience with a woman so passive who, will live in such places and under such terrible conditions, and a man who will take a woman to live in such a place is devoid of the smallest atom of manhood. I have always held to the old fashioned idea of women being of the clinging vine order of femininity, but my opinion of this subject changed materially after two or three days ride through this country. The world has a living for us all and if we have any energy and ambition at all it is not necessary to eke ont an existance either on a prairie or desert.

A friend took me out to visit a large poultry plant near Pasadena recently. It was managed and owned by a German who was combining fruit and poultry and judging from the reports and general appearance of the ranch it must be profitable. He had five thousand layers which were kept in small yards or runs made in an Orange grove, each run had an iron pipe with running water and a small roosting house. The buildings were very cheap and easily built and this is all that was required owng to the climate.

It was October 27th, when I was there and the mercury said 94 degrees. The fowls were standing with wings outstretched. Alfalfa is supplied for green food and dry mash in troughs supplied two meals each day, grain being given for the night meal. The mash was very much like our own formula with the exception that only nineteen percent meat food was used, this proportion would be considered very light in the east. The fields were covered with feathers as the birds were in their moult, but taken as a whole they were exceptionally good. A flock of young cockerels were really very good and I was led to believe that the owner himself did not know just how good they were, at any rate his conception of his best birds differed greatly from mine although I did not so inform him. He grew oranges, lemons, and peaches and single comb White Leghorns and looked prosperous.

Grain prices are very much the same here in Los Angeles as in New York State and the weather would seem to be adapted to the rearing of chicks. Never-the-less, there are very few poultry farms in this vicinity. Land is too valuable perhaps, but there are thousand of acres of waste land, or rather idle land surrounding the city, and adjacent trolley lines which might be used to good advantage in this way. Of course all land must be irrigated as there has not been a drop of rain since last April and those lands which have not been irrigated are brown and bare, but very soon the rain will come in torrents and for about two weeks every street and gutter and every lot will be flooded and then these bare lots and mountain sides will be green with a self sowed crop of wild oats. This is a much nicer way of sowing "wild oats" than the eastern men have discovered and I have reason to believe that the crop is much more satisfactory to the reaper.

Helpful Hints and Recipes will be omitted this month but will be resumed in the next issue.

WHEN writing advertisers always mention that you saw their advertisement in "Everybodys." This will be to our mutual advantage. Do this so we may have the credit due to us.. Please don't forget this.

MOUNT AIRY S. C. WHITE ORPINGTONS

THE 1915 HAGERSTOWN CHAMPIONS

Our First Exhibit at Hagerstown's Famous Show has established a New Show Record that stands unparalleled, "The Best Ever Made." In type, color and general merit. Supreme in every department. They won Cock, First; Hen, First and Third; Cockerels, First, Fourth and Fifth; Pullet, First, Third and Fourth; Old Pen, First; Young Pen, First. Champion Male, Champion Female. Best Display, Etc.

STOCK FOR SALE

We offer you selected stock from our Best Blood Lines for Exhibition and choice Breeding that will prove reliable and the proper foundation to build upon for Poultry Success.

EGGS FOR HATCHING

Our 1916 matings will be superior in quality, made with confidence in line and breeding values, with results assured. Be sure to get our Catalogue and Mating List.

We assure Perfect Satisfaction to All.

RAMBLING RABBIT RUMBLINGS

NOW that the show season is opening up, we will expect to see quite a turn out and we would suggest that all those who are interested, to see the executive committee, and have them, where not arranged for before, to have the rabbit placed in their proper class and see that they have recognition.

It is remarkable, the interest that the rabbit has created in the past few years, then it was a pastime and play for a few boys, now look, see who is interested, go to any of the branch associations, and you will see men from all walks of life and of every vocation, interested and all trying to have something better than his brother fancier.

Then one dollar was considered a big price for a rabbit, now fine specimens of the Flemish Giants and New Zealands, bring from $5.00 to $25.00 each and are taken up as fast as they can be procured.

The red Belgians seem to be the main standby, but as the other breeds are being seen they are rapidly forging to the front, and are now in more demand than the red Belgians, still a red Belgian in prime condition, that is good cherry red color with rich creamy belly, small strait, front feet good colored hind feet, a straight tail, and best of all red on the hips, brings a good price, while the fat short light grays and white hind feet are the ones that are being sold as cheaper rabbits.

Too many think that all rabbits are rabbits, and all chickens are chickens. If we had a fine chicken fancier among us raising thoroughbred Plymouth Rocks, and some one should send to him for a fine cockerel; well he happens to be out, but his neighbor has some common Plymouth Rock cockerels, but just fat chickens, and he gets one from him and sends it to his customer; well what follows, as soon as it arrives, his customer knows he has just received a chicken, altho in fat prime condition, it still is a chicken, such is the case with rabbits because you have a fat rabbit, is no saying that you have a fine one, as they have their points as well as thoroughbred poultry, and the standard is a strict and as hard to breed up to as the chicken.

All we older fanciers have been breeding and culling for years to obtain a type as near perfection as possible, that is the object of our National Association, with their licensed Judges, Judges who have gained their experience by years of constant breeding, not theory, but practice, and our Association now has almost reached the thousandth mark, and still going some.

National shows are being held all over the country. The one to be held at Pikes Peak, Colo., will have close to eight hundred entries.

Quite a number of shows are to be held the coming winter throughout Ohio, and Michigan will hold them all over the state.

What are the Flemish Giant rabbits? We recently received a letter for a Flemish Giant buck that was not under twenty-four pounds, now that would have been a GIANT all right, but we told him we were raising rabbits not elephants.

You will find more mature Flemish Giants under eleven pounds than you will above it, twelve pounders, are extra good and scarce, while thirteen pounders are few and far between, and if a breeder has one that goes to fourteen pounds, he is worth almost his weight in gold, and those fifteen to eighteen pounders are either dead ones or paper rabbits, they simply don't exist, or if they do we have not had the pleasure to see one, either in the show room or the hutch. Now as to color, the National standard recognizes but one color for the Flemish, a dark steel gray, and we have as many shades of grey as you have of red in the Belgian, but we are striving for a rich steel gray, not too black, nor too much rust in the coat, by rust, we mean brown or reddish hair scattered through them. The large jet blacks, formerly classed as Flemish, are now classed as selfs, that is a solid color, they also come in the pure white just as large, with a large bold pink eye, the standard calls for ten and half pounds, at six months of age, that is what we are all striving for, but do not be discouraged if you do not obtain it. The standard is kept high, so there is something to strive for. Almost anyone can raise an eight pound Flemish, but few get them above eleven.

So keep on and do not get discouraged, and if you are only a boy, perhaps you may be the one to get the extra large one, the fewer you let your mother doe raise, the larger they will be. Does it not stand to reason she will have them twice as good if you let her raise but four in-

300 EGG INCUBATOR ONLY COST $4.00

We can fit you out in most any class for strong competition at a price that will be satisfactory. Eleven years with Orpingtons exclusively.

E. M. LONG : : Box E : : OSCEOLA, IND.

stead of eight? We have seen people try to let the mother doe raise ten and eleven, then wonder why they look puny and do not grow good and seem to lack vitality, perhaps they were weaned at four or five weeks old. The longer you let your young run with the mother the better they will be. We generally let the doe raise five to seven and let them run with her until eight to ten weeks. Again you will find that some does are a great deal better mothers than others, and when you do that is the doe you want to keep.

Now what is the New Zealand rabbit? Well, he is the coming meat or market rabbit, larger than the Red Belgian, and a little smaller than the Flemish, being more round and compact. Standard calls for ten pounds at maturity. They are a beautiful buff orange color, and always take the eye of the beginner, as a very handsome animal. One advantage they have over the others, they do not eat near as much and are always fat and take on flesh rapidly, as they are not so full of vim as the other breeds. After four to five months old, they set round most of the time, and are called the lazy rabbit. Young bucks can run together longer than any other breed before fighting, generally until five months or older, while Red Belgians and the Flemish should be separated by the time they are four months old or they may get excited some time, then the fur will fly, and if they get into the right kind of a fight, they are seldom much good afterwards.

The variety of the rabbit is only a matter of personal taste, all have their admirers, and all are profitable, if handled right, but if given no care, they soon become nothing but rabbits, any variety will soon grow to know you and soon become ideal pets. They multiply much faster than the chicken, and where ever eaten are again in demand. The Flemish and New Zealand are ready for a fine fry at from ten to twelve weeks of age, and at four months is quite a large fellow, making more than the chicken at same age, and not costing near as much. That is why he is here to stay, more meat at less cost, very delicious. They are a very clean animal, raised in small quarters, in town as well as the country, and when once raised, we are never satisfied unless we have a pair or two around.

THE ORNAMENTAL PIGEON

(Marion F. Rittenhouse)

The growing recognition of the fact that pigeons are ornamental as well as edible is being demonstrated by those in authority in the two great Western Exposition at San Francisco and San Diego.

At San Diego some eighteen months age, 150 pigeons were brought to the Exposition gounds, where they at once contentedly set up housekeeping in the commodious apartments which the lofty towers and broad cornices of the fair buildings afforded. Since then, that flock has increased to more than 2000, of which probably more than half are the descendents of the original flock, while the remaining increase has been prompted by their gregarious instinct, which in them is more strongly developed than in any other bird or beast, so the naturalists tell us—to desert their more quiet homes for the livelier social whirl of the above mentioned cornices and towers.

And also, as they are greedy creatures, they have been attracted by grain which is scattered for them some half dozen times each day, by a young Spanish boy, who is their caretaker, and with whom they are on extremely familiar, friendly terms.

A large colony of pigeons have been recently domiciled upon the San Francisco Exposition grounds, where they wheel and circle about among the lofty arches had broad cornices, apperently very comfortable and happy in their novel new home.

A Western pigeon fancier tells me has a steadily increasing demand for the more ornamental, showier breeds among large country place owners, who see in them an ornamental, useful adjunct to their homes. Finding them less troublesome, and much hardier than the average ornamental fowl.

UTILITY CRAZE

(Continued From Page 611)

his best and most consistent layers he naturally selects their offspring as the bases for the flock. The use of males bred from females of high production has been found very beneficial and is a comparatively new discovery in the poultry line and it is found that the employment of such males upon related blood results in almost every case in an increased yield of eggs, but strange as it may seem, it appears also to be a fact that the progeny of the first crosses of good egg laying breeds are heavy producers of eggs. These mongrel chickens apparently are given new life and strength by the new blood which has been incorporated and have given most credible records in a number of yards, but after the first cross these high-breds fail There is no substance or stability to the strain. Instead of being line bred it is out-bred; instead of having any purity it is entirely impure, and instead of reproducing tself it goes to pieces with incredible rapidity; but the same temptation is present with the man who has by these first crosss succeeded in producng a flock of pullets which are shown to be heavy egg layers. He wants to sell his pullets to the public. His pullets are in fact good layers. He either does not know or does not care what they in turn will produce and he, therefore, jumps into the advertising field and in glaring type, advertises his product as the "Great Utility Strain" or the "Marvelous Layers," or some such high sounding term, but these birds in fact are not "Utility" chickens. Unfortunately, they will not live for ever and will not lay as many eggs when they are five years old as they did when they were two. Unfortunately their offspring (not having any pure basic blood) does not produce as well as the parents or anything like it and the end of the whole matter is that the purchaser of this kind of "Utility" poultry is "stung," and must begin all over again. The longer we breed the more importance we place upon the ancestors back of our strain. The further we go into the question of egg production the more we learn that this question of ancestry is the paramount and leading principle involved. We must have pure blood which can only come from pure bred ancestors and the more of this pure blood from good layers we can get into our egg flocks the better they will lay. If we resort to a cross from some other strain the first and immediate results are always bad and we are almost put back into the place where we started. In other words, the only way to build up an egg laying strain of fowls is by systematic, conscientious and absolute line breeding and the man who advertises "Utility" layers, when in fact he is selling a cross-bred chicken, that is a fowl which is the product of the crossing of one established strain upon another, is deceiving the public and himself and his chickens are not good, but all this the public does not understand and it will be many years before it does, so we find that the sale of cockerels from a heavy egg laying strain is always good, whether the cockerels are intended to be mated with any thing which is related to them in blood or not. Sometimes the result of using a male of this character is good, especially if he is again bred back to his own offspring and a strain thereby established, but in most cases results are disastrous for the blood back of the cockerel is absolutely unrelated to any of the blood back of the females. All of us receive letters frequently throughout the year running about as follows:

"I enclose ——— dollars for which please send me a male not in any way related to the females you sold me last year."

A HIGH-GRADE
TESTING THERMOMETER

WITH A COPY OF MY NEW BOOK

"An Analysis of Successful Hatching Practice"

A TESTING THERMOMETER as accurate as a "Physician's Guaranteed," but of a type easy to read and available for use in hatching, is what you have been looking for. Instrument Makers have widely advertised as something of special value their regular run of thermometers, which they make in a wholesale way for Incubator Mfgrs, and and the Supply Trade. I have had sent to me for testing, thermometers that were "Guaranteed Correct within the needs of incubation," but which were off 2½ egrees.

Yet an accurate thermometer is the one most essential factor in incubation. A wrong temperature will make all the other good features of an incubator valueless. Experienced operators cherish their old and tried thermometers as they do their prize-winning stock. Get a trustworthy thermometer and improve your hatches.

My Autograph Thermometer is guaranteed accurate within 1-10 of one degree, which is as close as the average eyesight reads. An open scale and large mercury column make it Easy Reading, – a valuable factor. Try one and you will use no other. Order early as they are made with great care and the output is limited

PRICE $1.00

I wrote INCUBATION and ITS NATURAL LAWS 22 years ago. It was the first authoritative treatise on the subject, and for many years the only text book, but it is now out of print. Instead of rewriting it I have concluded to prepare an "Analysis of Successful Hatching Practice," because it will be more useful to the seasoned operator and the beginner as well. This, my latest book, is now ready; and in addition to the scientific treatment of incubator operating I have included many little tricks of experts.

The heat treatment is gone into exhaustively, and it is shown why this is the most important factor in incubation. The moisture question is also covered fully, and a conprehensive analysis of the effect of the various systems, and their intimate relation to the heat treatment. One system is given for which certain large duck breeders paid $1,000.00 each a few years ago.

It is in the "Reason Why" that this booklet will be most helpful. When you know why you are following a certain practice, and why variations from that practice produce certain effects, you can operate intelligently and not blindly. This knowledge will save you much perplexity, and many chicks.

PRICE 50 CENTS

BOTH TOGETHER, POST PAID, $1.00

BUFFALO INCUBATOR CO. 484 DEWITT ST., BUFFALO, N Y.

would be impossible. All of the birds are related in a greater or lesser degree, and if we send the male as speci fied we would know that the purchaser would have little or no success from his use. Thus the breeder has no right to advertise "Utility" layers unless they really are "Utility" layers. He should first advertise a strain bred to for three or four generations at least, then make his claim that his flock is a high producing one from the standpoint of eggs and we believe such a strain should be advertised as an egg strain or heavy egg producers and not by the mere use of the word "Utility."

This word "Utility" in relation to egg types should be handled just as carefully as with reference to beef types. If we have established a heavy producing line we have a right to claim that they are such and as such they are certainly "Utility" but "Utility" along one line only, viz: egg production, further, with reference to egg production, it has been proven time and time again that there is no such thing as a fixed or established egg type. Some claims have been made that a very long body with a very high tail and a very large comb on a Leghorn spell egg production. The use of the trap nest has finally disposed of this false theory. A hen may be long and rangy and may lay no eggs at all or be a very poor layer and again a hen may be short and thick, but deep and she will be the greatest egg layer in the flock. All that is necessary is specialization along the proper blood lines. It must carry a preponderence of the blood of the good layer before she can lay well and all of the progeny from a good layer will not equal their mother. The physical requirements for heavy egg production must be a sufficiently large or ample body to contain generous reproductive organs and if a hen has this body no matter what the shape may be, and in addition has good health, it is perfectly possible for her to lay an unusual number of marketable eggs. So in connection with egg types the word "Utility" must be limited. It must be used with caution. It cannot be applied to mongrel crosses and the public should wake up to the fact that the man who produces a strain which really does produce good layers is a specialist of the highest degree. Before being trapped or caught by the man who uses the word "Utility" too broadly, we should investigate his claims and see whether in fact they have any real merit, and the writer of these lines will always contend that the committee in charge of any Egg Laying Contest should, before it receives an entry, establish the fact that either the birds are actually pure bred or else advertise them as crosses or mongrels. This has not been the case in the past, for according to our opinion a number of entries in such contests have been allowed to go through with Standard bred names attached to them when in fact they were the rankest kind of mongrels.

If we want to buy mongrels we are, of course, at liberty to do so, but these are not "Utility" chickens, because the have no bases of blood which will hold them up in the future to the Standard required, but if we purchase Standard bred fowls we know at least that the blood is pure and that there is a possibliity by selection and care of continuing the strain up to the Standard which is claimed for it.

A MILLION DOLLAR DEAL

A few years ago Dr. S. B. Smith, of Cleveland, started a very modest day-old chick business, and met with such remarkable success, that inside of two years he was using a capacity of 150,000 eggs. His plant just grew by leaps and bounds, and before he realized it, the Doctor was having considerable trouble in looking after the chicks which were waiting for shipment. When one stops to consider that he was hatching from 35,000 to 40,000 chicks a week, it is not hard to understand that he had some job on his hands.

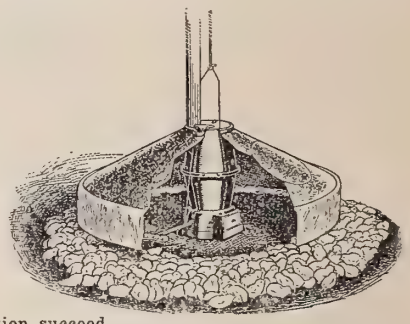
Well, he tried a lot of different brooders with more or less success, but none of them were doing the work as he thought it should be done, and finally, in desperation, he started to work out some ideas of his own. The Doctor is a thoroughly practical fellow and his long experience in the laboratory stood him in pretty good stead, with the result, that after two years of constant experiment, he perfected a coal-burning brooder that was as simple as A. B. C., and eliminated all the objectionable features he had found in the other coal burners which he had tried.

After perfecting the brooder, the doctor had a number of them made for his own use, and they attracted the attention of everybody who went to the hatchery. Their absolute simplicity and perfect action appealed to every practical man who saw them, with the result that he was first compelled to have a few made for his own customers, then a lot more for their friends, and before he knew it he had sold over 500 of them. In the meantime his friends were urging him to put it on the market, and with that thought in mind he took it to the Madison Square Garden Show, where he sold 115 of them to the largest and most experienced breeders in the country during the five days of the show. By having his brooder in operation at the show he was able to give the visitors and exhibitors a practical demonstration of its superiority over any coal-burning brooder they had ever seen.

While attending the Madison Square Show, Dr. Smith met Mr. Geo. Cugley, who is president of The Buckeye Incubator Company, and Mr. Cugley was so impressed with tha Standard Colony Brooder that he arranged for its sale with The Cugley & Mullen Company, of Philadelphia, of which he is also President. Mr. Cugley's retail store had such a remarkable experience with the Standard Brooder that within three months Dr. Smith was just swamped with orders that he could not fill, and as the Doctor was not in the real manufacturing business, he soon realized that he had a bigger thing than he could handle with his day-old chick business and the brooder business too. One of them was enough to keep a good-sized organization busy, and with the Doctor's natural love for the chickens, it didn't take him long to decide which he would stick to.

When he decided to get somebody else to look after the brooder business, he very naturally turned to Mr. Cugley, and it took them just about half an hour to arrange a contract that involves over a million dollars' worth of brooders. The Buckeye Company was given the exclusive right to sell the "Standard" brooder, and the Doctor will devote his attention to his big hatchery. The Buckeye Company contracted to sell at least 10,000 brooders a year for a period of ten years, and the Doctor has the satisfaction of knowing that he not only made it possible for the poultry men of this country to procure a wonderful brooder that cares for 100 or 1500 chicks, at $15.00, but at the same time he will be receiving a very comfortable consideration in the way of royalties.

Since the Standard Brooder wes shown at Madison Square Garden, there have been five or six imitations appear on the market, but a close examination shows that they have only been made to "look" like the Standard Of course it goes without saying that no imitation is as good as the original, but it is flattering to Dr. Smith to know that he invented a brooder that at least six regular brooder manufacturers tried to imitate. Just as soon as the Doctor gets all his patent papers he will take the imitators into Court and stop their illegal business, but in the meantime they are more likely to fail of their own weight, as I never yet saw an imitation succeed.



All hail to Dr Smith!
This is the Standard Colony Brooder Invented by Dr. S. B. Smith.

BANGING

Away in the advertising columns of "Everybodys" will find you customers for all you have to sell. Don't take our our word for it, try it.

MAKING POULTRY PAY

depends more on the knowledge you have of Poultry Culture than on expensive equipment or extensive space.

Let Director Quisenberry teach you how to make a good living and a nice profit from a flock of thrifty hens.

If you want to save money and make money in the poultry business write us today for our large illustrated Free Book, "Dollars and Sense in the Poultry Business."

NOTICE—We ask our readers to correspond with Miss Minora Pomeroy, Scotch Plains, N. J., and to aid in making this department one of special interest and value.

THE WHITE PEKIN DUCK

FOR many years the White Pekin duck has held sway over all other breeds for a market duck. Let us visit some of our large duck farms and learn of the great American duck industry. We will go to Long Island, where as far as the eye can see stretches yard after yard of the Mammoth White Pekin ducks. At a glance we can see over twenty-five thousand birds swimming in the water. Or we can go farther inland where no swimming water is available, but where large duck farms have been in operation twenty-five to thirty years. Many owners tell us they grow twenty thousand ducks a year. Others produce over fifty thousand and a few even more. And all of these are Pekins! The industry has grown from where in 1892 a few thousand ducks were marketed, today the outfit of one farm alone exceeds 75,000. What has caused such a growth?

Until 1860, the White Mucovies were the only market ducks raised in any quantity in America. At that time the hatching was entirely dependent upon the old mother hens and the ducks themselves. In 1875, the White Pekin duck was brought over from England, whence it had recently come from China. In appearance and size it pleased the American public, but its increase was limited because the ducks would not hatch or rear their own young. This was but a temporary setback, for a few years later artificial methods of incubating sprang into prominence and they carried forward with them the Pekin duck industry.

What points of superiority has this breed over all other breeds! Many. First, these ducks are of a gentle, docile disposition and can be grown and kept in large flocks, without the customary cock fighting. Second, they do not fly, so a three foot wire fence will be sufficient for all yarding purposes. Third, they are good layers, averaging one hundred eggs or more a year. They never set, and so save the time that other breeds spend hatching and raising young. Fourth, the ducklings can be hatched in twenty-eight days, where a Muscovy takes thirty-five, and they can be ready for market when ten weeks old. Fifth, when dressed the carcasses please the fastidious public, with whom looks count above everything else. Their bright, yellow bills, orange legs, and plump yellowish flesh, together with the uniform size of the dressed birds, seem to meet every requirement. And last, but not least, they maintain their high reputation on the table, until only the bones are left to tell the tale.

Besides the meat, the feathers bring in good returns. On some duck ranches they are stored in rooms and dried by having warm air blown through them. On smaller farms they are put in bags, and hung on lines in the sun, where with an occasional shake they soon dry out and can be used in the home or taken to market. They bring a price a little lower than the geese feathers.

Large duck farms flourish wherever the market is good. In the East the New York, Philadelphia and Baltimore markets handle thousands of birds, as do also the large western cities. But aside from the exclusive duck farms there are many farms combining chickens and ducks. These always can find a good market near at hand, and as one good bird will ever create the desire for more, so the markets are being daily increased.

Is it not strange that in the face of these facts, so many people, and so many poultry journals are neglecting this important branch of the poultry industry?

Fall Management of Ducks

So many beginners have written me about the fall management of their ducks that I think a few simple directions here might be appreciated.

I take for granted that you have selected your breeders for next spring before this. If not, pick out the largest, strongest looking specimens—the birds that have made the most rapid growth this year. For Pekins select for length and depth of body, with good full breast.

The drakes of all breeds can be easily told in that they have a few stiff, curled feathers in their tails, and their voices are much softer than those of the ducks.

Do not plan to breed birds which are closely related—that is to inbreed. It will result in a lack of fertility of the eggs and a loss in vitality and size of both ducklings and goslings next year. If new stock is to be purchased buy it now! Much better selection may be had and prices lower than in the spring. Very few breeders carry surplus sales stock over the winter. Ducks take longer to mate up than chickens do, so unless this is arranged very soon, fertility will not be assured.

As a general rule, Muscovies or Pekins are mated three or four ducks to one drake. Indian Runners five to seven ducks to one drake; geese two to four geese to one gander.

For housing ducks, any dry shelter free from dranghts will suffice. If a house is not available, a shed facing the southeast will answer all purposes. The building must be large enough for them to exercise in when the snow is deep or the ground icy, and it must be so arranged that the birds can be kept shut in when desired.

We have found a good ration for the ducks which are to be kept for next year's breeders, and from which we do not want eggs until late in January, to be composed as follows:—By measure,—three parts wheat bran, one part middlings or low grade flour, one part corn meal, one part steamed alfalfa or clover, one-half part beef scrap, and 5 per cent sand. Moisten with cold water. Almost any vegetable either raw or cooked may be chopped and substituted for the alfalfa if desired. Feed all the ducks will eat of this mash morning and night, occasionally substituting grain feedings.

Rations for Indian Runners, or any breed which is being forced for egg production should contain at least 20 per cent beef scrap.

For fattening ducks change the ration to two measures corn meal, two measures middlings, one measure bran, one measure green stuff, 10 per cent. beef scrap and 5 per cent. sand.

Direct From Factory To You

THE HAVANA PEACH— A cigar you will truly enjoy. Londres shape 5 inches long. A delightful blend of Imported Havana leaf and fine domestic tobacco. Sumatra wrapper. A cigar that will please the taste of the most fastidious. **A box of 50—$2.00.**

THE BROOKLYN N. Y. SHOW

A Classy Fanciers Show—Good Quality and Birds Nicely Displayed—Brooklyn Show Will Make A Leader — Management in Reliable Hands.—H. P. Schwab.

The Poultry Fanciers' Association of Long Island, N. Y., has held its first Brooklyn Show and its fourth annual exhibit. Their previous shows were held at Mineola, N. Y. The entries do not cover as many as we hoped for, but the exhibitors were fanciers and in all classes competition was keen and interest ran high. The Show Management strongly appealed to us; the members and officers are true dyed-in-the-wool fanciers and breeders, for whom we have the kindest regard and wish them well. The show was grandly cooped, was clean and the exhibits had the best of attention.

The entries of all classes totalled 1624. Many of the classes were very strong,—those of the Reds, S. C. White Leghorns, Barred, White and Buff Rocks, Black Minorcas and all Orpingtons, particularly so.

In Barred Rocks, the winners were of fine quality, evenness of color and nicely barred. First Cock, First Hen, First and Second Cockerels and the five winning Pullets were better than usual.

F. H. Hazlett, Newburgh, N. Y., won Cockerel 1 and 2; J. R. Jensen won Pen 1, Cock 3-5, Hen 2-5, Cockerel 3, Pullet 3-4; F. P. Seaman won Hen 1, Pullet 1-2; J. M. Bennett, Cock 1.

White Rocks, fine shape and rare condition. All winners beautiful. Greentree Poultry Farm, Cock 1, Hen 2, Cockerel 3-4, Pullet 2, Pen 2, F. M. Harding, Hen 1, Cockerel 1-5, Pullet 1, Pen 1.

Buff Rocks well shown, first Cock and first Pullet the best birds. C. V. Reeve, C. W. Everett, D. S. Ricker and F. D. Avella, the leading winners.

Partridge Rocks, a good class, but small.

Silver Wyandottes well represented.

Columbian Wyandottes, a strong class, winners nice. So were the Partridge. Males extra fine color and markings.

Rhode Island Reds in both Combs were among the largest and best classes at the show. In single's first Hen was the class, closely followed by first Pullet and Cockerel. The winning hen was a brilliant red, sound all over and pretty shape, fine head, etc. Pullets very strong, Cockerels fine. In Rose Combs, First Cockerel stood out strong as a winner, also winning the A. P. A. Special for Best Cockerel in the entire show.

The Orchard Farms, Noroton Heights, Conn., have every reason to crack up their line of birds. For some years they have made splendid records. Here they made close to a sweep and richly deserved all they won. In singles, they won Cocks 2-4-5; Hens 1-2-4-5, Cockerel 2; Pullets 1-2-5; Old Pen 1-2; Young Pen 1. Also special and Color Female (First Hen.) In Rose Combs, Cocks 1-2; Hens 1-2-3-5; Cockerels 1-5, Pullets 1-2. Old Pen 1-2, Young Pen 1. Special for best Cockerel in show, shape and color, male and female. Other winners were R. H. Wilcox, first Cock and shape special, D. B. Tod, H. D. Bixby, E. H. Goodwin, Old Honesty Farms, Allendale Poultry Farm, F. H. Molineaux, H. Smith, G. A. Dureasel and J. F. Davidson, Jr.

Grand quality was seen in S. C. White Leghorns, the winning pens extra fine. Among the winners were Edgewood Farms, W. M. Jones, Forest Farm and Mrs. M. D. Rutter.

S. C. Black Minorcas, a beauty class, well shown, the best of quality in males, First Cockerel a rare one, typical head. Winners were C. E. Rich, A. G. Dauch, H. H. Lott, J. T. Tucker, H. L. Bretz and J. J. Hall.

The Orpington classes were well filled,Buffs, good color, extra fine type and size and good heads. Winners: Ingleside Poultry Farm, Harry Lee, A. H. Parson, and C. L. Weelander. Whites,—in males extra strong, winners: Jill Poultry Farm, E. W. Rogers, C. L. Wellander, W. C. Fenstermaker, F. Karls.

Black Orpingtons, for real quality, were hard to beat. The First Cockerel was the gem of all the Orpingtons classes. He also won the "Spratts Cup."

In this Beauty Class, Silas H. Andrews, Mineola, N. Y., won Hen 1-3, Cockerel 1-2, Pullet 1-2. This line shows the best of color and make up, style fine, so are the combs and heads. The First Cockerel for style and finish was a good one and was a strong contender for the A. P. A. Cup;—color of the best, strong and vigorous.

Black Cornish was a beauty lot. The winners were fit to show in any competition.

Campines in Silver, a particularly large class, with many birds seen at their best; the Martling Hennery, Ridgefield, N. J., were prominent winners, with a winning line.

Pigeons numbered 486, Rabbits and Hares 200, Cavies 122,—completing a show of evenness with all varieties and classes well shown. Brooklyn has the making of a great show,—a Fancier's Show, and we look to it to make good for it has everything in its favor.

Will You Do This?

When writing advertisers, mention "Everybodys." Thanks.

Parks' Bred-To-Lay Barred Ply. Rocks

Are America's oldest and greatest laying strain. Winners in two 1915 Laying Contests. Bred close enough to Standard to win blue at Youngstown, Ohio, Wheeling, W. Va. Elgin, Ill., Utica, N. Y., Etc.

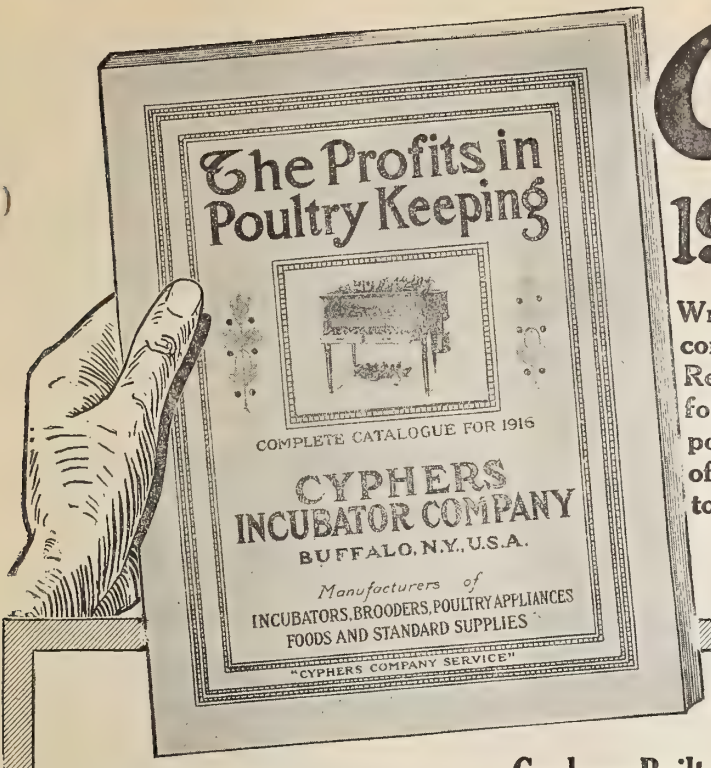
Cyphers Co's

1916 Year-Book FREE



Write us at once and get YOUR copy of this big, complete, illustrated Guide for Poultry Raisers. Read the splendid opportunities there are NOW for making big profits with poultry. Learn the importance of using the best equipment. Get our offer on Cyphers-built, Popular-priced Incubators, Brooders and dependable Poultry Supplies.

To Poultry Keepers Everywhere:—

NOW is your best chance to build up an independent, money-making poultry business. Opportunities like the present may not come to you again. Money is plentiful—factories are busy—prices of poultry and eggs are advancing—the demand is growing—grain prices are low. Profitable prices and an unlimited market await you.

Start Now—but Start Right

Don't handicap yourself by using inferior, trouble-making equipment—especially avoid incubators with nothing to recommend them but low prices—incubators that cannot produce the big hatches you have a right to expect, and that will be a continued source of anxiety and loss to you.

Don't take chances. Cyphers-built Incubators are *standard hatchers* the world over. Are *guaranteed* to hatch better, last longer, require less attention and produce larger and stronger chicks than other machines.

Cyphers-Built Incubators $12 to $40

Three Styles—Eight Sizes

Whatever style of incubator you prefer—whether hot-air or hot-water heated—there is a Cyphers-built machine in a size to suit your needs. Our facilities are unequaled. Cyphers Incubators are backed by 20 years' experience and every machine is *guaranteed* to give satisfaction—*guaranteed to you personally.*

Mammoth Incubators

Cyphers Semi-Mammoths for 1,200 to 1,600 eggs, and Cyphers Mammoths for 4,000 eggs and up, are built in sections on the same principle and with the same high-grade materials that made the Standard Cyphers famous. Send for Special Illustrated Circular if intending to increase to large capacity.

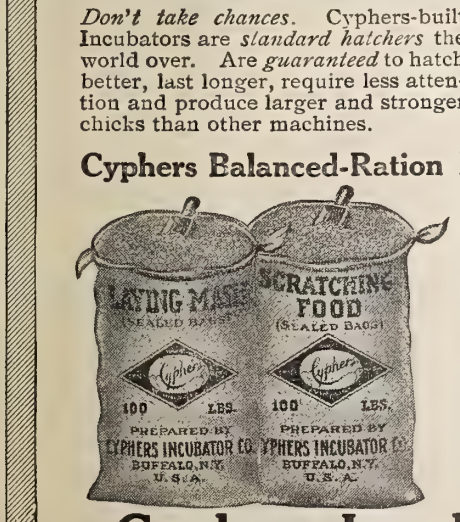
"Cyphers Company Service"

Our "Service Department" is maintained to advise and assist poultry raisers to solve their poultry problems. Write us, and remember this Personal-Letter-Service is entirely *free of charge to all.*

We have several valuable Booklets, also a set of 24 Bulletins on poultry raising—practical, up-to-date, illustrated—free to our customers.

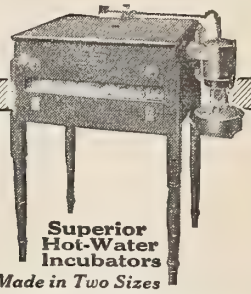
Our 1916 Year Book, 172 pages, 7½x10 inches in size—tells how you can get this literature—*A complete course in poultry raising.*

Write TODAY for this FREE Year Book



Cyphers Balanced-Ration Poultry Foods

KEEP up your egg yield in winter, and increase your profits by feeding Cyphers Laying Mash and Scratching Food. Thousands of poultry keepers depend entirely on Cyphers pure-grain, balanced-ration foods—*would not try to keep fowls without them.* Write for current prices and for our valuable book—"Poultry Foods and Feeding"—free on request.

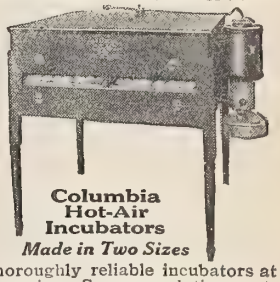


Superior Hot-Water Incubators

Made in Two Sizes

Has all the time-tried features of Cyphers standard of design and construction. Self-regulating, self-ventilating, non-moisture. If you want a hot-water machine the Superior will please you.

Prices: 65 Eggs, $12.00; 130 Eggs, $16.00



Columbia Hot-Air Incubators

Made in Two Sizes

Thoroughly reliable incubators at a low price. Same regulating system as our *highest-priced* machines. Beautiful and substantial wooden case—brass trimmings, triple walls, roomy nursery. The best hatcher on the market at the price.

Prices: 140 Eggs, $16.00; 250 Eggs, $22.00

Standard Cyphers Incubators

Made in Four Sizes

No other machine equals the supreme construction of the famous Standard Cyphers Incubators. The biggest poultry successes of the past 20 years have been made with these machines—*would not have been made without them.*

Prices: 70 Eggs, $15.00; 144 Eggs; $23.00; 244 Eggs, $34.00; 390 Eggs, $40.00

All prices herewith apply east of Rocky Mountains, north of Texas and south of the Canadian line. In these high freight territories prices are slightly higher.

FISHELDOTTE—A REAL WHITE WYANDOTTE "NUCLEUS"

(By H. E. Everroad)

HAVE you ever visited a farm? No, I don't mean an ordinary sixty or hundred and twenty-acre general purpose farm—nor a small, compact, pleasure-giving city lot poultry farm!—but a great big, honest-to-goodness farm devoted exclusively to the production of one breed of poultry? If not, then you have a treat coming to you!

It was one of those crisp Autumn mornings, when brilliant red and golden leaves came twirling down through the keen air. I stepped off the local at Hope, Indiana. J. C. Fishel is Postmaster of that thriving little burg, and his farm is located just on the outskirts—a pleasant little hike.

Scarcely had I opportunity to embark from the coach before a brawny hand grasped mine, and I confronted Charles I. Fishel. I should say we were about of an age—both of us run to dark hair, long noses and keen eyes! But any way, he has the healthy tan and the clear eye seen on a farm chap—even though Fisheldotte can scarcely be called a "farm" in the ordinary sense of the word.

When I stepped into the midst of about thirty-five hundred chickens—all as white as driven snow—all of them active and animated—I was reminded of the story of a colored brother, who asked his friend regarding the meaning of the word "nucleus." His friend answered that it was "Sompin' wot odder things gather 'bout." "Uh-huh," the first colored man ejaculated, "Den I was one las' week wen I upsot a beehive in the dahk." It certainly seemed as though Fisheldotte must be the hub of the whole blooming White Wyandotte wheel!—the "nucleus," so to speak, of this no mean breed of poultry.

I told Mr. Fishel that I felt that it was not right to speak of Fisheldotte as being a "farm"—just because its out in the country—so is a summer resort! City dwellers, with their steam heat, electric lights, gas for cooking, elevators and elevated street cars, and all—think of a "farm" as a breeding place for hay seeds! This idea is altogether passe—it is rapidly passing into the discard. The word "farm" means vastly more in the way of progress, efficiency and culture today than it did five years ago. But still, I don't think that Fisheldotte should be called a farm!

If you had a little manufacturing plant out in the edge of a pretty village, and built ten thousand thingamobobs that sold for all the way from a dollar each, up to several hundred dollars, you wouldn't exactly feel very kindly toward the person who considered your manufacturing plant a "farm"—Now, would you?

Considering the White Wyandottes that are hatched, raised and distributed from here throughout the United States and into foreign countries—it is more appropriate to speak of this farm as an extensive poultry and egg-producing "plant."

Out on the Fishel Place, instead of singing that old song:

> The old oaken bucket,
> The iron-bound bucket,
> The moss-covered bucket
> That hangs in the well,"

They sing it this way:

> "The modern steel bucket,
> The porcelain-lined bucket,
> The sterilized bucket,
> That hangs in the well."

Modern improvements will be found in the Fishel home. The poultry are provided day and night with an abundance of fresh running water. Correct feeding is run on an efficient basis, with a minimum of labor, scientifically, and the breeding of fine stock is made just as much a matter of study and care with the "Fisheldotte" people as is an important case to a good lawyer. These people are specialists on White Wyandottes—they tell me they have selected this breed because of general superiority—and by that I mean habits, good size and splendid, plump, meaty carcass, noted egg-producing ability.

Well, we are getting off the track a bit. You have seen breeding houses, laying houses, incubators, packing sheds—well, multiply the greatest number you have ever seen all together at one time, by about eight, and, unless you have had the pleasure of visiting some of the few other very large poultry farms, you

Everybodys Mid-West Representative

We are pleased to announce to our readers that we have arranged with Mr.

C. E. DARKUS

South Bend, Ind.,

to represent Everybodys Poultry Magazine at the shows and among the breeders of the Mid-West. He will attend both the Chicago Shows, Kansas City, Louisville, Cleveland, Milwaukee, Indianapolis, etc.

We cheerfully commend him to the breeders and assure all that their business will have our best attention.

H. P. SCHWAB,
Editor and Mgr.

—on a Post Card

Tell us how many laying hens you will winter and we will gladly tell you the cost of a sufficient quantity of Poultry Mustard to last through the winter months. The relation of

FRENCH'S POULTRY MUSTARD

to an increased egg production is told in a 32-page booklet we will send with the above information.

September 6, 1915.

The R. T. French Company,
Rochester, N. Y.

Gentlemen:

When I began the use of FRENCH'S POULTRY MUSTARD I had nothing in mind but its stimulating effect as a condiment, but I have wonderfully changed in regard to this after a prolonged use, as our flock of Fashion Plate Buff Orpingtons has taken on most wonderful vigor and our egg production increased to a very marked degree.

I add one pint of FRENCH'S POULTRY MUSTARD to my formula in building up a bushel of dry mash, and this quantity has proven to be the right proportion.

Our supply is running low and will within a short time send an additional order.

Sincerely yours,
(Signed) A. E. MARTZ

Other poultrymen are highly satisfied with their results. You will be too. A post card will bring the booklet and information.

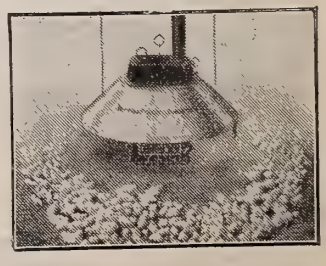
THE R. T. FRENCH COMPANY,
Dept. E, Rochester, N. Y.

MAGIC BROODER, Price $15——HILL COLONY BROODER, Price $30

To our fellow poultry raiser. We wish to state that we are in the chicken business ourselves and know the ups and downs of the poultry business. We constructed our brooders to brood the chicks equal to the mother hen. They are absolutely reliable, built with draught dampers top and bottom, regulate themselves perfectly and never leak gas.

Write us and we will tell you how many chicks you can successfully raise under a colony brooder, which you must know to succeed. If you undertake to raise 1000 or 1500 chicks with our brooder you will meet with disappointment and failure.

If you want to know anything about us write to any person in this city and ask about C. V. Hill. They all know of him and his success. Agents wanted who can furnish good references.



Address; UNITED BROODER CO. 38-40 Bellevue Avenue Trenton, N. J.

will have some conception as to what I saw! For everywhere were White Wyandottes, their beautiful bodies dotting the grass like daisies in a meadow.

I asked Mr. Fishel, (that is, Chas. I. Fishel,—for he was the gentleman who showed me over the "farm") how they came to name their place "Fisheldotte." "You will notice we have appropriated the 'dotte' from the end of Wyandotte and inserted it in after our name. Well, this was our reason," said Mr. Fishel.

By careful breeding we have greatly perfected White Wyandottes, until the best Wyandottes are commonly known as 'Fisheldotte White Wyandottes.' First we wanted to identify the name 'Fishel' with these superior birds, then we wanted to identify the superior birds with the name 'Fishel'—sort of use the one name to stand for 'Fishel' and also 'White Wyandotte.' As the fame of this Fishel bird grows we hope that it will be known as 'Fisheldotte,' instead of 'White Wyandotte.'—but that is still a dream toward which we are working."

We stood by the door of one of the great laying houses discussing the popularity of White Wyandottes. The Fishels have document after document, (which I later inspected, in the office)—proving the remarkable egg-laying qualities of the "Fisheldotte" Strain. And I could see for myself that there was much fine meat on this bird! How my mouth watered as I thought of the many savory dishes that could be produced from the carcass of a White Wyandotte! Incidentally, I am informed that this meat has an especially fine flavor.

There is no better farm bird than the White Wyandottes. It is quiet and tame, lays an abundance of large brown eggs, fattens up readily—it is not a "glutton"—and it pays for what it gets. As a side line for the man in the city, there is no better bird. White Wyandottes are readily confined within low fences. You won't always be chasing White Wyandottes around the neighbor's garden! If you have been eating "store-bought" eggs—you can imagine how a fresh laid White Wyandotte egg, carefully fried, would taste, on a piece of crisp bacon or succulent ham!

The man who expects to go into the poultry business on a more extensive scale will find, after careful investigation, that White Wyandottes have many points of superiority which recommend them to the student of poultry market conditions.

I asked Mr. Fishel if he would briefly outline for our readers what he considered was responsible for their great success in the poultry business. Now, when any of the Fishels get "wound up" on the subject of White Wyandottes, they are able to "go some"—he talked with the rapidity of a Gatling Gun—but with the sincerity of a Beecher. You know how it is yourself—when a man is all bound up in his business, and has a good opportunity to state the reasons back of his ideas and ideals—he is quite likely to speak—especially if the listener appears to be "absorbant."

"First," said Mr. Fishel, "our business is based on integrity and service. A few days ago I was reading something by Elwood B. Rise, of New York City, he said:

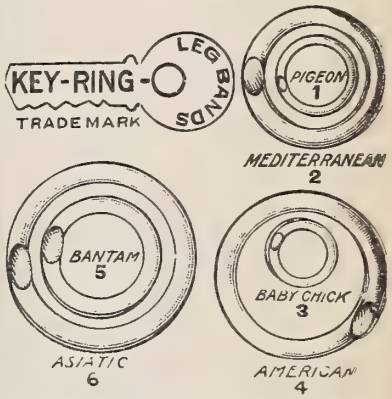
'Gold is powerful, but Integrity is more powerful. Gold, by expenditure becomes less. Integrity, by use, become even greater. It is not fearful of the light. In business, it reflects honor and accumulated prestige upon those who practice it.'

"To begin with, Father had very little "gold"—but a great deal of integrity. He had the old-fashioned idea that "slow but sure" was a good plan. You might say that he specialized on each customer, and kept exercising this integrity until by use it became even greater—and I think he pased on some of it to me, for it is by personal preference that I endeavor to give each one of our customers even more than we are paid for giving. By using our integrity, we have naturally been able to gain more "gold." This is just one of the laws of nature.

"I have noticed with a great deal of interest that these concerns which start out with the idea that poultry purchasers are 'easy marks'—endeavoring to get the biggest price and to give the least value possible,—soon

"Key-Ring-O" Leg Bands

are made in Black, White, Dark Blue, Pink, Light Blue, Red, Green, Yellow, Purple and Garnet, and in the following sizes:—



No. 2, 4, 5 and 6—12-15c, 25-30c, 50-50c, 100-75c, No. 1 and 3—12-10c, 25-20c, 50-35c, 100-50c.

Send seven 2c stamps for 15 Key-Ring-O Leg Bands and full information as to prices in quantities.

Now in the time to get the facts regarding best methods of marking for the easiest, cheapest and best way to indentify without handling.

State Color and Sizes Wanted.

WHITE PLYMOUTH ROCKS

are today the best fowl we have. The best winter layer, the best table fowl and the greatest money maker. When buying remember the fact that

U R. FISHEL'S ARE THE BEST

as has been demonstrated by prizeswon at all the leading State Fairs, Poultry Shows and Expositions. I have the best lot of fowls this season I have ever reared. EXHIBITION BIRDS, SELECTED BREEDERS and UTILITY FOWLS at prices you can afford to buy. Send for our SPECIAL PRICE LIST it will interest you I know.

EGGS FOR HATCHING———BABY CHICKS
U. R. FISHEL,
BOX 4, HOPE, INDIANA.

sink into oblivion—whereas just a few of the old established concerns have grown larger and larger, in the face of the fiercest competition—because of their integrity and because of the conscientious service they render.

"The second reason back of our success is experience. Before specializing on White Wyandottes, father had tried several other breeds, and knew the poultry business thoroughly. He felt that White Wyandottes had a future. He pinned his faith to this flag, and since that time we have grown.

"They say that before a man is successful he must go through this evolution—

"Ten years of wondering—
Ten years of blundering—
Ten years of thundering."

"Father first 'wondered' as to what bird to specialize on—then after he selected White Wyandottes, he 'blundered' along—getting his experience, all the while learning and adding to this store of experience—which we are always glad to pass on to our customers—and now we are 'thundering' along successfully.

"Sometimes I think that this old foolishness of learning everything by personal experience is destined to live forever—if only more of the Everybody's Poultry Magazine readers would realize that we have put this very best of our experience into our catalogue and that this catalogue is a virtual text-book of experience, why they would value it greatly. If we asked a dollar for this, as a text-book, poultry people would consider it a good purchase—but we offer it free to any man or woman interested in poultry, who will simply drop a postal to 'J. C. Fishel & Son, Box 50, Hope, Ind.'

Advertisingly speaking, this ought to be the end of the article! But read on—then go back to this point and send the post card for the book promptly.

"The third point back of our success," continued Mr. Fishel, "is elbow grease—nothing more or less than all-fired hard work. But that's all right—we like it! I'll gamble that there are just as many fellows in the city who work as hard as we do—and they like it.

"Wasn't it Edison who said—'Success is one part inspiration and nine parts perspiration?' I remember Martin Luther in one of his books somewhere says, 'Labor restores the strength we give it a hundredfold, and unlike your financial operations, the revenue is what brings in the capital. Put your soul into your work and joy and health will be yours.'

"We put soul into our work because we have absolute faith in the 'Fishel Strain' of White Wyandottes. More and more are we prevailing upon people to see things our way—because they are getting just as good results as we are from White Wyandottes, after starting right.

"The last reason back of our success is integrity and service. Yes, we have already given that a reason, but I consider it sufficiently important to use as the 'key stone' as well as the 'corner stone' of our success, because we wouldn't last very long if we didn't give our customers a square deal and good service."

This evidently has been an unusually good year in the Fisheldotte Camp! For that matter, they seem to make amazing progress each year. But this year their winnings have been unusually large. I saw some of these wonderful exhibition birds, beautiful in the extreme, fit to adorn a king's estate—some of these birds valued up into four figures. Then, too, I saw many, many birds that have remarkable records as egg-producers. In the office I saw paper after paper attesting to the authenticity of these records—I inspected the "Farm"—I saw the birds and their records—and I was conquered!

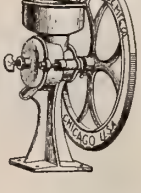
It would take a great deal of time to set down a list of these winnings in this space—that is unnecessary, for a postal card to J. C. Fishel & Son will immediately bring a recently issued pamphlet on that subject.

When you write the Fishel people, bear in mind that you are not writing to a bunch of "farmers"—you are getting in touch with people who are specialists in their line—who not only know White Wyandottes, but who know poultry. They can give you much advice from their wide experience—whether you are a customer or not.

Mr. Fishel has a dictaphone in his office, and he'll promptly answer all letters you write, giving you the benefit of their combined experience on any poultry information you may desire. This is only a part of the "Fisheldotte" service. and the measure of service marks the large poultry "plant" just as surely as it designates the successful manufacturing plant.

NEW GOODS READER

Otis & Moe Manufacturing Company, 1125 Washington Boulevard, Chicago are now manufacturing and offering for sale Model Hand Mills in three sizes and one Power Mill for grinding all kinds of small grain, including



shell grain, wheat, oats, rye, peas, beans, dry hominy, salt, dry bread, crackers, oyster shells and dry bone. They can also be used for coffee or sugar if desired. There is no other mill on the market that covers such a wide range of usefulness.

They are readily adjusted by hand to grind fine, medium or coarse. All sizes have cone burrs of steel alloy, combining great hardness and great strength. They are just the thing for the small poultry raiser, because they are adapted to cracking for the older birds and fine grinding for the small chickens. These mills are guaranteed not to choke and will not clog in teeth while grinding fine, providing the material is dry. They have a bigger capacity with less effort than any other mill on the market. The mills are beautifully finished in enamel and are readily taken apart for cleaning.

The Model Power Mill for small grain requires from one and one-half to two horse power, and is adapted for the larger poultry farms or for use in the feed store. These mills fill a long-felt want for they are sold at moderate prices within the reach of all, and adds one more good thing to Moe's well known line of useful and sanitary poultry supplies.

More Eggs Per Hen

Summer green food makes hens lay more eggs. You get more eggs per hen all winter by dissolving SUCCULENTA TABLETS in their drinking water. Better and cheaper than green food. No bother. 100 large tablets by mail 50c. 250 tablets $1.00 postpaid. Money back if not satisfied.

POORMANS 200 EGG STRAINS

LADY ALFARATA

Record 301 eggs

Is Your Only Guarantee For Success In the Poultry Business

Isn't it a serious matter when eggs are selling at 40c to 60c a dozen and your hens are not laying? Ask the man who has failed. Also ask him if he would recommend the breeder he bought his stock from.

You cannot be too careful in the selection of your foundation stock; the stock from which you will produce your future layers. I BREED FOR EGGS and can supply you with stock that will lay when the egg prices are high.

EGGS. My breeding pens are now mated and I can usually make shipment of eggs promptly upon receipt of your order. I would however, advise that you order be booked in advance. This will assure delivery when you desire them. Prices, 10c, 20c and 30c each.

BABY CHICKS. I will commence hatching operations January 1st. I am now booking orders for baby chicks for delivery any time thereafter, weather conditions permitting. Early orders simplify matters and assure mutual satisfaction. Instruct me to book your order now. Prices 20c, 35c and 50c each.

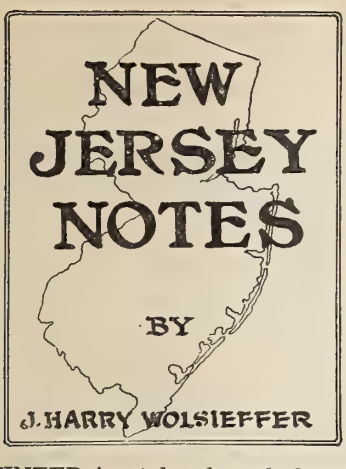
SPECIAL STOCK SALE FOR DECEMBER. For this month I am quoting a 20 per cent. discount on individual birds and as high as a 10 per cent. discount on ten or more. In all my eight varieties, namely, WHITE and BUFF ORPINGTONS, WHITE and BARRED ROCKS, ROSE and SINGLE COMB REDS, WHITE WYANDOTTES, and S. C. WHITE LEGHORNS, I can supply Breeding Stock, young or old, that will produce a future flock of the kind that has in the past given entire satisfaction to over 3,000 customers. I herewith present your opportunity to start right. My free instructive catalog has helped others and will undoubtedly help you.

WRITE FOR YOUR COPY TODAY

JOHN G. POORMAN,

Box 300,

Tinley Park, Ill., U. S. A.



WINTER is at hand, and the wise poultry keeper is fully prepared to meet the sudden changes in the weather. It is here, the good management of the flock that puts the balance on the right side of the ledger.

* * *

Glassboro holds its first poultry show this month, December 9th, 10th and 11th. The members have worked hard, and a good exhibit is assured. Newton Cosh, of Vineland, will place the awards which means satisfied exhibitors.

* * *

Chicken pox was plentiful this year. The wide awake poultry raiser who was on the job, quickly stamped it out of the flock, and the pullets are getting down to work shelling out hen fruit; those who were careless had considerable trouble, and the disease seldom fatal, but always troublesome, still lingers, which means a reduced egg yield.

* * *

The little single comb White Leghorn is still the leader in this state, due to its many good qualities and the white egg craze in New York City and surounding zone. Within the past few years, however, those men and women who have taken up some of the heavier breeds have come to the front, and are making good, not only in a commercial way, but in the show room as well.

* * *

Mount Holly with 1500 fowls on exhibition, broke the New Jersey fair records for 1915. Besides this, no fair had a better pigeon exhibit than was seen there, both in numbers and quality. This will be good news to the hundreds of pigeon breeders in the state and it is to be hoped that the leading fairs will give the pigeon fanciers support in the future.

* * *

Every poultry breeder should send a few fowls to the official state show which will be held at Dover this coming January 10 to 15, 1916. Personal feeling, if any, should be laid aside and every poultry raiser should work to make the state show, a success each season. No matter where held, or by what association, with large classes of quality fowls. The winners can properly be called New Jersey's best.

GOLDEN PENCILED HAMBURG breeders and prospective breeders of this beautiful variety, we want to organize a club, create an interest, and exhibit what you have at the Fall and Winter Shows. An energetic, hustling man or woman wanted to assume the secretaryship. Get busy and send your name to

JOHN A. GAMEWELL,
Little Silver, N. J.

* * *

The poultry Judge these days is between the devil and deep sea. If he breeds chickens, he should not judge, because in some shows a prize might be placed on a bird from his eggs, or perhaps the winner was hatched and reared from breeding stock sold some time before; then, because of his poultry knowledge, a progressive poultry Journal wishes him to write during his spare time, and thus perhaps obtain business for them. He is doubly in it then, for he has a farm, is connected in some manner with the poultry press, therefore, according to some, he should not judge. The only Judge who can come under the wire according to some who would rule, is the one who is not in the chicken business, but obtains all the knowledge from the Standard of Perfection, and what the exhibitors might tell him.

* * *

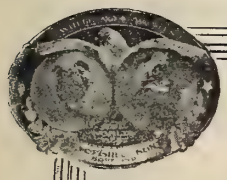
The high price of poultry feeds this year did one good thing for the average poultry keeper; it made a closer culling—with the result of a flock of better producers, and a better balance on the right side of the ledger. The aim of the so-called utility-breeder had heretofore been to if any undesirable pullets were retained, with the result that a decrease in profits was made from the flock. Quality and not quantity should be the aim of every poultry keeper if the best results are to be obtained.

* * *

The Grand Central Palace and Madison Square Garden shows are popular among the New Jersey breeders. The exhibitors personally know many of the officers of both shows, and have every confidence in the management and judges selected to place the awards. There is always a large entry of New Jersey breeders at both shows and indications point to even a greater number this year.

* * *

Every indication points to a good year for the poultry keeper. While feed prices are still higher than in former years, the price of eggs command a good figure—one from which a profit can be made. The reaction from the high prices of good breeding stock, eggs, and chicks, to the other extreme—low prices will gradually



WHITE WYANDOTTES

:: ARE ::

THE MOST POPULAR FOWL TODAY

The reason is that as a utility fowl they are unequalled, and as for fancy and beauty they please the most exacting. But there are various strains of white Wyandottes and as there is only one best you naturally want it.

Fishel's World's Best Strain

have in the past demonstrated, not only by our show record, but by the testimony of our customers, that they are entitled to the trade name on their merits. Send for our catalogue and winning list, giving you a report on the shows we have shown at this fall. This record convinces the world that our strain

HAS NO EQUAL

Remember they are bred for meat and egg production as well as fancy. Exhibition, breeding and utility birds for sale by the hundreds. Secure your foundation or new blood from the strain that meets all competition at the various large shows and wins the majority of prizes. To do this you must go to headquarters. Send for catalogue and November Bargains.

J. C. FISHEL & SON, BOX 50, HOPE, INDIANA.

adjust itself when the beginner begins to learn that there is a happy medium between the two; and that good stock, eggs, and day old chicks can be purchased at a reasonable figure, but that they can not be purchased except at a few cents above the market price. Good stock will always be in demand, and while the beginners may start out at the bargain counter, they will, if they stick to poultry, sooner or later purchase from the progressive breeder who has the real thing in the poultry line.

* * *

The Trenton fair management should give the poultry raiser a building worthy of the industry in that state, since Syracuse, Allentown, Hagerstown, Hanover, Frederick and other fairs have up-to-date buildings. New Jersey has long trailed in the rear in this respect, with its ideal location between the great poultry states of Pennsylvania and New York, and its good railroad service, Trenton could, and should, be made a leader. Poultry is an attraction which is far greater than some fair managements seem to have any idea of. A visit to the wonderful display of fine standard bred fowls at Syracuse, Allentown, Hagerstown, etc., might convince them.

PIGEONS AT HAGERSTOWN

October 12th-15th, 1915.—E. B. Ulrich

There was a grand total of 1256 entries, an increase of about 400 over last year. The outstanding varieties were Pigmy Pouters, Fantails, Runts, Tumblers, Owls, Orientals, Turbits, Magpies, Swallows, Arcangels and Dragoons.

The total number of exhibitors was 61.

I have prepared a critique of the classes I passed upon, which is as follows:—

Pigmy Pouters — Black Cocks. The winner nicely finished out, very active, stylish, little fellow. 2nd failed to winner in condition and closeness of limbs.

Hens—The winner a beauty and very pleasing.

Bred 1915 (7). The winner a beautiful young cock, all the earmarks of a big one; winner or special for best Pigmy cock.

In connection with the red Pigmies, the color generally throughout needs considerable improvment, the crossing with the other colors being quite evident.

Yellow Cocks (4) — The winners standing out and were very good for yellows.

Hens (5)—1 and 3, Ewald, 2 Case. The winner being quite a nice little Pigmy, god color and slender. Not one would show herself in this clase.

Bred 1915 (3),—1, Knox, 2, Ewald, 3, Case. Not much between them, condition determining the awards.

Silver Cocks, (3), 1 and 3, Ewald, 2, McKay. The winner standing out, a very nice little pouter, good condition, nice blower.

Hens (6), two good ones, the former winning Special for best Pigmy Hen, a very pleasing, attractive pigeon, nich length of limb, narrow girth and quite a long waist for a Pigmy.

White Cocks (5), 1st easy winner, splendid condition, nice blower.

Fantails—All the classes were very nicely filled, the whites and blacks excelling averaging six to the class. The Specials for best cock and best hen went to the winning adult whites of J. F. McKay. The winning young white of Ewald, the black cock of J. H. Mehring, and the winning black hen of J. F. McKay also were of especial merit.

The fantails as a whole were in moult which meant considerable time being spent in picking them out.

Trumpeters—But two classes were provided with eleven entries, all the winners being whites.

L. F. C. L. Tumblers—The red and black self classes filling nicely, averaging about seven to the class.

Jacobins—There were a total of 36, with same remarks with reference to the Fantails can be applied to the Jacobins. The Special for best Jacobin going to the magnificent White Cock belonging to Herbert Bull.

English Owls — Harold Rawnsley won the Special for best English Owl with a magnificent Silver Cock, the principal winners being Messrs. Ewald and Rawnsley, about town.

African Owls—A very nice display, the classes for Whites and A. O. C. being especially keen. Rawnsley winning the Special for best African Owl with a tri-color in the A. O. C. class.

Chinese Owls were the usual run as were the Tail Owls. The winning Tail Owl Cock of Harry G. Maynard being quite a nice one.

Blondinettes — The Black Laces and Dun Laces were very nice ones. those of Dr. Chas. H. A. Meyer standing out. The Special for best Blondinette male going to the Doctor's beautiful Dun Laced Cock while the Special for best Hen was captured by George B. Hart.

Turbits — Turbits totalled 49. Messrs. Orr & Cleaver showing a very good string as usual, capturing most of the prizes and both Specials. Herman Strauff showed some very nice Reds and Ewald's A. O. C. Hen was worthy of especial mention.

Magpies—Magpies were a battle royal between Messrs. Rawnsley, Ehinger,, J. A. Trickel and Patersen. The Black, Red and Yellow classes were especially hot, the Special going to the Black Hen of Rawnsley. The young Black of Trickel's is also a good one and gave her a very close run. The 1st, 2nd and 3rd prize winners in these colors surely have the daylight underneath them and were all of the modern type, condition and behavior in the walking pen entered a great deal in the making up of the decisions in these classes.

Nuns—Nuns mustered a total of 22, an average of 7 to each of the 3 classes.

THE FOURTH EGG-LAYING CONTEST AT MOUNTAIN GROVE CLOSES

Per Cent of Hens Lay Over 200 Eggs in One Year

On October 31, 1915, the Fourth Egg Laying Contest at Mountain Grove, Mo., closed, and on November 1, the Fifth Contest began.

The Fourth Contest was in two parts, the Missouri and the National, the Missouri Contest being made up of pens from Missouri while the National was composed of pens from Missouri, other states and foreign countries.

The Fifth Contest is called the National Contest and is composed of 106 pens from 23 different states and 2 foreign countries. Each pen contains five hens and one substitute, which is used in case one hen should die or become incapacitated.

The varieties in the fifth contest are:

S. C. White Leghorns, R. C. White Leghorns, Buff Leghorns, Black Leghorns, Brown Leghorns, Anconas, Rhinelanders, R. C. Black Minorcas, White Wyandottes, Silver Wyandottes, Columbian Wyandottes, S. C. Reds, R. C. Reds, S. C.. R I. Whites, R. C. R. I. Whites, Barred Rocks, White Rocks, Missouri White Fluffs, Buff Orpingtons, Black Orpingtons, White Orpingtons, Black Langshans.

Of the 48 months in the four contests, the S. C. White Leghorns have won 16 cups; Barred Plymouth Rocks, 6; Buff Orpingtons, 4; R. C. Reds, Buff and White Wyandottes, 3 each; S. C. Reds, Anconas, Silver Wyandottes, and S. S. Hamburgs, 2 each; and White Orpingtons, Black Orpingtons, Black Langshans, S. C. Brown Leghorns, and R. C. White Leghorns, 1 each.

During the four contests, 386,030 eggs were laid, of which 6 per cent. were laid in January, 8 per cent. in February, 12 per cent. in March, 14 per cent. in April, 12 per cent. in May, 10 per cent. in June, 10 per cent in July, 8 per cent in August, 7 per cent. in September, 5 per cent. in October, 3 per cent. in November, 5 per cent. in December.

The ten highest pens for the year are as follows:—

Pen	Eggs
40 Barred Plymouth Rocks	1050
34 Barred Plymouth Rocks	1049
6 S. C. White Leghorns	971
10 S. C. White Leghorns	957
38 White Plymouth Rocks	944
18 S. C. White Leghorns	931
2 S. C. White Leghorns	897
26 Buff Wyandottes	891
14 S. C. White Leghorns	887
23 Buff Wyandottes	887

Estimating that eggs average 20c per dozen and that it costs $1 to feed each hen a year, the hen which lays 60 eggs in a year, just pays for her food, and estimating that it costs one half as much for housing and labor, the hen which lays 90 eggs per year just pays her keeping. The hen which lays 100 eggs in one year makes a profit of ten eggs, while the hen which lays the sum of 120 eggs in one year makes a profit of 30 eggs, and is therefore three times as profitable as the hen which lays 100 eggs. The hens which lay 200 eggs per year are 110 eggs profit, which would be $1.83 1-3 profit. Considering this as interest at 8 per cent. on an investment, the hen would be worth $22.91. This estimate is considered from a commercial viewpoint and not from a fancier's or breeder's viewpoint. The only breeder's consideration given is that the hen would reproduce herself so that the investment would be continuous.

Two hundred and forty-nine hens in the four contests laid 200 eggs or over in one year. This is approximately 10 per cent of the hens in the contests, while 358 or 14 per cent. of the hens in the contests laid less than 90 eggs in one year. All hens in the four contests averaged 152 eggs each.

FOURTH ANNUAL INTERNATIONAL EGG-LAYING CONTEST

Held at Storrs, Conn.—Report for the Fifty-second Week ending October 31, 1915.

The fourth laying contest at Storrs has ended. White Wyandottes and Rhode Island Reds were the winners with White Leghorns in third place.

JUST WHAT I HAVE BEEN LOOKING FOR
Collapsible Sanitary Hen's Nest

add to or take from as many as you wish at any time, no nails, screws or bolts, except where brackets are fastened to walls of coops.
Sanitary easily cleaned louse proof made of best material substantial and convenient, diameter of nest 14 inches.
Manufactured by,
McDaniel & Cessna
KANSAS, O.
Ask for your county representative.

The one thousand birds representing nineteen breeds and hailing from fourteen different states and two countries laid a grand total of 151,-806 eggs or an average of 152 eggs per hen as compared with the average of 144 for last year.

The subjoined table indicates the average individual production by breeds as well as the average for all varieties taken together.

Plymouth Rocks	146.3
Wyandottes	165.0
Rhode Island Reds	155.8
White Leghorns	158.1
Miscellaneous	125.8
Average for all breeds	151.8

As evidence of the almost unbelievable difference in hens it may be pointed out that the individual production ranged from no eggs at all, the record of one White Leghorn, up to 257, the score of a Rhode Island Red. This record does not quite equal the best individual performance last year. It is, however,the best work of any Rhode Island Red since the contest started four years ago. The poorest pen in the contest laid 569 eggs, an average of only 57 for each of the ten birds in the pen whereas it will be noted from the score of the best pen above that the average production per hen was 207 eggs for the year.

The final scores of the five best pens in each of the principal breeds are as follows:

Pen		
	Plymouth Rocks

98	B. P Nase, Thomaston, Conn. White Orpingtons	1371

*Not in competition

Mr. J. Elmer Long, Prop., of the Slaty Ridge Poultry Farm, Palmyra, Pa., writes us that he is equipped to produce 50,000 day old chicks the coming season. Mr. Long breeds Bred-to-Lay S. C. White Leghorns. His eleven years experience in mating and breeding for heavy egg production has brought his strain into prominence creating a demand last season which taxed the capacity of his plant, making it necessary to enlarge along all lines for the 1916 season. The Slaty Ridge Farm also specializes on eight week old pullets, as well as hatching eggs. Get in touch with them early and book your order. A personal inspection of their plant and equipment is invited. Write for free catalogue.—J. T. H.

ALDRICH POULTRY FARM—COLUMBUS, OHIO

Perhaps no other specialty breeders of any variety of pure bred poultry have done more for the variety which they are furthering than have the Aldrich Poultry Farm, 7032 North High Street, Columbus, Ohio. Their consistent winnings at America's greatest exhibitions are an evidence of their ability to produce and reproduce year after year, with improvements noted with each achievement accomplished. To list the winnings of this famous line of White Orpingtons would fill a book, we cannot refrain, however, from calling our readers' attention to the latest winnings at the Allentown, Pa. Fair, where for years the noted breeders of the East and West have competed for honors.

At this show they made the wonderful record of winning every 1st as well as 2nd and 3rd Cockerel and 3rd Pullet; in other words, every one of the twelve birds entered, won either first or second, with the exception of one pullet which won 3rd—truly a wonderful achievement, where quality predominated. Aldrich Farm also had the satisfaction of seeing birds sold by them come under the ribbons at the same show.

Every fancier of White Orpingtons should have a copy of their Fall announcement; it is full of valuable information, containing reproductions of the wonderful males winning both firsts at the last Madison Square Garden Show; as well as reproductions of envelopes bearing the postmarks of customers from almost every country on the Globe, showing to what a wonderful degree the Aldrich White Orpingtons have become popularized. This popularity has been obtained by their being able to satisfy their customers, through the fact that they produce birds of exceptional quality both as exhibition specimens and as prolific layers, as is witnessed by the pen furnished by them to a customer which won in competition with 79 other pens the prize Cup for laying the greatest number of eggs in one month (February) at the National Egg Laying Contest at Mountain Grove, Mo.

At the present time they have a grand lot of youngsters, as well as cocks and hens ready to win for you. Write them for this Fall Announcement which in itself is interesting reading, and convincing in its truths regarding the ever-popular White Orpingtons. Always mention Everybodys.—J. T. H.

THORNYCROFT BUFF LEGHORNS
won at Madison Square, Pittsburgh, Buffalo, New York State Fair and Hagerstown within a year. They win in any competition. Write your wants.

SHOWS and ASSOCIATIONS

A SOUVENIR WORTH HAVING. THE FIRST POULTRY PREMIUM LIST EVER PUBLISHED

The first poultry exhibition ever held in America was staged on the upper floor of the old Fitchburg Railroad Station in Boston, Mass, in 1850. There are a few old timers who may recall this exhibition, and we believe that Mr. I. K. Felch of Natick, Mass., was one of the judges. No doubt there are many fanciers of the present date who would like to see a copy of this list, and we have arranged to have a number printed for distribution. We will offer this as a souvenior with a premium list of the Milwaukee Auditorium Show. All inquiries for the Milwaukee list will be mailed a copy, printed on good book paper. It will necessarily have to be folded on account of the size of the list. This copy is free. Should you desire a copy printed on heavier paper and mailed in a carton, so that it will be suitable for framing or hanging in your library, please send ten cents in coin, and same will be mailed to you.

The Milwaukee Auditorium Show promises to be one of the very best held during the winter of 1915. It is the first National Show that has ever been held in the Cream City, and many of the most prominent breeders from all parts of the United States, will exhibit there. There has been no exhibition in Milwaukee for three years. The population is sixty-five per cent German, and nearly all of them fanciers. It will undoubtedly be one of the greatest sales shows for the season

For full information address Theo. Hewes, secretary, 25 W. Washington Street, Indianapolis, Ind.

* * *

JUDGES FOR MILWAUKEE AUDITORIUM SHOW JANUARY 21 to 28, 1916.

For Premium list address Theo. Hewes, Indianapolis, Ind.

THE FANCIER'S FOWL

If you are not already a breeder of Golden Penciled Hamburgs, possibly you are an admirer and a prospective breeder. In either case I wish you would be kind enough to co-operate with me in the organization of the Golden Penciled Hamburg Club, which will take place at Madison Square Garden, January 3, 1916, at 7.30 p. m.

It will cost you only one dollar initiation fee, which will include your first year's dues, and you must be a member of this club to compete for the fine list of specials which are being offered.

Send in your name and remittance promptly to me and oblige, John A. Gamewell, Little Silver, N. J.

* * *

The Penna. State Breeders Club of the World will be held at the Altoona show, Jan. 10 to 15, 1916. The club will offer two beautiful silver vases, one on each comb, and in addition to this the show association will give twenty-five cents per bird extra (that is if we have 100 birds we will get $25.00 extra cash; $200—$50, and so on up, and in addition to this cash the show association will offer a large piece of cut glass on the best display of single combs and on the best display of rose combs. The above specials to be competed for by members of the club only. Membership fee, $1.00, which also includes the Rhode Island Red Journal for one year. Address Aaron Fell,, Secy-Treas., Perrysville, Pa.

* * *

The State meeting of the Barred Plymouth Rock Club will be held in connection with the Philadelphia show, Dec. 14 to 18. Write Henry D. Riley, president of the Philadelphia show, and national secretary of the club, for premium list or other information and help make this the largest and greatest state meet yet held.

* * *

The sixth annual show of the Bates County Poultry Association will be held at the Armory, Butler, Mo., Jan. 5, 6, 7, 8, 1916. The officers are working to make this one of the best shows in Western Missouri. Liberal cash premiums will be placed by scorecard judging by C. H. Seylar, of Des Moines, Iowa. Put Butler on your show list this year and send to Edson Snyder, Secretary-Treasurer for premium list and catalogue.

* * *

The Dover , N. J. show, to be held Jan. 10-15, is the official state show of the New Jersey State Poultry Association. This should make it one of the largest, if not the largest in number of entries and exhibitors in attendance of any New Jersey show. This state is one of the hot beds of poultrydom and the fowls she breeds always speak the quality of her breeders. Write the secretary for premium list, which is now ready for mailing and resolve to show a few good ones there.

* * *

To the Poultry Fanciers of U. S. and Canada:

The Tri-State Poultry and Pet Stock Club of Toledo, Ohio, hereby gives notice that it will not give a show this season. The Toledo Land Products and Live Stock Exhibition will be held in Toledo, December 1-12, 1915, and poultry will be exhibited in connection therewith We believe that Toledo is not large enough for two poultry shows this season, so we yield to the other organization and extend to the management our best wishes for a successful exhibition. This dos not mean that we have abandoned the field. On the contrary we are planning for a larger and better show to be held some time during the season of 1916-17 and announcement of dates will be made early in the new year. We desire to thank our friends for their generous support in the past and hope to merit their future patronage. We are also open to suggestions as to how to make our shows bigger and better.

* * *

The Genesee Valley Poultry Association, Rochester, N. Y., announces its dates as Jan. 3 to 8; also that Messrs. Geo. W. Tracy, A. O. Schillings, Adam F. Noll, Chas. W. Augeunstein, W. J. Wirth and Boyd Johnson will place the awards on poultry, while Messrs. Edw. Morrison and M. F. Cook will judge the pigeons, with J. Tilly Judging all pet stock. Superintendent of poultry department, Hugo Freese; superintendent of pigeon department, John B. Pfeiffer. This is a strong list and should bring out a record entry. Write Secretary J. H. Westcott, P. O. Box 472, Rochester, N. Y., for premium list and other information.

* * *

FIRST ANNUAL DRESSED MARKET POULTRY SHOW—MASSACHUSETTS AGRICULTURAL COLLEGE

(Roswell W. Henninger, Secretary.)

The Poultry Department of the Massachusetts Agricultural College having for some time felt the need of a larger and better supply of dressed poultry on its state markets and throughout New England, has decided to hold her first dressed market poultry show, January 21 and 22, 1916.

It has been thought best not to charge an entry fee or award any cash prizes. All awards will be placd according to merit, the winner receiving a ribbon and any special premium he may be entitled to. All exhibitors will be divided into four divisions:

HUBBARD'S POULTRY SECRETS

Written by Charles Hubbard, Manager of Foxhurst Farm, a man whose reputation is known to every exhibitor at Madison Square Garden. Disclosing to the public every secret Mr Hubbard has used in placing Foxhurst Farm Black Orpingtons, the undisputed Champions of the world, as shown by the twelve consecutive years record at Madison Square Garden.

This book has a handsome de-luxe cloth binding, and contains 130 pages, 20 cuts, and gives all of Mr. Hubbard's up-to-date secrets, from the shell to the show room, which has never stood defeat. Mr. Hubbard's secrets apply to all standard bred poultry. His chart of line breeding alone, is worth many times the price asked for the book, which is $2.50.

Address,

Hubbard's Poultry Secrets

Lime Rock, Conn.

R. C. WHITE AND BUFF ORPINGTONS, S. C. BLUE ORPINGTONS, R. C. RHODE ISLAND REDS

Write for complete booklet describing the many other sanitary accessories for poultrymen, manufactured by

OTIS & MOE MANUFACTURING CO.,

1125 Washington Boulevard, Chicago, U. S. A.

First, Boys' and Girls' Club; second, students; third, farmers and commercial men; fourth, butchers and produce dealers. The first class is for the training and guidance of the future poultry raisers that are but now in the embryonic stages of development. The second class is to acquaint the students with actual conditions of the market and have them direct their energies after leaving college toward the upbuilding of the market side of the great and growing poultry industry. With the farmers and commercial men the show will have for its object the production of better market poultry. In the fourth class, the exhibition will tend to influence dealers so that their demand will be for better birds; consequently they in turn may hand to the public an improved grade. To the best of our knowledge no college has ever given a show for the standardization of dressed market poultry. That the egg laying contests and egg shows have proved a success and of value cannot be doubted. We sincerely hope that a show such as we will have in January will be a stepping stone to better market poultry and be to this phase of the industry what the Storrs, Missouri and Australian egg laying contests together with Madison Square, Boston and Chicago shows have been to the egg producer and fancier.

For more detailed information, address the secretary of the Dressed Market Poultry Show, Massachusetts Agricultural College, Amherst, Mass.

* * *

OIL CITY, PA., SHOW

The state meet of the Ancona Club of America, also the state meet of the Houdan club will be held in connection with the Oil City, Pa., Show, Jan. 12 to 15. Liberal cash specials as well as the club cups are offered. Write Chas. R. Baker, secretary, and make your entry early.

* * *

CLEVELAND, OHIO, JAN. 2 TO 8, 1915

With promises of being the biggest Poultry Show ever held in Cleveland, the Cleveland Poultry Breeders Association announce their fourth annual exhibit to be held the week of January 3, 1916. Arrangements have been made for the state meets of the Black Orpington, White Wyandottes, Rose Comb White Orpington and the Houdan clubs,, the National meet of the Rhode Island Red club of America, national meet of the National Partridge Wyandotte Club and the international meet of the Rose Comb Black Minorca club, in connection with the show.

The Ohio State Agricultural College exhibit which was particularly appreciated last year, has again been engaged for this year's show. Two new ideas in the awarding of prizes have been adopted by the association. The premium lists will contain the names of the judges for the different classes. Young and old pens will not compete with each other for prizes, but will be judged separately. The different classes will be judged as follows: A. H. Emsch will judge all Wyandottes; J. E. Gault will judge all Leghorns, Minorcas, Andalusians and Langshans; L. A. Stream will judge all Rocks, R. C. Orpingtons, Sussex, Anconas and Cornish; James Simmons will judge Reds, Buckeyes and Rhode Island White, W. G. Minnich will judge all S. C. Orpingtons, Hamburgs, Polish, Houdan and Buttercups; D. D. Whitaker will judge Campines, Bantams and Waterfowls, and J. H. Busch will judge Brahmas, Cochins and Spanish. Premium lists can be procured from Dr R. H. Lindhorst, secretary of the association, Cleveland, Ohio

* * *

The State Cup of the Plymouth Rock Club will be offered at the Indianapolis Fanciers' show, Jan. 10-14, 1916. Special inducements are offered to bring out a big Buff Rock class. Write the club sceretary, Edgar O. Lehman, Goshen, Ind., for application blanks and help make this a record entry by showing there.

* * *

The second annual Federation Show at Stillwater, Okla., under the auspices of the Payne County Branch from January 3 to 8. 1916, now promises to be the greatest show ever held in the Southwest. A special premium of $25 will be given to the exhibitors of the state, outside of Oklahoma, having the best exhibit. The birds will be cooped with Keipper Uniform Coops.

* * *

An elaborate program has been arranged for Wednesday evening at the poultrymen's banquet. Judge Woods will deliver a lecture that evening, his subject being "Pure Bred Poultry on the Farm." Judge Card will deliver a lecture that evening, which will be devoted to correct color and type of various breeds. His lecture will be illustrated with crayon drawings. Exhibitors intending to show at Stillwater are hereby requested to confer with B. A. Ahrens, the secretary.

* * *

The next annual meeting of the Rose Comb Buff Leghorn Club of America will be held at New York December 8, 1915, 2 p. m., in connection with the Palace show. There are many special and silver cups offered. There will also be an election of offcers for the coming year. All are specially urged to attend this meeeting and also to make as large a display as possible. We are specially desirous of bringing out a large class of Rose Comb Buff Leghorns. Fraternally, Howard J. Fisk.

* * *

The Union Poultry Association of Elizabeth and the New Jersey Association for Poultry Improvement, of Plainfield, two of the strongest and most progressive poultry associations in New Jersey, have decided to consolidate, and, under the auspices of the new association, will hold a show at Elizabeth, on December 15, 16, 17 and 18. This show will not be confined to Union county alone, but is open to the world, and with members of both associations entered, as well as any outsider who so desires, a successful show should result. The judges will be Messrs. Cundell, Graham, Punderford and Stanton. William E. Briggs, Albert Street, Plainfield, N. J., is the secretary.

* * *

MINORCA SENSATION AT MADISON SQUARE GARDEN

Largest list of specials ever placed on S. C. Black Minorcas. Three hundred and six dollars ($306.) $201 in cash, $105 in cups. To be offered in connection with the annual meeting of the American Black Minorca Club. Pamphlet giving full information now ready. Send for one. Frank McGrann, secretary, Lancaster, Pa.

* * *

The Delaware County Poultry Association will hold its second annual exhibition in the New Armory building at Media, Pa., January 19 to 22, inclusive. The show will be staged with Empire coops and the secretary, P. G. Platt, of Wallingford, Pa., will be pleased to give you any information desired.

* * *

MEETING OF THE NATIONAL BRONZE TURKEY CLUB

The next annual meeting and club show of the National Bronze Turkey Club will be held at the Great Madison Square Garden Poultry Show, Dec. 31, 1915, to Jan. 5, 1916. The N. B. Turkey Club offers $25 in cash specials, and the M. S. G. Show Association offers $40. For further information write the turkey club secretary and send for the premium list of the big show. These specials besides being the good regular cash prizes of the association should bring out one of the largest classes of Bronze ever shown. Don't forget that a win on turkeys at this show is the best advertisement in America. To compete for the above special cash prizes you must be a member of the N. B. Turkey Club, in good standing, and have your 1915 dues paid. To become a member of the club and be entitled to compete for all the cash specials send $1.00 to Chas. E. Bird, secretary, Meyersdale, Pa.

* * *

WARREN POULTRY AND PET STOCK ASSOCIATION

The fifteenth annual exhibition of the Warren County Poultry and Pet Stock Association will be held at Warren, Pa., January 4, 5, 6, 7 and 8, 1916. They invite the breeders of the world to send their birds here and to take home with them some of the cash cups and specials offered. Chas. T. Cornman, judge. Premium list and information may be had by writing to Myles A. Kirby, secretary, 200 Cayuga Ave., Warren, Pa.

* * *

MADISON SQUARE GARDEN— 27 ANNUAL EXHIBITION

The prospects of one of the largest shows ever held by the association are bright. The following specialty clubs will meet with us:

International Partridge Plymouth Rock Club, Silver Laced Wyandotte Club of America, New York State Meet American Light Brahma Club, American S. C. Black Minorca Club, American Bronze Turkey Club, Golden Penciled Hamburg Club, a new organization to be incorporated at the Garden; American Turbit club, American Barb and Carrier Club, American Jacobin Club, Young Bird Meet, National S. C. Buff Leghorn Club, Special meeting of American Dragoon Club.

Several other poultry and pigeon clubs are now voting and will probably come to the Garden. The list of gold specials this year is approximately $1500 and many of the specialty clubs have raised extremely large amounts, notably the Minorcas, who are giving over $300; the Hamburgs, Silver Laced Wyandottes, Turkeys, &c. The educational program will be the best ever presented and will include an entry which I am saving as a

I've Been Building Incubators So Long that they call me the Daddy of Artificial Incubation

Principal
Not connected with any other company.

When incubators were new I built them so good that

Chas A. Cyphers

my customers of those days are my customers today. From the very first I built the best incubator I knew how. It was the best incubator possible to build. My incubators today are better than they were then because I have learned how to build them better. Today my machines have no equal for hatching a strong, vigorous chick from every hatchable egg, for economy of fuel and labor, for appearance and for durability. And, best of all, for you

THE NEW BUFFALO INCUBATORS

and BROODERS, too

Let me tell you how one customer makes an income of $1,569.89 with a Buffalo Equipment.

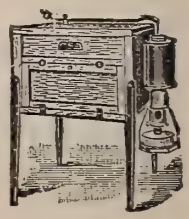
Here's a "human interest" story. Mr. Carter, a carpenter, after a long spell of sickness, that left him almost a cripple, undertook to make a living with poultry.

The fourth year he carried over 550 layers. The market eggs were all sold through a commission house. The yearlings brought 75¢ each. A few hatching eggs were sold. The total receipts were $2,793.07. The total expenditure for the the year was $1,228.18. The net profit on the investment and labor $1,569.89.

Everyone interested in making money out of poultry should ask for our circular.

are just as well built as any Standard Incubator on the market but cost 25% to 33% less. You do not need to pay more than my price for the best incubator your money can buy. You cannot get more real value no matter how much you pay.

The *Buffalo Colony Brooder* is a complete Home Chicken Raiser. Can be operated without shelter when it is 10 degrees below zero.



The *New Buffalo Coal-Heated Brooder Stove and Hover, Price $15,* will brood from 100 to 1,000 chicks for less money than lamp-heated hovers. The *controll* on this stove is perfect, and it requires very little attention.

Write for my circular now before you forget it.

CHAS. A. CYPHERS, Pres.

Buffalo Incubator Company

DEWITT ST. 484 BUFFALO, N. Y.

surprise for visiting exhibitors and for the public. This is a matter of great importance and will be the first time that any show in the country has presented it. Before your readers see this notice the premium lists will have been mailed to a large list of applicants. All those who desire additional premium lists or entry blanks will please communicate with me at Madison Square Garden, where I shall be after December 10, and where I shall have a telephone. Please do not send any communications to Eatontown, but mail them all to Madison Square Garden.

The attention of intending exhibitors is particularly called to the additional and new specials in gold which our Association is offering, we have included this year some general specials not heretofore given and have placed considerable money on varieties which deserve greater recognition. There will be no exhibit of either pet stock or cats, and the association will confine itself, as per its charter, to an exhibition of Standard Bred Poultry and Pigeons.

The secretary is particularly desirous of meeting every single exhibitor and hereby gives notice that the greater portion of his time will be spent upon the floor with these exhibitors and that the latch string of his office door is always out. The attention of exhibitors is also called to the fact that all checks for prize money and specials will be ready, as usual, on the day before we close, and the treasurer will be in his office at all times during the day to deliver these checks to exhibitors. Please call upon him so you can be promptly paid. The exhibitors' room, where all are expected to make themselves at home, will again be in charge of D. Lincoln Orr.

The cooping and uncooping will be in charge of Barney W. Mocher, with an able staff. There will be special stewards in the Bantam Pigeon and Water Fowl departments, who will be at the service of the exhibitors, and you are urged to make extensive use of the Bureau of Information and the system of calling exhibitors from the floor. The secretary hopes to be able to wish a Happy New Year to a larger number of exhibitors than have ever before been present at "America's Leading show." Yours very truly.

Charles D. Cleveland, Secy and Supt.
Address—Madison Square Garden, New York City.

* * *

The Blue Orpington Club will hold its meeting at the Boston Poultry Show on Thursday of the show week at 11 o'clock. The Blue Orpington club officers extend a cordial welcome to all interested. Write Secretary Boston Show for premium list.

The Blue Orpington Club will also hold a state meet at the North Jersey Show at Newton, N. J. The Blue Orpington Club also offers here four handsome specialty ribbons. We are also giving a cup at this state meet through the kindness of J. F. Roe. Anybody interested in showing at this state meet please write to J. F. Roe, Lafayette, N. J., state secretary Blue Orpington club. The Blue Orpington Club is offering specialty ribbons to the following shows: Madison Square Garden, Chicago, Springfield, the Orpington Club of Canada, St Albans Show, Derry and Monmouth Poultry Club. Will publish from time to time other shows where we are giving specialty ribbons. Anybody wishing to join the Blue Orpington Club, send to Grace Nicholson, Secy-Treas. Blue Orpington Club, Leominster, Mass.

* *

The North Shore Poultry Association will hold its annual exhibit at Beverly, Mass., Dec. 14-16, 1915. Liberal cash and special prizes offered. Judges are F. G. Cook, A. G. Duston and D. P. Shove. Address, H. P. McKean, Jr., Secretary.

* * *

THE BIG BOSTON SHOW

The Boston show premium list of over 100 pages will be in the mail December 1 The regular and special prizes amount to several thousands of dollars. The usual handsome challenge cups will be up for competition and the beautiful Houdlette trophy comes up for its second competition for best cock, hen, cockerel and pullet of Silver Wyandottes. The club meets already schduled for Boston are:

The Waterfowl Club of America, the Massachusetts State meet of the American Light Brahma Club, the Massachusetts State meet of the American Houdan Club, the N. E. Golden Wyandotte Club, The Blue Orpington Club, the National American Dominique Club, the Hamburg Fanciers Club, the N. E. Bantam Club, the N. E. Turkey Club, the American Pigeon Club, the American Jacobin Club, the American Pigmy Pouter Association, the American Tumbler Club, the Exhibition Homer Club, the Oriental Frill Club, the Massachusetts Fur Fanciers Association.

Tempting prizes are also offered in utility division. The prizes on dressed poultry are $20, $15, and $10 for six birds and for eggs, $10, $8 and $5. Never has there been such a demand for premium lists from all over the country and the Big Show promises to beat its own great record. Exhibitors are requested to forward entries as early as possible so that the office will not be swamped on the closing day. W. B. Atherton, Sec'y.

* * *

White Plymouth Rock Admirers:

The growth and advancement of the American White Plymouth Rock Club is a happy occurrence to every true White Plymouth Rock breeder. This club is one of the younger clubs, being in existence only a little more than two years. Nevertheless this fact has not hindered the enthusiastic boosters and their energetic secretary, M. L. Chapman, Brown's Mills, N. J., from carrying out the ideas and purposes for which specialty clubs are organized .A glance at the premium lists from all sections will show the fact that the special club ribbons are offered throughout the country. Any show secretary who as yet has not received the offer of the American White Plymouth Rock Club for his show should at once write the secretary and get his share of the special prizes. Then, too, the American White Plymouth Rock club has selected one of the greatest shows of the country for its annual meeting place, namely; The Colsieum Chicago Show. The business meeting will be held at Lexington Hotel, Michigan Blvd., and 22nd Street, on December 13 at 10 A. M. All members should plan to attend the meeting and be sure to bring your best birds. The exhibition will, without doubt, be the greatest ever caged. Its prospects are that it will eclipse all former meeting. In addition to the regular cash prizes there are many specials offered including a handsome silver cup for champion male and a handsome silver cup for champion female. A fifth prize at this strong club show is certainly a very strong advertising asset. Do not fail to be there. Give your birds an opportunity of proving their quality. At the meeting the matter of the Year Book will also be taken up as the officers plan to get same out the first of the year. Let us White Plymouth Rock Breeders boost in the right spirit and see to it that our favorites get their just dues. If not a member send $1.00 to M. L. Chapman, Sec., Dept. B2, Brown's Mills, N. J., at once.

ADVANCE WINNINGS

Of Everybodys Poultry Magazine Advertisers at the San Francisco Exhibition

Under date of November 22nd, we received a wire from W. D. Holterman, Box V., Fort Wayne, Ind., informing us that an Aristocrat Barred Rock Cockerel, sold by him to Cameron Bros., of Sacramento, Calif., had won the coveted first prize at the great San Francisco Fair. This bird is a son of "Ringy Wonder" and Mr. Holterman writes us under later date that he shipped this bird to Messrs. Cameron Bros., on November 6th, also stating that he has on hand over 500 exhibition Cockerels, many of them even better than the World's Fair winner. In Mr. Holterman's characteristic fair dealing with his customers, he first asked permission of Messrs. Cameron, before he gave this news to Everbodys readers. We congratulate Mr. Holterman on producing such quality and the Barred Rock fanciers in general, that such stock is available.

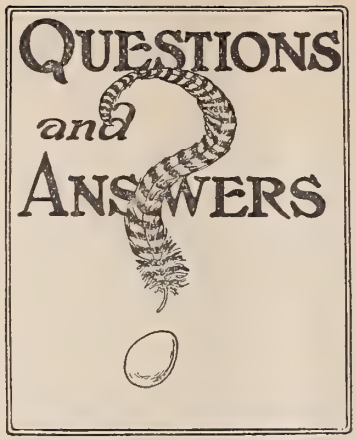
INCUBATOR MAN WANTED

We would be pleased to enter into correspondence with a first-class incubator man, to operate a 12,000 egg capacity proposition. He must have the best of reference and thoroughly understand the management of a duck farm, where 700 White Pekins are kept. A fine position for the right man. Write Everybodys, Hanover, Pa.

Westmoreland Chemical and Color Co., 925 Chestnut St., Philadelphia, Pa., desires our readers to send 25 cents for an ounce bottle of "Fer-Sul," which is an odorless disinfectant, deodorizer and antiseptic. On request they will be pleased to send their booklet containing "worth while" testimonials that they have received from enthusiastic users of "Fer-Sul." When sending for a trial bottle of Eer-Sul" kindly mention Everybodys.

WILL YOU DO THIS?

When writing advertisers, mention "Everybodys." Thanks.



In this department we will answer questions pertaining to poultry. When special information in regard to diseases, etc., is desired, same will be furnished by mail to avoid delay. Ask your questions, let us help you.

Q—I have some R. I. Red pullets which I notice have a froth running from the corner of their eyes. At first I thought it came from picking one another, but more seem to be effected now. Tell me what to do in this case. Conshokocken, Pa., J. C.

A—Take away those which are effected, and keep them apart from the others. This may be the first symptoms of Roup, which always starts in this manner. Look over the columns of this month's Everybodys and purchase a remedy for colds and Roup, as well as writing the manufacturers for their literature on this dread desease. Taking in time, you can prevent serious contagion.

* * *

Q—Please tell me through the columns of your Magazine the best carton to ship eggs by Parcels Post, and where I can get them. Columbia, Texas, C. H. W.

A—It is very important to use the right kind of cartons for the shipment of both eggs for market as well as those for hatching purposes. The manufacturers have recognized this, and we have on the market today several perfected cartons. Read the advertisements of these manufacturers in this months' Everybodys and write them for their catalogues describing same, which will be willingly mailed you free.

* * *

Q—What dates are the Madison Square Garden Show this year. Sunbury, Pa. H. E. R.

A—December 31st to January 5th. You will find all the dates of the Winter shows which have been returned us on another page of this issue.

* * *

Editors Note—Owing to the large amount of matter contained in this December issue, we have found it necessary to hold over until January a number of letters for this department. These with others will appear in that issue.

Everybodys Christmas Cover

Does not our Christmas cover suggest that Bantams would be appreciated gifts for the boys and girls? Where is there a child (or grown up for that matter) who would not appreciate as a Christmas Gift, a pair of these midgets of the Poultry World?

The artist, Leonard Karl Stahmer, was undoubtedly prompted by this thought when he conceived the cover we present you this month, and in a suggestive way shows the delight of the children and the pleasure afforded the mother, in the possession of a beautiful pair of Bantam pets.

In the cover designs we will present you from month to month, we hope to always attract and interest our readers, making "Everybodys" a welcome addition to the library table.

The Mirimichi Poultry Farm, Box A., Foxboro, Mass., with one string at San Francisco Exhibition amused themselves by winning a goodly number of the 1st and 2nds on their three varieties at the Attleboro Mass., Show, week of November 16th, as is shown by the following.

Single Comb R. I. Reds. 1st, 4th Cockerel, 2nd, 6th Pullet, 2nd 5th Hen, 5th, 6th Cock, Best display. White Wyandottes, 1st, 2nd Cock Color Special, 2nd, 3rd Hen, 2nd, 3rd Cockerel, 2nd Pullet. Best display. White Rocks, 1st, 2nd Cock Color Special, 1st, 2nd Hen Shape and color, 1st, 2nd Cockerel Shape Special 3rd Pullet, 1st Pen. Best display.

Oat Sprouter $2

For $2.00 you can build the simplest, most efficient, easiest to operate and very best oat-sprouter ever constructed. A boy can make one in an evening with no tools but a saw and hammer. Cost of operation for a 40-hen size less than 7c a month. There are thousands in successful operation. Plans with plain directions for building, 25c postpaid.

I. PUTNAM, Route 115 ELMIRA, N. Y.

RAISE BELGIAN HARES Beat poultry 5 to 1 for profit. Less work, less loss, less room, more attractive. Constant demand. We show how. Our booklet, "Profitable Hare Culture" sent FREE. American Hare Co., Dept. B, Pennington, N. J. (84)

A WONDERFUL RECORD

On Sunday, Oct. 31st, Lady Eglantine, the remarkable White Leghorn pullet, belonging to A. A. Christian, of Philadelphia, was carried in State by a high powered automobile to the plant where she was hatched, at Greensboro, Md.

Perhaps never in the World's history of egg records, has so much prominence been given an achievement as has been given "Lady Eglantine," who the records show produced 314 eggs in 365 consecutive days at the N. A. Egg Laying Contest.

During the first week she laid 4 eggs. Then she dallied along at the rate of 5 or 6 eggs a week until the week of January 2, when she laid 7 eggs. It is interesting to consider that this was in the dead of winter, when eggs were selling at 45 cents a dozen. While the snows were falling and the Delaware streams were coated with ice in January and February and the barnyard chickens had gone out of business, Lady Eglantine was turning loose with 4 or 5 or 6 eggs every week.

From March 13 to April 17 the hen laid 35 eggs in 35 days, and from that time on she seemed to have settled down to real business, for up to October 9 she did not drop below 6 eggs per week, save for one week. Frequently she laid 7 eggs a week.

Fall began to have its effects upon Lady Eglantine; nature called to her to put on a new coat of winter feathers and she slowed up slightly. That is why during the last three weeks Lady Eglantine averaged only 5 eggs a week.

Of course she will not quit laying now that the competition is ended, but she will continue to slow down until she regains her full winter coat, and then, after a rest she will renew her strength for the reproductive season of spring.

Arlington, N. Y.,
Oct. 18, 1915

H. I. Co., Salem, Va.

Dear Sirs:—

Last May for some unknown reason or cause, my flock of White Leghorns began to stop laying, gave them poultry tonics, still they kept laying less until 13 eggs a day was reached At that point, I treated them with "OCULUM." In a few days an increase of eggs until 90 per day was reached. This was with the same feed as before. What the trouble was, I don't know. "OCULUM" brought results. Find enclosed $3.00 for more

R. R. SLEIGHT,
Arlington, N. Y.

Look up the "OCULUM" ad in this Journal and try "OCULUM." Its reputation is steadily growing. Trial bottle only costs 10c.

We Can Interest You— Poultry Show Managers

by the prices we will submit to you on the printing of your Premium Lists and Catalogues.

Your work will be handled by men familiar with the "in and outs" of Poultry Printing. In other words mechanics who know the difference between a gander and a goose.

Let us tell you what we can print that Premium List for anyway.

Address, JOB DEPT., "EVERYBODYS," HANOVER, PA.

BREEDING BANTAMS

Breeding Bantams is a business
Which will test the strongest mind;
But it's pleasure to the breeder,
To progress—improve his kind.
Just to take a breed of Bantams,
And endeavor to keep them true,
Is a work for any master,
But greater still, 'tis to win the Blue.
There are styles of many numbers,
To meet the fancy of mankind,
And the most particular person,
Can, by hunting, the right kind find.
When you journey to your cottage,
After strenuous work is o'er,
You'll be filled with joy and pleasure,
Among your Bantams to pass an hour.
You will find good compensation,
For the study, feed and care,
And their growth is inspiration,
Reviving spirits, o'er you're aware.
For your birds are ever changing,
And to keep them small and fine,
Takes a person of skill and patience
Who is not afraid of time.
And in closing let me caution,
That in breeding Bantam Beauties
You must know the why and wherefore,
And fulfill all needed duties.

A. F. Caulkins.

A FREE COPY OF CYPHERS COMPANY'S

Great 1916 Year Book Now Ready For You.

An annual event for which poultrymen regularly wait, before completing their plans for the new year's work with poultry, is the arrival of Cyphers Incubator Company's Annual Year-Book or Catalogue. We are glad to be able to announce now that the Year-Book for 1916 is ready for mailing. The title of this big, illustrated volume of 172 pages, 7¼x10 inches in size, is "The Profits in Poultry Keeping."

Notwithstanding the great cost of printing and mailing this valuable book, the Cyphers Company continues its liberal policy of sending free copies to all who write asking for it. We want every one of our readers who is in any way interested in the poultry business to write at once for a copy of this Year-Book. You could well afford to pay for it; as a gift you certainly cannot afford to neglect asking for it

This year-Book describes a complete high-grade line of incubators, brooders, laboratory products, poultry goods and supplies, and all will be pleased to note the very favorable prics quoted. This year there are some particularly intersting announcements that every poultry raiser will want to read.

The Cyphers Company has always stood four-square on the subject of highest quality of material and workmanship, and it demands the highest possible practical value in all that it offers for sale. The Standard Cyphers Incubator holds an enviable place in the esteem of poultrymen the world over, and we are pleased to learn that the two new low-priced incubator models—the Columbia hot-air, and the Superior hot-water, introduced last year, also have met with an enthusiastic welcome.

In our opinion the Cyphers Company has rendered poultrymen a real service in introducing these low-priced machines—proving that it is possible to put good, thoroughly reliable hatchers on the market at a price so low that every one who keeps fowls, no matter on how small a scale, can afford to buy.

The annual open letter from President Grant M. Curtis, always inspiring, helpful and pace-making in its tone, is relied upon by thousands of poultrymen as a careful and conservative, but always optimistic, analysis of the year's prospects in the poultry world.

We particularly want our readers to learn about the Cyphers Company's truly helpful Service Department fully described in the Year-Book. This department is maintained solely to give practical advice and assistance to poultry raisers—not only Cyphers customers, but every one who needs help in making a success with poultry. There is a "Personal Letter Service" capably manned, which answers inquiries directly by letter, and there is no question about the fact that it has proved of incalculable benefit to thousands who have had special problems or difficulties to meet.

The Cyphers "Service" Department has prepared a comprehensive series of bulletins dealing with many problems of practical poultry work, and additional bulletins are in course of preparation at the present time. The Company also issues several booklets on feeding, brooding and general care of fowls. The 1916 Year-Book tells all about this helpful literature and how it may be secured free of charge by any one.

We personally urge every reader to send at once for his or her copy of this great Year-Book and to give it a careful reading. Do not forget to mention this journal. When writing, address Cyphers Incubator Company, Department 174-W, Buffalo, New York, Boston, Mass.; New York City; New York; Chicago, Ill.; Kansas City, Mo., Dallas, Texas; or Oakland, Cal.

BUFF ORPINGTON BREEDERS BEWARE!

I have just received a circular from England in which S. H. Jacks, West Didsbury, England, claims he sold me Buff Orpingtons that won all of my prizes at Pittsburgh in January, 1914. I have a letter from Mr. Jacks in which he claims my winning birds at Madison Square Garden were also his.

Th facts of the case are that I have never exhibited a bird sent me by Mr. Jacks. During several years at periodic intervals he sent to Owen Farms some very good Buff feathers and quoted comparatively moderate prices on the birds. In the fall of 1913 I decided to import some Buff Orpingtons to start another family of new blood in my yards and I concluded I would give Mr. Jacks the order on account of the extremely glowing descriptions of birds which he said he could send me.

In due course the birds arrived, miserably cooped, and there was not a decent specimen in the entire lot, with the exception of one hen four or five years old. She of course had passed fullness. The cock and cockerel that were to be real stars had white in neck, had white at base of tail, the cock bird was a very small Wyandotty shaped bird and the cockerel had very little Orpington type. I wrote Mr. Jacks and offered to return the birds for just half the price that I had paid him, telling him that my loss would be considerable less in this way than to market the birds for what they were worth and that not one specimen was fit to go into my breeding pens. Mr. Jacks either knows nothing about a Buff Orpington or is absolutely unprincipled, and he refused my proposition.

Every one of my Pittsburgh Show string was bred and raised on my own farm.

I never cry over spilt milk and I accepted my medicine, but I consider it only fair to warn my brother breeders in America not to buy of Mr. Jacks, as apparently he is making a campaign through the mails of the American Orpington breeders, soliciting business on my winnings and I will repeat that NOT ONE BIRD THAT MR. JACKS SENT ME WAS EVER EXHIBITED, NOR WAS ONE BIRD PLACED IN MY BREEDING PENS.

Mr. Jacks knows these facts perfectly, as I have written them to him in very emphatic language, and his circular is the most fraudulent misstatement of facts that I have ever seen.

Fraternally yours,
MAURICE F. DELANO

OWEN FARMS.

STAR REMEDY COMPANY
WASHINGTON, D. C.

We are pleased to call our readers attention to the advertisement on another page of this issue of Golden and Company, Washington, D. C., Sales Agents for the Star Remedies, and would also state their Poultry Remedy and Food Department is under the personal management of George E. Howard, the well-known poultry expert and authority on all matters pertaining to the poultry industry. Mr. Howard has had considerable experience with poultry culture and was editor and publisher of The Feather, and is the author of many books and other literature relating to poultry, pigeons and kindred subjects.

He was the author of the first bulletin on poultry, published by the U. S. Department of Agriculture. He has contributed numerous special articles to various publications in this country and abroad, and personally planned, published, and conjointly wrote the text of the "Perfected Poultry of America," which has been universally recognized as next to the "Standard of Perfection." His book the "American Fanciers' Poultry Book," has proven a popular one and a large seller.

Mr. Howard was the publisher of "The Diseases of Poultry," by the late Dr. D. E. Salmon, which is recognized as the textbook of the world on poultry diseases and their treatments. His work with Dr. Salmon on diseases of poultry has been carefully followed to date, and the knowledge thus gained is the basis for the formulas under which the Star Poultry Remedies and Foods are manufactured. Mr. Howard is President and General Manager of the Star Remedy Company, the manufacturers of this line of specialties.

Mr. Howard has also been active in many organizations devoted to poultry and pigeons and was for years Secretary and Superintendent of the large shows held in Washington in former years. He has been a life member of the American Poultry Association for nineteen years, and enjoys a wide circle of friends whose ambitions and desires are for the advancement of the American hen in her most prosperous state. The personal services of Mr. Howard and his assistants are cheerfully given to those who may desire same, and we are pleased to recommend the Star Remedy products to our readers and know that Mr. Howard will give every attention to your orders. Write them for their literature, describing their various remedies, as well as giving you valuable information which is of great value to every Poultry Keeper. Address them Star Remedy Company, Washington, D. C. Mention Everybodys.

MIRIMICHI POULTRY FARM,
Box A, Foxboro, Mass.

Close on the announcement of a wonderful win at the Attleboro, Mass., Show, where this well known farm made a great record on S. C. Reds, White Wyandottes and White Plymouth Rocks, we have a letter from owner W. H. Saart, stating that on eleven S. C. Rhode Island Reds, entered at the San Francisco exhibition, namely:—Two cockerels, two pullets, one cock, one hen and one pen, they won 1st cock, 7th hen, 1st and 2nd pullet and 3rd pen. Truly a wonderful achievement, showing the general excellence of their line. Mr. Saart informs us that he has hundreds of birds now ready to ship for any show. This their latest winning was an accomplishment made possible by the knowledge of breeding, put into effect on the Mirimichi plant. Eleven birds entered, nine placed, and three of these worthy of a blue ribbon, certainly is an achievement seldom equalled at a World's Fair Poultry Show.

BROOKLYN, N. Y. WINNING BLACK ORPINGTONS

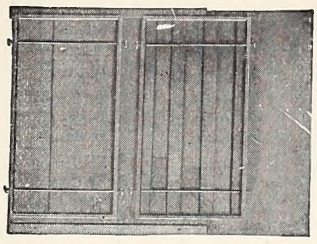
They won at Brooklyn—First and Third Hens; First and Second Cockerels; First and Second Pullets. Best display. Spratt's Cup for best Cockerel, Etc. Also winners at N. Y. State Fair, Mineola, Etc. Stock for sale. Eggs in season. Write us your wants for prices, will please you. Address,
SILAS H. ANDREWS, BOX E, MINEOLA, N. Y.

IMPERIAL BLUE ORPINGTONS

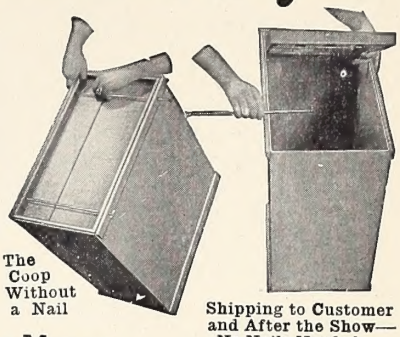
Bred for the past four years for true blue color, size, winter egg-production and early maturity. Consistent winners at such shows as Allentown, Easton, Trenton, etc.
HILLSIDE FARM : J. S. Roe, Propr. : LAFAYETTE, N. J.

Use These Coops—Save Money

The very fact that the express companies have put Andrew's Efficiency Coops in the same classification rates as wooden coops is proof of their strength, security and rigid qualities. Yet they are light enough to reduce express charges 50%. Use these coops yourself. See that all birds shipped to you are in "the coop without a nail" and thus save on expressage.



As It Comes To You



The Coop Without a Nail

Shipping to Customer and After the Show—No Nails Needed.

Andrews' Efficiency Koops

Save Money on Freight
